THE

CLASSICAL JOURNAL

NO. XXXI.

FOR SEPTEMBER, 1817.

The Literary and Scientific Pursuits which are encouraged and enforced in the University of Cambridge, briefly described and vindicated. With various Notes.

BY THE REV. LATHAM WAINEWRIGHT, A.M. F. A.S. Of Emmanuel College, in that University, and Rector of Great Brickhill, Bucks.

Πολλον δ' ἰφθιμοισι δεδώρηται βασιλεῦσι, Πολλον δε πτολίεσσι, πολον δ' ἀγαθοῖσιν εταίροις. Theoc. Idyll. 17. v. 110.

MEMBERS of the English Universities, and attached to their institutions and principles, we hail with pleasure every publication, which tends to inform the public of their pursuits and advantages. We cannot better express our opinion of those establishments, than by quoting the words of a writer, whose experience enables him to form a proper judgment:

"Of all national Establishments formed by Piety and dedicated to Wisdom, none can, in the opinion of one who trusts he is not a slave to early prejudices, be compared to the Universities. They exhibit a system, the beneficial effects of which have not been decreased by NO. XXXI. Cl. Jl. VOL. XVI.

the gradual relaxation of the original austerities of its foundation: these have been succeeded by a maily liberality, and by the rational cultivation of a more enlarged plan of literary purpuit, inculcated without that severity which hardens, and embraced without that servility which degrades, the human mind. The excellence of these Establishments does not depend on the decision of the question respecting particular modes of instruction in some technical branches of study, in the defence of which a member of the University of Oxford has lately displayed a sagacity and information, worthy the importance of his subject: we may even admit the possibility of further improvements in these seats of learning. That question considers these Establishments only in a literary point of view. But we will suppose a young man, who enters the University without being a candidate for Academical honors, or a claimant of Academical degrees. These are indeed professional advantages; but gratifying as they are, they are surpassed by the moral and civil benefits, which he may reap from a residence at Oxford or Cambridge. He will acquire a habit of associating with the heirs of the first families in the Kingdom; he will learn to respect the venerable Establishments of the Church and State; to love the constitution of his country, and revere the religion of his Fathers. Though he may not himself be fond of application, he will profit by the conversation of the studious and contemplative; his mind will expand to the rays of genius, his taste will be refined, and his judgment matured. He will, by unitial communication, imbibe sentiments of generosity, of every Emig that is amiable in disposition, virtuous in principle, and bene-By collision with others, he will wear off the ficent in practice. asperities of unreflecting presumption, and of local prejudice. He is placed in the path, which leads to all that is good and great in private and in public life. From an English University, he will derive those principles of patriotism, of morality, of religion, and of general conduct, which will enable him to perform, with private credit and public ntility, the part of the most honorable and beneficent character in the world,—an English gentleman." *

We have, in our former Numbers, inserted an account and a defence of the course of studies pursued at Oxford.² Mr. Wainewright, in this publication, conveys a clear and satisfactory description of the literary and scientific pursuits of Cambridge, delivered in elegant and nervous style.

In conformity to the nature of this Journal, we shall confine ourselves to a quotation on the *Classical* studies of that University; containing an answer to those, who represent its institutions as confined to Mathematical objects:

"It has been often asserted, but has never yet been proved, that

Appendix to Dr. Vally's Servions, 2 Vols. 2 No. AH. p. 305.

classical literature, so far from experiencing proper encouragement at Cambridge, is both despised and neglected; and it has been falsely imagined, that he who there aspires to academical distinction, must relinquish the fairy haunts of the Muses, and for ever renounce the society of the poets, the orators, and the sages of Greece and Rome, who had been the companions of his earlier days, and were destined, he had hoped, to contribute to the comfort of his maturer years. We have ample reason, however, to congratulate ourselves upon possessing a system of education, as commelensive as it is strict and accurate, and which at once excludes a supposition not less erroneous than it is degrading. Whilst the student pursues the sublimities, and ascends with perseverance the craggy precipices of modern science. he neglects not to analyze the beauties and to trace the paths of ancient literature. The true state of the case is, that classical lectures take place in every college throughout that part of each term which requires residence, and uniform attendance is enforced with a proper degree of strictness. Those anthors are selected which afford most scope for critical remark, and which at the same time are distinguished by a display of the higher beauties of sentiment and composition. The finest plays of the Greek Tragedians, Plato's Dialogues, the Histories of Herodotus and Thucydides, Aristotle's Poetics, Cicero's philosophical works, and the two treatises of Tacitus, might be enumerated as some of the more usual of the writings of antiquity chosen for this purpose. The advantages on these occasions do not consist merely in calling upon the student to explain the text of the author then in use, but principally in the opportunity afforded of hearing the criticisms of a learned and judicions preceptor, who, in addition to the result of his own researches, can frequently avail himself of manuscript observations not generally accessible. By this means it happens, that scarcely any striking beauties of expression, peculiarities of structure, or niceties of prosody, are suffered to escape the attention of his hearers.

Another instance, in proof of the attention which is required to classical pursuits, is afforded in the examination for the several scholarships attached to every college, in which, with a few exceptions, a proficiency in Greek and Latin is considered as more essential than skill in mathematics. The stipends annexed to these scholarships indeed are, generally speaking, but small, but still they are found by experience to be amply sufficient to attract competitors, and to create emulation. Nor must we omit to enumerate amongst these incitements, the excellent institution of college prizes. Once or twice in the week, during term, according to the magnitude of the college, a particular day is appointed for the public delivery of two declamations by the undergraduates in rotation, to be composed in Latin and English alternately every year. By taking opposite sides of the question fixed upon for discussion, a greater degree of exertion is naturally required, the reasoning faculty is more vigorously excited. and a comparison between the different claimants is more easily effected. Nothing, in truth, can be spore gratifying than to listen to these effusions of youthful genius, destined, perhaps, at some future period, to instruct mankind in wisdom, or to influence their actions

by the powers of eloquence.

To this more private made of encouraging the pursuit of classical literature, I must not reglect to add the public prizes and scholarships instituted for the same purpose, and which, by being onen to general competition, afford a more trying scene to the efforts of literary ambition, and are on that account frequently more productive of meritorions exertion. Among the foremost of these are the three medals. which, in conformity with the will of Sir William Browne, are annually distributed to such undergraduates as prove themselves to be the successful claimants, by the following compositions: 1st, The best Greek ode in unitation of Sappho; 2dly, The best Latin ode in imitation of Horace; 3dly, The best Greek a d Latin epigrams of which the Anthologia and Martial are to be considered as the models. They are afterwards recited by the successful candidates in the Senate House, before the members of the University, and a unmerous assembly of There are also two medals annually given by the Chancellar of the University, to the two hest proficients in classical literation amongst those who have just obtained their first degree. In the present instance there is an excellent regulation—that no one shall become a candidate for these prizes, unless be was included in the two first classes of honors when he was admitted a graduate. Λ third medal Las been added by the present Chancellor, the Duke of Gloucester, which is annually conferred upon the undergraduate who shall be adjudged to be the aidhor of the best English poem, composed either on the lyric or the beroic measure.

The next prizes, which perit the attention of persons unacquainted with the system at Cambridge, are those which are given by the representatives in Parliament of this University, to the authors of the four best Latin prose dissertations; and as they are confined to those who have taken their first degree, they contribute to remove the objection which has sometimes been made, that when once a student becomes a graduate, all farther incentive to exertion ceases to exist. The same observation is applicable to the Seatonium prize, for the best English poem on a sacred subject, which is restricted to Masters of Arts."

Our author is naturally partial to his own University, and perhaps not perfectly acquainted with every part of the plan of Oxford. Thus he says:

"In the enumeration of advantages possessed by the undergraduates of this University, I ought to have mentioned one, which appears to have little or no existence at Oxford—the liberal use of the noble libraries, which add so much to the dignity and reputation of the place. Besides the privilege of access to the library attached to his own college, every student has the power of harrowing ten volumes at one time, from the public or University library, by procuring a note from some resident Maston of Arts. This fine collection, con-

sisting of nearly one hundred thousand volumes, comprehends not only the accumulated remains of ancient learning, but almost every modern work of any value or celebrity. The Bodleian, on the contrary, is completely inaccessible to the undergraduates at Oxford; and even to those members of the University who possess the liberty of resorting to this splendid library, the value of the privilege is much dimmished by the singular regulation which prohibits the removal of every book, without distinction, beyond the walls of the building."

The superiority of the Bodleian to every other library in the kingdem must be granted. If a scrupulous attention to the treasures, which it contains, induces its Curators to forbid the removal of the books, private rooms, with fires and every convenience, are provided for the use of the members of the University, who may send for any books, which they may have occasion to peruse. Undergraduates, who wish to have access to the fibrary, are admitted, by a dispensation obtained at a trifling expense, to the free use of all the books.

The liberal rivalship between the two Universities has produced the most beneficial effects. This extends not only to the two great bodies, but to the colleges of each. Those in which the strictest discipline, and the greatest attention to literary proficiency are observed, are so crowded with applications, that in Oxford it is often necessary to secure rooms several years before admission. In this respect we are compelled to give the preference to the practice of this University. No students are admitted in any college inless they can be accommodated with rooms within its walls; but as soon as they have taken their degrees they are sent into lodgings. Cambridge no students, properly qualified, are demed admittance on the boards and to the college lectures; but they must sleep in the town, perhaps for some years, until vacancies permit them to be indulged with rooms, which they keep sometimes as leng as they please. The difference in point of moral security is striking.

We do not hesitate to assert that the present examinations for degrees in Oxford deserve the attention of the sister University. In Cambridge a student may obtain the highest honors in his degree of B. A. by Mathematics alone, with a very slender share of classical attainments. In Oxford honors are conferred on classical ment without mathematics; and a separate branch of lained is prepared for those who distinguish themselves in mathematical pursuits. We are sensible of the advantage of mathematical learning; although we do not rest the powers of reasoning, and the niceties of discrimination, exclusively upon it; still less do we follow the celebrated BARROW

in his assertion that it will make a man honest and good. But we wish to recommend to the consideration of the heads of Cambridge, whether a proficiency in the classics should not be comprehended in the requisites for an honorable degree. In this examination, and in that for scholarships and fellowships, a viva voce construction of the classical authors should be more frequently adopted in Cambridge; and the mode of written exercises in prose and verse, in Greek, Latin, and English, should form a more considerable part of an Oxford examination. But when we consider the gradual and constant improvements in both Universities; when we recollect that the proportion of knowledge, which formerly intitled a young man to the first rank of honors, would at present scarcely secure the second or third; when we behold the influence, which these increasing advances to hterary enimence have on our public schools, and on the other Universities of the United Kingdom, and even on those of the Contiuent, we shall hail with confidence the hope that the rising generation will come into the world with increased qualifications to adorn it by their learning, improve it by their example, and enlighten it by their Friends as we must be to the Church of Eugland, and highly as we think of the knowledge and zeal of its present professors, we can not but congratulate the members of that Establishment on the means of 'support, which its principles, its doctrines, and its practice, will derive from the improving systems of its illustrious nurseries, the UNIVER-SITIES OF OXFORD and CAMBRIDGE.

VINDICIÆ ANTIQUÆ.

No. I.

Towards the close of the seventeenth century, Sir William Temple justly observed, "that whoever converses much among the old books, will be something hard to please among the new." He assigned as the causes of the decay of learning in his time, "the want or decay of ravoi in great Kings and Princes to applied it—the employment of our nobility in arms and conquest—that of our clergy in their devotions, and controverses—of our middle ranks in the pursuits of wealth—and of the lower ranks in toil, to procure the means of subsistence."—"The vein of ridiculing all that is serious and good, all honor and virtue, as well as learning and piety, is the itch of our age and climate, and has

We have reason to believe that the University Scholarships are on the point of being decided in Oxford by a public examination, as they are in Cambridge. In the Craven Scholarship this has been the case in the present

overrun both the court and the stage, enters a house of Lords and Commons as boldly as a Coffee-house, debates of Commons as well as private conversation; and I have known in my life more than one or two Ministers of State, that would rather have said a witty, thing, than done a wise one; and made a company laugh, rather than the kingdom rejoice: but this is enough to excuse the imperfections of learning in our age." The worthy Baronet, himself an excellent scholar, agrees in opinion with Alphonsus surnamed the wise, King of Arragon; "That among so many things as are by Men possessed, or pursued in the course of their Lires, all the rest are baubles, besides old wood to burn, old wine to drink, old friends to converse with, and old Books to read."

At the time Sir William Temple made these observations, ancient learning was indeed fast declining: but in our times, although we still read the poets and historians of antient Greece, the very memory of their philosophy is almost forgotten; and, in some of our Universities, students are taught to ridicule what their masters do not understand, as mintelligible.

The writer of the second introductory essay to the supplement to the Encyclopædia Britannica, in setting forth the excellence of modern philosophy and improvements in science, condemns the system of antient physics as worthless, and says that "Aristotle's definition of motion is highly characteristic of the vagueness and obscurity of his physical speculations. He calls motion the act of a being in power, as far as in power, words to which it is impossible that any distinct idea can ever have been annexed."—" Epicurus," he soon after adds, "defined it to be change of place, which is no doubt the simplest and best definition that can be given."—" The properties, or as they are called, the laws of motion, cannot be derived from mere definition; they must be sought for in experience and observation, and are not to be found without a diligent comparison, and scripulous examination of facts."

The definitions of Aristotle were for many ages admired, as models of express and admirable exactness; and certain it is that no philosopher of any age has taken more pains to render his definitions clear, for he frequently subjoins illustrations to point out distinctly the meaning of the words employed, and their import in combination, and this scrupulous attention to accurate definition pervades the whole writings of Aristotle. That of motion he admits to be very difficult; for change of place, in the common acceptation of the words, he holds to be but one species of motion, which he gives as the last of

six enumerated; and accordingly he takes great pains to define it as exactly as i ossible: for he observes that without motion no change takes place in the universe.—He characterises the definition of time as equally difficult; and although he at first briefly calls it $\kappa\iota\nu\dot{\eta}\sigma\epsilon\sigma$ double the measure of motion, he fully explains in the sequel the fleeting nature of time, and the extreme difficulty of forming a notion of time present, as, every instant, the past is for ever gone, and the future hath not yet arrived.

In order to form a correct estimate of the merit of the definition of motion, which to Professor Playfair appears so irrational, we must have recourse to the language in which it is given, and allow to Aristotle that to which every author is entitled, to explain his own meaning.

The definition occurs near the beginning of the third Book, de Natura, where, after stating the necessity of acquiring distinct ideas of Motion before we proceed to the study of nature, he says, Διηρημένου δέ, καθ΄ ἔκαστον γένος, τοῦ μὲν ἐντελεχεία, τοῦ δὲ δυναμει, ·· ἡ τοῦ δυνάμει ὁντος ἐντελέχεια, ἢ τοιοῦτον, κίνησες ἐστεν. In this definition it is necessary first to ascertain the true import of the words employed, in their usual acceptation; and then to consider the definition as illustrated by the context.

Theredexem is a word said to have been invented by Aristotle, to express more accurately than any single word in the Greek language enabled him to do, the tendency to perfection of the capacity of passive matter, and the energy of active powers. The word is altered from the Συντελέχεια of the antient Pythagoreans, and is more expressive, because the Έν denotes that the tendency to perfection, or the accomplishment of an end, is actually resident in the being of which it is predicated. A block of marble may be converted into a fine statue, and the statue is then the ἐντελέχεια of the passive marble, while the labor of the artist is the ἐντελέχεια of his active power, an energy directed to the perfection or complete formation of a statue, the type of which already exists in his mind. But here we must observe that the antient philosophers allowed no perfection strictly so called to works of art. The happiest efforts of their artists they held to be incomplete,

It is true that Lucian in his Δική φωρηέντων introduces the letter Δ as complaining that it has most innuarrantably been deprived of its έντελεχεια, formerly ενδεντια, but there appears no reason to believe that the word was ever no spelt in fact. 'Ακούττε, μωνήεντα δικασταί, τοῦ μὲν Δ λίγοντας, ἀφιλιτό μου τὴν ΈΝΔΕ ΔΕΧΕΙΑΝ, ἐντελέχτιαν ἀξιούν λίγισθαι πυρὰ πάντας τιψές νόμους.

and these artists themselves inscribing their names on their best productions always used the imperfect; denoting that they had been employed in the work, but by no means had been able to bring it to perfection. Thus the makers of musical instruments, lowever well they may have succeeded, do not call their work complete, but each uses the word "faciebat," thus modestly leaving the value of their performances to be determined by others. When therefore we speak of the έγτελέχεια Δυνάμεος as applied to passive matter—the perfection of Capacity—absolute perfection is not understood—but comparative; for no work of art can possibly be altogether perfect. The έντελέχεια Δυνάμεσε of an intelligent and active being may however reach, in a certain sense, absolute perfection; as the traveller before he sets out on his journey is possessed of the necessary power; but when he has by exertion actually completed his journey and arrived at his, destination, the act is perfect, he has effected his purpose. The like may be said of the mariner whose labor, directed by skill, enables him to reach his destined haven; and every human pursuit is carried on by this active energy, or action of a being in power.

Δύναμις has many significations. It is active power, it is capacity, it is the power of governing a state, (for Demosthenes informs us that it is impossible for a prince despising truth and the facred obligations of an oath to acquire permanent established power, δύναμιν βεβαιὰν,) and it is used to signify an army—as Lady Percy uses the equivalent word when she says

" My heart's dear Harry Cast many a northern look to see his father Bring up his powre."

Aristotle, ever careful to define accurately the meaning of the words he employs, and then various acceptations, occupies a whole chapter in explaining the philosophical import of the word δύναμα, under the title of Δύναμας ποσαχῶς λέγεται, so that wherever it may be met with in his works it may be without difficulty understood. First, he says it is explained to be the principle of motion or change—ἀρχὴ κινήσευς, ἡ μεταβολῆς. Sometimes δύναμις implies capacity, whether of acting of suffering, but in its most general acceptation he says it is the principle of change: ὥστε ὁ κύριος ὅρος τῆς πρώτης Δυτάμευς ᾶν ειη Άρχὴ μεταβολικὴ, ἐν ἄλλφ ἢ ἄλλο. What the last words of this sentence imply we discover from the concluding part of the definition of motion, ἢ τοιοῦτον, κίνησίς ἐστιν, where the τοιοῦτον in the neuter gender, clearly refers to what is made the commencement of the following sentence, but which, we may infert ought to have been continued in

one, olos τοῦ μέν ἀλλοιστοῦ Ἡ ἀλλοιστον—ἀλλοίωπις. Permutation is the change brought about in a permutable body, in so far (ή quaterus) as that change is actually effected, and without regard to other circumstances.

In a following chapter (lib. iii. Physica: Auscultationes) he again explains and illustrates his definition of motion, and no words can convey a more distinct meaning than these, κινητικόν μέν γάρ έστι ΤΩ ΔΥΝ-AΣΘΑΙ, κινοῦν δὲ τῷ ΈΝΕΡΓΕΙΝ. That which may move is in power—that which does move is in energy; what then is the fair interpretation of this definition of motion, so freely censured? Is it not that a distinction being necessarily made throughout all nature (kab' ekarτον γένος) between what potentially exists, and that which is in actual existence, the act of a being in power, that is motion? But it will be said, how does this definition apply to inanimate bodies, to the flowing of rivers, the tumultuous motion of the waves of the sea, or the rulling of a rock down a precipitous declivity? Let us hear in mind that Aristotle refers all motion immediately or mediately to mind, because he teaches that no inanimate body can be the cause of motion; and the phænomena of electricity fully establish the fact, that an invisible but active principle pervades all nature, to whose agency we have reason to behave that all motion of animals and things inanimate is to be referred. What this active principle is we know not, for we cannot detain it nor subject it to the scrating by which we examine mere matter; but its effects are most evident, and we may say with the poet,-

" Cansa latet -- Vis est notissima."

One thing we know, that this most powerful and onnipresent agent is not mere matter; and when we admit this, we must also admit that the definition of motion by Aristotle is correct, and that it really is the act of a being in power.

He says, that, before we proceed to the study of nature, it is necessary, first, to acquire correct ideas concerning motion, no change in the universe taking place without its agency; for by it material forms come under the cognizance of our senses, and again are resolved into what entirely escapes them. In his book, de Catagoriis, he informs us that of motion there are six species, γένεσις, φθορὰ, αύξησις, μείωσις, ἀλλοίωσις, and last of all, that which is commonly received as the definition of motion, μεταβολή κατὰ τόπον—change of place.

This division of the species of motion proceeds upon the assumption, that from the materia prima, to us invisible, material forms come into existence, or rather become perceptible by our senses; and this yéveaus, to: Inch our word generation but imperfectly answers, he calls singus

όπο του μή οντος, προς το ον. Motion from a state of non-existence, to actual existence, which we judge of by the evidence of our senses. The converse of this species of motion is $\phi\theta\rho\rho\dot{\alpha}$, when the parts of material forms are again resolved into that from whence they proceeded, the ύλη πρώτη, and this he calls κίνησις άπο του όντος, πρός το μή όν, by which words he does not mean that any particle of matter is annihilated · but, as has just been said, entirely escapes the cognizance of our senses. Authors is perceptible accretion or growth without relative change of place, as plants spring from their seeds; and pelwous is the converse, the gradual diminution of such substances as tend towards Their φθυρά. 'Αλλοίωσις is the change of quality effected by motion, the external form remaining unchanged, as well as its local situation, as a piece of wood immersed in certain waters becomes stone, without alteration of form or change of place; and this is called μεταβολή κατά ποῖον, aml the change is said to be effected in the subject, η άλλοιστὸν, that is, considering the change of quality merely, without regard to any other condition or accident, as when; where, &c. The last species of motion is the μεταβολή κατά τόπον, change of place, which is strictly speaking the effect of motion, but is commonly received as a definition of motion itself. These species are 10 be regarded as universals, for if we come to enumerate particular species, we shall find them infinite, which leads the author to conclude that they are as numerous as the species of being, κινήσεος και μεταιδολής έστιν είδη τοσαύτα, δαα τοῦ "Οι - .s.

The definition of motion given by Aristotle has by some been censured as unintelligible, because his words have been mistranslated, when his philosophical language was no longer commonly undertsood; and very faulty Leatin translations have been quoted as the ipsissima verba of the illustrious author. The learned Benedictine, Perionins, observes concerning this very definition, "motus quidem quid sit, si his verbis definiator, quibus alii qui ante me hos libros transtulerunt definierunt, sphinge opus erit qui illam ejus definitionem explanet. Quis emm præter admodum paucos, atque cos qui in barbaro sermone educati sunt, intelligere potest, quad sit actus entis in potentia, secundum quod in potentia?" Here we have the very words attributed to Aristotle by Professor Playfair, words which convey not his meaning, and for which he is in no respect to be held accountable. And here also it may be observed, that as long as the philosophical language of the Stagyrite was understood, so long was he regarded as the first of philosophers, and his commentators, as Simplicius, Philoponus, and Ammonius, are easily intelligible; but when, upon the decay of Greek the true meaning of the author-was lost, and the peripatetic philosophy. degenerated into what has been called the "jargon of the schools."

An attempt has been made to show that the definition of motion given by Aristotle is just and comprehensive, that his words are nicely chosen, and accurately express his meaning; but whether that attempt bath been successful or otherwise, must be submitted to those who can read the author in his own language; and of those the writer has met with none who complain that his writings are unmitelligible.

While Professor Playfair infers the vagueness and obscurity of the physical speculations of Aristotle, from a very gross mistranslation, he eulogizes Lord Bacon as a great philosopher, who delivered mankind from a slavish subservience to the precepts of antiquity, and introduced the inductive method of reasoning, recourse being constantly had to experience. "The process by induction (says Dr. Reid) is aidnous, being an ascent from particular premises to a general conclusion. The Deity governs the world be has made, by general laws; the effects of these laws in particular phenomena are open to our observation, and by observing a train of uniform effects, with due caution, we may at last decypher the law of nature, by which they are regulated." The philosophy of Bacon, by particular experiments, proposes to use to general principles; and he says that nature, if put to the torture, may be brought to confess many of her secrets; but whether he means, that hy particular experiments, a knowledge of the laws of nature may be actually obtained as Dr. Reid has said, is not clear. It is however certain that Lord Bacon, a man of great sagacity, and much attached to the study of nature, entered sipon the "advancement of science" without knowing what had been done before him; and did not consider that the accidents of matter being infinite, the results of our experiments on matter must also be infinite, leaving us as far from the knowledge of general principles, as when we commenced our pursuit.

For this reason the ancient philosophy was confined to universals, and Plato advised his scholars, when they had from first principles descended through the higher genera, which include many subordinate species, down to the lowest rank of species—those which include only individuals,—there to stop, because of these there could not possibly be any science. Δεὶ μέχρε των ειδικωτάτων ἀπὸ τῶν γενικωτάτων κατιώντας παρακελεύετο ὁ Πλάτων παύεσθαι—τα δὲ ἀπειρά φησιν έμν μη δὲ γὰρ ᾶν ποτὲ γενέσθαι τούτων ἐπειτήμην. Porph. Isagoge. ε. 2.

Lord Bacon was admonished by Sir Thomas Bodley, when about to publish his cogitata et visa, of the inutility of his plad, and the bad consequences that would arise from its adaption. "In case (says Sir Thomas) we should concur to do as you advise, which is to renonnce our common notious, and cancel all our theorems, axioms, rules and tenets, and so to come babes ud regnum naturæ, as we are willed in scripture to come ad regnum colorum; there is nothing more certain in my understanding than that it would instantly bring us to barbarism. and, after many thousands of years, leave us more unprovided of theoretical furniture than we are at this present. For that were indeed to become rasa tabula, when we shall have no impression of any former principles, but be driven to begin the world again, to travel by trials of actions and sense, (which are your proofs by particulars,) what to place in intellectu for our general perceptious, it being a maxim of all men's approving: 'in intellectu nilul esse, quod non prius fuit in And so in appearance it would befal us, that, till Plato's year be come about, our insight in learning would be of less reckoning than now it is accounted. As far that which you inculcate of a knowledge more excellent than now is among us, which experience might produce, if we would but essay to extract it out of nature by particular probations, it is no more upon the matter but to incite us unto that, which without instigation, by a natural instinct, men will practise of themselves: for it cannot in reason he otherwise thought, but that there are infinite in all parts of the world (for we may not in this case confine our cogitations within the bounds of Europe,) which embrace the course which you propose, with all the diligence and care that any ability can perform. For every man is born with an appetite of knowledge wherewith he cannot be glutted, but still, as m a dropsie, thurst after more. But yet, why men should hearken to any such persuasions, as wholly to abolish these settled opinious, and general theories to which they have attained, by their own and their aucestors' former experience, I see nothing yet alledged to induce me to think it. -If now we should accord with you in opinion. First to condema our present knowledge of doubt and incertatude, (which you confer but by averment; without other force of argument, and then to disclaim all. our axioms and maxims, and general assertions that are left by tradition from our elders to us, which (for so it is to be pretended) have passed all probations of the sharpest wits, that ever were abecedgrii, by the frequent spelling of particulars to come to the notice of new generals, and so afresh to excate new principles of sciences, -the end of all would be that when we should be dispossessed of the learning

which we have, all our consequent travel will but help us in a circle to conduct us to the place from whence we set forward, and bring us to the happiness to be restored in integrum, which will require as many ages as have marched before us, to be perfectly achieved. And this I write with no dislike of encreasing our knowledge with new found devices (which is undoubtedly a practice of high commendation) in regard of the benefit they will yield for the present, that the world bath ever been, and will assuredly continue, very full of such devisers, whose industry that way hath been very obstinate and enument, and hath produced strange effects above the reach and the hope of men's common capacities; and yet our notions and theorems have always kept in grace both with them, and with the rarest that ever were named among the learned."

In a postscript to this letter, dated Fulham, Feb. 19, 1607, his Lordship is informed that it will be necessary for him to "cast a censor's eye upon the stile and clocution, which, in the framing of some periods, and in divers words and phrases, will hardly go for current, if the copy brought to me be just the same you would publish." This letter is not commonly to be met with in English, and the Latin translation by Gruterus is not accurate; it is however interesting as it shows that Lord Bacon was warned in good time of the consequences to be expected from his system of induction and disregard of ancient learn-That system however was patronized by the court, and James was no doubt proud to have it believed that he had a Chancellor wiser than Aristotle. Grecian philosophy was represented as useless, and ontological researches as visionary, and having no sure foundation in truth. It was in vain suggested by a few, that inductive reasoning was not unknown to the Antients, and that many experiments must have been tried before they reached that comparative perfection of art which leaves all modern efforts so far behind: the doctrines of Lord Bacon were fashionable, and fashion not unfrequently prevails against truth and common sense.

When towards the close of the seventeenth century, Sir Isaac Newton published hi *Principia*, it was then said that the laws of motion were discovered on the principles of the Baconian philosophy, and in the opinion of the many, the whole phænomena of the Universe were satisfactorily accounted for by the new discovery. But it is not a little singular, that neither Bacon nor Newton have given any general definition of motion, although the one wrote a tract expressly upon the subject, and the other described to the world the laws by which it is regulated. The terms used by both are very inaccurate,

and the first law of motion, as given by Sir Isaac Newton, is so expressed, that it is evident he did not know the real import of the words he used. It was well observed by Bishop Horsely many years ago, that the words "status motûs," state of motion, imply a direct contradiction in terms. "I believe," (says the Bishop) "that some active principle is necessary for the continuance as well as the commencement of motion. I know that many Newtonians will not allow this. I believe they are misled, as I myself have formerly been misled by the expression a state of motion. Motion is a change; a continuance of motion is a further change; a further change is a repeated effect; a repeated effect requires a repeating cause. State implies the contrary of change; and motion being change, a state of motion is a contradiction in terms." The reasoning of the Bishop appears altogether conclusive, and perfectly agrees with the common sense and language of mankind: for we say a fortress is in a state of siege, but not that an army is in a state of march, an arrow in a state of flight, or a ship in a state of voyage. The vis inertiæ spoken of by Sir Isaac Newton is a contradiction in terms, no less destructive of meaning than the state of motion; inertia implying a privation of actual energy, of which ris can never be the attribute, for it implies energy itself, or power exerted. These are not mere verbal criticisms, or slight objections to the philosophy of Sir Isaac Newton, for incorrect definitions are fundamental and essential errors affecting every argument from them derived ; and it affords no proof of the accuracy of Sir Isaac's principles, that his mathematical deductions are correct, for we daily see that men can reason justly on assumptions altogether unfounded. It is true that in his later writings he appears to have acquired more correct ideas of motion; but his *laws* of motion which nature never obeys, are assumptions not accurately expressed, and form a kind of attempt to show what would regulate motion, were the order of nature different from what it really is.

Bacon's ideas concerning motion he gives in a separate treatise, De motis variis speciebus; and as his philosophy is confined to matter, or the common phænomena of nature, his definitions of motion are first to be considered, as by it all changes in nature are effected. First, he says, is the "motus antitypiæ materiæ," quæ inest in singulis portionibus ejus, per quem plane annihilari non vult. Neque hujus motûs exempla proponi consentaneum est. Inest enim omni corpori." How motion in its most general acceptation should be defined the abhorrence of annihilation, the reader must find out as he best may.

Secondly, he gives as a species of motion, nexus, which he explains

to be "motus ne detur vacuum," which is merely a subordinate species of the μεναβολή κατὰ τόπον.

Then, says he, there is the "motus libertatis, per quem corpora se liberare nituntura pressurà." He gives as instances of this motus libertatis; water which reacts upon the swimmer—air upon the bird in its flight—and the pop-guns of children, in which condensed air expens the pellet.

His fourth species is motus hyles, which he says is the converse of motus libertatis. "Aqua si per compressionem arctetur, recalcitrat, (is not this a motus libertatis?) et vult fiert qualis fint, scilicet latior. At si interveniat frights intensum et continuatum, mutat se sua sponte, et libenter, in condensationem glacier; atque si plane continuetur frigus, nec a teporibus interrumpatur, (ut fit in speluncis, et cavernis paulo profundioribus,) vertitur in crystallum, nec unquam restituitur."

Then comes the motus continuationis, by which he appears to mean what we call the attraction of cohesion; and the sixth species he calls motus ad lucrum sive motus indigentia, and the examples show that by this term he means elective attraction. His seventh and eighth species he calls motus congregationis majoris, and motus congregationis minoris. By the first he says that he means that power by which heavy bodies fall to the earth, and the light ascend, ad ambitum coeli. By the motus congregationis minoris, he says, that cream ascends to the surface of milk, and the dregs of wine subside to the bottom.

Motus magneticus is the ninth species.

Motus fugar the tenth, by which animal excretions, antipathies are accounted for; and it may be sufficient merely to enumerate the other nine species.

Motus assimilationis.

Motus excitationis.

Motus impressionis.

Motus configurationis aut sitùs.

Motus pertransitionis.

Motas regins vel politicus.

Motus rotationis spontaneus.

Motus trepidationis, and finally

Motus exhorrentia Motûs.

Thus Lord Bacon enumerates nineteen species, without once informing us what his definition of motion is; and he might easily have increased the species to hundreds and thousands, for the accidents of motion are infinite. Let any unp-ejudiced man, who understands the

B•

VOL, XVI.

Greek and Latin languages, compare the definitions of motion, and the illustrations given by Aristotle, with the tract written upon the same subject by Lord Bacon, and say who of the two is to be accused of "vagueness and obscurity in his physical speculations." Let him try to express in other words the meaning of Bacon, and see whether he can make out any distinct definition universally applicable. From the extracts given above, the reader will see that he assumes the compressibility and elasticity of water, as its properqualities, and enumerates certain effects of motion as its species. He will also see, upon an examination of his works called philosophical, no trace of his acquaintance with the antient philosophy beyond a smattering of mythology, which he dignifies with the title of "Wisdom of the Antients;" and there is reason to believe that he was not well acquainted with Greek literature, for with the exception of one trite line from Homer, introduced as complimentary to himself, there is nothing of the language in his works.

He knew that certain logical works of Aristotle are styled organum, and he gave the title of novum organum to his treatise, in which he proposes his improvement in the manner of carrying on philosophical investigation; a work so much admired by Dr. Reid, that he said "he was apt to measure a man's understanding by his estimation of the works of Bacon." He, with many other modern writers, seems to think that men did not reason justly, nor try experiments, till Bacon pointed out the way; and by many it is believed that he condemned the antient philosophy, because, after making himself fully acquainted with it, he had discovered its defects. It is, however, certain, that the arts were in a high state of perfection in the days of Aristotle, a perfection to which frequently repeated experiments must have been necessary; and the writings of the peripatetic philosophers bear witness how accurately they reasoned. It has, however, been the lot of those illustrious men to be censured and despised when they are no longer understood; for while their writings were distinctly comprehended, their fame remained in meridian lustre, and was only eclipsed when men had arrived at what Plato calls that "grievous ignorance which imagines itself the perfection of wisdom." 'Αμαθία μάλα χαλεπή, δοκούσα είναι μεγίστη φρύνησις. We shall in vain inquire for any scholar who, understanding the works of the autient philosophers, does not admire them, while on the contrary those who reducule their philosophy afford the most convincing proofs that they make themselves merry for want of that information which would not fail to ensure their respect. When we contemplate the numerous writings

Cl. Jl.

NO. XXXI

on metaphysics and philosophy that have succeeded one another in rapid succession since we have lost sight of our antient guides—the continual attempts to arrive at fixed principles which as continually fail, we cannot rationally indulge in the hope that we are in the right path that leads to the acquirement of true science. It was the great study of the antient philosophers to distinguish truth from falsehood, but no part of the writings of Aristotle is now more ridiculed than his Analytics, which teach the rules of just reasoning by the syllogism, of which he is said to have been the first inventor. Of this work, so closely expressed that the illustrations of commentators are for the most part necessary to explain the true meaning, Dr. Reid undertook to write an analysis; a very hopeless task, in which it is not to be wondered at that he utterly failed. It is worthy of notice, that this writer, although a man of great probity, very freely censures the writings of the Stagyrite, and then admits that he had neither read them fully ver, nor understands them. "His writings," says the Doctor. "carry too evident marks of that philosophical pride, vanity, and envy, which have often sullied the character of the learned. He determines holdly things above all human knowledge; and enters upon the most difficult questions, as his pupil entered upon a battle, with full assurance of success. He delivers his decisions oracularly and without any fear of mistake. Rather than confess his ignorance, he hides it under hard words and an.biguous expressions, of which his commentators may make what they please. There is even reason to suspect that he wrote often with affected obscurity, either that the air of mystery might procure great veneration, or that his books might be understood only by the adepts who had been initiated in his philosophy. The faults we have mentioned are such as might be expected in a man who had the during ambition to be transmitted to all future ages, as the prince of philosophers, as one who had carried every branch of human knowledge to its utmost limit, and who was not very scrupulous about the means he took to obtain his end." This censure can neither be regarded as candid, liberal, nor fair, in a man who thus expresses himself in another part of his work. "In attempting to give some account of the analytics and topics of Aristotle, ingenuousness requires me to confess, that though I have often purposed to read the whole with care, and to unilerstand what is intelligible, yet my courage and patience always failed before I had done. Why should I throw away so much time and painful attention upon a thing of so little real use?"

"If I had lived in those ages, when the knowledge of Aristotle's

"Organon" entitled a man to the highest rank in philosophy, ambition might have led me to bestow upon it some years of painful study, and less I conceive would not be sufficient. Such reflections as these always got the better of my resolution, when the first ardour began to cool. All I can say is, that I have read some parts of the different books with care, some slightly, and some, perhaps, not at all. I have glanced over the whole often, and when any thing engaged my attention, have dipped into it till my appetite was satisfied. Of all reading it is the most dry and painful, employing an infinite labour of demonstration about things of the most abstract nature, delivered in a laconic style, and often I think with affected obscurity; and all to prove general propositions, which when applied to particular instances, appear self-evident." These extracts from Dr. Reid's Analysis of the Logic of Aristotle, are very interesting, as they show the gross injustice practised in our times towards the illustrious dead of former ages. The late Lord Kaimes, it appears, applied to Dr. Reid for an account of the Logic of Aristotle, to form an appendix to one of his Sketches of the History of Man; and how the Doctor executed his task-and how far he was qualified to undertake it, the preceding passages show. His Lordship, however, was anxious to establish the superiority of modern learning and modern philosophy; and upon the supposition that he was not very desirous of a favourable report of the peripatetic logic, he applied for information, not to those who had studied and really understood the works of Aristotle, for then he might have properly consulted Harris or Monboddo, but to Dr. Reid, who admits that he believes it would cost him the study of years to comprehend the "organon," as far as it is intelligible. Now this " organon" forms but the introduction to the Philosophy of Aristotle, and gives the rules by which in his philosophical writings he distinguishes between truth and falsehood. The import of the words used, being first accurately explained, these rules are delivered in the most roncise manner, so that amphfication is necessary to those who enter upon the study to render them intelligible: but it is not true that he uses hard words and ambiguous expressions, of which his interpreters can make what they please; for when those who have studied the "organon" proceed to the study of his philosophical works, they find in every page practical illustrations of the rules of the organon, which prove that the illustrations of the Alexandrian commentators on that work are in every respect just and well founded.

That the "organon" was so concisely expressed as to require illustration, Aristotle himself informs his pupil Alexander, and therefore, we cannot wonder that Dr. Reid should complain of the study as dry; but when he adds that a great labour of demonstration is used to prove general propositions, which when applied to particular instances, appear self-evident, he admits the intelligibility of the work, and unintentionally pays the highest compliment to the inventor of the syllogism, whose object it was to render what at first appears doubtful, by a short and conclusive train of reasoning self-evident. In no age of the world did the knowledge of Aristotle's organon intitle a man to the highest rank in philosophy: that knowledge merely qualified him to enter upon the study of philosophy, when he might with the greatest pleasure prosecute the studies, that to the author of the Analysis appeared so dry and painful. Doubtless the study of Homer and Demosthenes must prove dry and painful to those who are but imperfectly acquainted with the Greek language; for the accuracy and beauty of the composition only become apparent to those who by patient study have surmounted the difficulties of the language, and made themselves acquainted with the style of the authors. But no Greek scholar who will take the trouble of studying the "organon," with the assistance of Porphyry, Ammonius, and Philoponus, will complain of it as unintelligible; and a farther acquaintance with the writings of the author, will convince the most sceptical reader that his terms are express, and well chosen. If it be true that in order to understand the writings of Euclid and Archimedes there is need of illustrations and diagrams to enable the learner to discover the sense -if in the study of the ancient poets, rhetoricians, and historians, much attention be necessary in order to discover their excellence and beauty—how shall any man, confessing that he has never studied attentively the works of Aristotle, pretend to decide upon their merits, or give an analysis of that which he confesses he doce not understand?

In common with his countrymen who have written on the subject of modern metaphysics. Dr. Reid thinks but lightly of definitions; and says that Aristotle's have exposed him to much censure and ridicule; "yet," he adds, "it must be allowed that in things which need definition, and admit of it, his definitions are commonly judicious and accurate; and had he attempted to define such things only, his enemies had wanted great matter of triumph. I believe it may likewise be said in his favor, that until Locke's essay was written, there

was nothing of importance delivered by philosophers, with regard to definition, beyond what Aristotle has said upon the subject." From this passage it would appear that Dr. Reid believed Aristotle to have attempted express definitions of the infinite, the ansipa; but this he did not do, because he tells us that however far we extend our inquiries in subjects infinite, there must ever be something ulterior, and of such subjects we can have no perfect science. "Aristotle," says Dr. Reid, "considers definition as a speech declaring what a thing is. Every thing essential to the thing defined, and nothing more, must be contained in the definition. Now the essence of a thing consists of • these two parts: first, what is common to it with other things of the same kind; and secondly, what distinguishes it from other things of the same kind." According to this definition of the essence of a thing, we know that essence, when we know its genus and species; and this Dr. Reid says "he takes to be the substance of Aristotle's system, and probably the system of the Pythagorean school before Aristotle, concerning definition." Let us suppose a trial made of the Doctor's definition of the essence of a thing-let Linuxus furnish the generic and specific characters of a plant, and see whether from these we arrive at a knowledge of what the essence of that plant is; or even gain a competent knowledge of its properties. Let us bear in mind that in this case the genus and species of a tree, for example, merely refer to its external form and character. Before we can give an accurate definition of the sensible qualities of this tree, we have to put many questions. Is it tall or short, young or old, hard or soft, gross or slender, crooked or straight, with many branches or few? &c. But an answer to each and all of these questions, will not inform us of the real essenge of the tree; nor did the antients ever assert that the mind of man in his present state can comprehend it. Indeed Dr. Reid says, but two pages after he has given this definition of the essence of a thing, " what the logicians have said about the definition of a thing, if it have any meaning, is above my comprehension. All the rules of definition agree to the definition of a word: and if they mean by the definition of a thing, the giving an adequate conception of the nature and essence of any thing that exists, this is impossible, and is the vain boast of man unconscious of the weakness of human understanding." It is scarcely necessary to say that such a boast was never made.

What then are the rising generation to believe? Are they to reject the philosophy and learning of the antients as worthless and unmeaning, upon the testimony of those who arow that they have never read their writings, and regard all those as visionaries, who study and admire the more; the more fully they comprehend? Is it fair, is it consistent with the common principles of justice, that gentlemen habited in gowns, and presiding over the education of youth in our universities, should dare to represent that as unintelligible which they have never studied, and to represent that as exploded, of which they know not the merits? The subject, however, deserves the close attention of all those who are interested in the investigation of truth, for in that consists the only real pleasure to be enjoyed in this life; and it is proposed to resume the consideration of the comparative merits of antient and modern learning hereafter.

PASIGRAPHY.

THE sensations and reflections formed in our own minds, we communicate by means of oral sounds; to represent these to the eye, and enable others to imitate them, is the object of writing."

Can means be devised to abridge the middle step in this process? Is it possible to invent signs, characterising not sounds, but the very ideas themselves of which sounds are the representations?

If such an art can be perfected, it will possess important advantages over alphabetical writing. By its aid, all the sons of men, whatever may be their maternal tongne, may communicate among one another: their thoughts will be conveyed more vividly, more faithfully, and more precisely; but above all, the judgment of each individual will be formed with less hability to error, than when guided by information derived through the present medium.

That the Chinese mode of writing proceeds on this plan of representing ideas, not words, is well known. On the arrival of Lord Macartney's embassy at Pulo Condore, the chief of that island received his visitors in a room, which was observed to be covered with columns of Chinese writing; but the Chinese interpreter on board did not understand one word of the spoken language of the islanders. On their writing it down in Chinese characters, it became instantly intelligible to him, "and the fact was clearly ascertained," as Sir George Staunton expresses it, "that these characters have an equal

advantage with Arabic numerals, of which the figures convey the same meaning wherever known, whereas te letters of other languages denote not things, but elementary sounds, which form words, or more complicated sounds, conveying different ideas in different languages, though the form of their alphabet be te same." In almost all the countries bordering on the Chinese seas, we are indeed told that this written character is understood, though not their oral language.

Some benefit no doubt, might arise from a careful examination of the Chinese process, and on some occasions, perhaps, in borrowing from it; but we have already sufficient information to conclude that the whole system cannot be copied with advantage by another nation. It is, we find, the study of a life to become well acquainted with all their written characters. Though the tongue itself is monosyllabic, and possesses but about fifteen hundred distinct sounds, yet when written, it requires at least sixty thousand characters a some say, eighty thousand. On the formation, changes and allusions of these, thousands of volumes have been written: not above half a dozen characters are formed of a single line, but most of them of many; a few, of so many as seventy different strokes. Some of these characters of which we happen to be informed, seem whimsical; others, perfeetly arbitrary; and hardly any deserving of imitation. For instance, the verb " to run," is composed of two characters, that of "awrapping," and that of "feet." When this compound character was adopted, its inventors probably went barefoot, and when running, to prevent accidents to the feet, were in the habit of folding them in hide, felt, cloth, or some other rade succedaneum for a shoe. " Night" is typified by three characters; 1. that of darkness; 2 the action of covering: 3. man. But surely this definition is not sufficiently accurater All nights are not dark; night covers not man alone but all mature: a man may be in the dark by day, as well as night. - This definition depicts the night, no more than it does blind-man's-buff: one more snuple, and more true, might have been formed, it would soem, by subjoining to the generical sign for time, their type for the sun, with a negation.--Again; to express "marriage," a character is employed, compounded of two, representing "wine," and "a seal;", because the wine presented on that occasion by the bridegroom to the bride, is considered as the seal of their union. Many seem perfectly "To laugh," is expressed by two characters signifying a bamboo and heaven. "A prison," by three, signifying a dog, a word, and again, a dog. In order to comprehend the meaning of a compound Chinese character, that of its several component parts

must of course be first sought; but after this knowledge is acquired, the sense is sometimes so hid in metaphor, and in allusions to particular customs, or ways of thinking, that the meaning may yet remain in obscurity. In the study of Chinese writings, the judgment must be guided by attention to the manners, customs, laws, and opinions of the Chinese, and to the events and local circumstances of their country. By the most competent judge of the subject now living, we are indeed expressly told that in the Chinese writing, "the practice is no fess inconvenient and perplexing, than the theory is beautiful and ingenious." To deserve the appellation of universal, a language should steer clear of all allusion to customs, local or temporary, and each term should present to all men a meaning definite, and of itself intelligible.

To revert to our European notions of Pasigraphy, among the first, if not the very first writer to whom the utility of such an art has ocenried, is the great Chancellor Bacon. In his "Instrument of Discourse, 'he says, "it is possible to invent such signs for the communication of our thoughts, that people of different languages may by this means understand each other; and that each may read immediately in his own language, a book which shall be written in another .- As money may be struck of other materials as well as of gold and silver, it is possible likewise to discover other signs of things as well as letters and words." The advantages likely to result from such a discovery, the means of attaining it, and the difficulties impeding its execution, also struck the inquiring and sagacious mind of Descartes. In his printed correspondence he speaks of the necessary primitives to be employed in such a language, and on their signs. If by meditating on the subject of our thoughts, the order in which they arise, and produce others, could be distinguished, the due succession of these could be arranged with the same simplicity as the notation of numbers. In a single day, a man may acquire all the terms of numeration in a foreign tongue, however remote in sound from his own. If the same order were discoverable in the arrangement of all other subjects of thinking, it is evident that the terms in which they are expressed might be learned with equal facility. The philosophy which may thus decompound, simplify, and filiate our ideas, and which is indispensable for the formation of this universal language, he is disposed to

¹ Barrow's Travels in China, ch. vi. p. 254.

² Staunton's Chinese Embassy, III. 5.

J Laws of China, translated by Sir G T. Staunton, Pref. p. 11

think may be found out, and that therefore the art itself is attainable. Were the human race to receive this benefit, any peasant, he thinks, might then be enabled to form a more correct judgment on truth in general, than at present is in the power of a philosopher:—cujus beneficio, rusticus quispiam de rerum veritate posset melius Judicare quam jam philosophus aliquis.

The earliest pasigraphical attempt, of which any memory is preserved, was made by a Spanish Jesuit residing at Rome in 1653. For , its preservation we are indebted to Kaspar Schott, professor of mathematics at Wartzburg in 1066. Though the latter was of the same religious order, and was at Rome in the same year, he professes his ignorance of the author's name. By his scheme, it is proposed to reduce all words to genera and species, and to express them by numerals: Roman numerals denoting the genus, Arabic, the species. next in order of time, was the production of a physician at Mentz, John Joachim Becher, and published at Frankfort in 1661. plan in each of these is adapted to the Latin language; Becher indeed merely proposes the substitution of a numeral for each Latin word in the Dictionary, prefixing the same numeral to the word of similar meaning in every other language. In order to distinguish the inflections of nouns, verbs, and adverbs, to each number expressing the word, he subjoins another number separated from the first by a colon, and expressing the particular inflection in which it is meant to be employed. For the nonanative singular, for instance he subjoins, t. for the genitive, 2, for the dative, 3 &c. The indicative mood, present tense, singular number, first person, of the verb active, is distintinguished by 13, &c. In all, 173 numbers. A Latin dictionary is to be provided, in which all words, as they stand in alphabetical order, are to be distinguished by a number; another list is to be prepared for every other language, into which the same number that is prefixed to the word of similar import in the Latin dictionary, is to be prefixed to each word. In writing, the number alone is to be employed; but if a noun, verb, or adverb, with the number expressing the case, number, gender, degree of comparison, mood, tense, &c.; and the meaning of each word is then to be sought in the list appropriate to each language.

One of the advantages attributed by the author to his scheme is, that by an agreement between two correspondents, to change arbitrarily the signification of each of the numerals, a cypher difficult to

[!] Cartesius Epistolæ omnes, p. 1. Ep. 3, ad Mersennum, p. 315-317.

discover may be established. Perhaps the whole scheme may rather be viewed as a cypher, than as a successful step in Pasigraphy. indeed, not πασι γράφειν, but properly, intelligible to those only who read Latin, and built entirely on the syntax of that language. For example, 159 stands for the supine in um; and 160, for the supine in u. The structure of sentences cannot in two languages be exactly tike, any more than the number and meaning of words; in particular, not of the particles, on which the whole construction and sense of each sentence depends. Becher's scheme must therefore be viewed merely as a substitution of numbers for Latin words, and holds out no advantage sufficient to compensate the enormous trouble, of a double search at least, for every single word, written and read. Such as it is, however, the scheme was attempted, in 1805, to be revived, for want of better employment, by some persons composing what they were pleased to style, a Celtic academy, at Paris. - For Latin, as might be expected, these Celtic gentlemen recommend the adoption of French, the pagaration of dictionaries in their own tongue, and in all others, with the numbers to each word in French, and to the carresponding word in foreign tongues, precisely on the plan of Becher.

In the year of Becher's unblication, George Delgarme, an Englishman, entered on the same career. His work was printed in London under the title of "The art of Signs, or a Universal Character and Philosophical Language, by means of which, men of the most different idioms may in the space of two weeks learn to communicate, whether by word of mouth or writing all their thoughts, as clearly as in their mother tongue." This work, which we have never seen, also adopts numerical figures, as signs of words. One of the twenty-two folio volumes of which Athanasius Kircher, a German Jesnit, was the author, and published at Rome in 1663, is entitled, " Polygiaphia, sen Artsficium linguarum, quocum omnibus totus mundi populis poterit quisquam correspondere." Still another Jesuit, Père Besmer, published at Paris in 1074, a work entitled, "La Rénnion des Langues, ou l'art de les apprendie toutes, par une senle." Joachim Frisichius, a Professor in the Gymnasium at Riga, appears to have been employed about the same time in a similar attempt, of which a specimen was printed at Thorn, in 1681. But he who appears to have been most devoted to the pursuit and discovery of this art, was the famous Leibnitz. From the year 1666, when in the twentieth year of his age, he printed his Dissertatio de arte combinatorià, till the year 1714, two years ante-

cedent to his death, there remains evidence of his retaining the persuasion of the practicability and the utility of this art! During a space of nearly half a century, he recurs to this favorite subject in his correspondence, regretting latterly his want of time and of assistance to complete this grand design. An analysis of the Subjects of our ideas must, according to his opinion, precede the formation of a universal language; an intellectual alphabet, "Alphabetum cogis rationum humanarum," must be constructed, and then symbols devised, representing objects of sight by some of their prominent parts: things not objects of sight, by some visible objects having relation to them: the inflections of words and particles, to be noted by arbitrary connecting signs. By these means may be obtained a character, which may effect for speech in general, what is now effected in algebra and arithmetic, by signs and cyphers. Such a work he thought might be accomplished by a few literary men in the compass of five years. By this invention, the mental faculties might be as much aided, as the eve is by the use of the microscope and telescope. All the other powers of man, he says, may be perverted and misapplied, but the exercise of a sound and right judgment can be directed only to useful pur-A third part of our lives might be saved by such an art, as we employ that portion, at least, in the acquisition of languages.

In October, 1814, five lectures on the passgraphic art, were delivered at Vienna by J. M. Schmid, a Professor in the Bavarian University of Dilingen. Of three of these, the substance is contained in a small pampilet printed in March 1815, at Dilingen, under the title of "Magazin für algemeine sprache;" which the professor announces his design of continuing periodically, dedicating it principally to the reception of papers on this art. When the second number of this magazine appeared, we are not apprised; but a third was printed in March of last year, in which a fourth number is promised in August, and not less than three or more than five in each succeeding year. Of these the first and third numbers, are all we have yet had the good fortune to receive.

In his preface, the author commences with observing, that we all employ our thoughts on the same objects; the laws governing our modes of thinking are substantially and unalterably the same; our sensations alike; no essential difference in the organs of speech; and yet, within two days' journey, it often happens that no one man comprehends another's speech. Though the observers, the mode of observation, and the objects observed, are alike, yet the appellations

bestowed on those objects, and on the sensations to which they give rise, are subject to infinite variation.

On how many occasions, and in how many ways, is this variance productive of inconvenience! We wish to make ourselves understood by, and to understand, every person with whom we come in contact: we wish to make ourselves acquainted with the literary productions of other nations; but the difference of speech stands in the way. The more extended our travels, the more earnest our desire to improve our minds, the greater is the number of foreign idioms which we must master. But the acquisition of languages requires so much time as to encroach essentially on that necessary for more important purposes. Experience also proves that this knowledge is as easily lost as acquired; and that constant practice alone can make it possible for a man so to express himself in speech and writing in two or three languages, as that the foreigner may not be detected. How few are the writers who have composed classically in two languages? and who has accomplished this, in three? How natural therefore is the wish that some one speech, or at least one writing may be adopted, in which the educated persons of all nations may communicate with each other? The conviction of the high importance, and of the practicability of such a language, has become more general; and though it must be admitted that all the preceding attempts to devise such a mode of communicating our ideas have not been successful, its impossibility is not by any means to be inferred. A periodical publication which shall receive and contain all that can enable the friends of literature to form a just judgment on the subject, would itself be of some value, though the attempt should utterly fail. Those attempts that have been made, are dispersed in books, some of very rare occurrence, and all of them never yet have been brought together under

From holy writ we learn 2 that there was once but one language: what has been, may be again. On the inventors of the new language, if success attends the attempt, it will be incumbent to comprize in it all the advantages and excellencies now to be found in each existing language. Suppose ourselves in the time before the invention of musical notation, had any one then announced his discovery of a cypher for tones, of such a nature as that the voice, or an instrument, should be directed in it in any tune or measure, would not this have

¹ Vater computes that about five hundred languages are now spoken. Adelung Mithridat. III. 2 Abtheil. Beil. 1813.

² Gen. xi. 1.

been disbelieved? So many various sounds; instruments so different; and these all to be directed in exact harmony, by a written cypher! Impossible! And yet such a cypher we have; sufficiently perfect, independent of all language, and in its nature pasigraphic. Music, composed by an Italian, can be played in concert by Germans, French, Spaniards, Englishmen, on different instruments, without one understanding the language of another. This is also the case with regard to arithmetical cyphers, algebraical and mathematical signs, those employed in pharmacy, in astronomy. Objects of a nature widely remote from each other are at present, therefore, represented by signs, Independent of speech. Why may we not come to an agreement as to all others? That wall of separation which unfortunately, by the diversity of tougues, keeps asunder civilized nations, would then be removed.

Should pasigraphy ever be brought to perfection, it must be by taking an enlarged view of the subjects of human thought, and showing how each idea is connected with, and opposed to another: it must be elevated above the accidents of a grammar or dictionary, freed from the iron sceptre of custom, and must be framed so as to leave the mind in perfect liberty in its conceptions and communica-It is clear that all the objects of thought cannot be distinguished by peculiar signs: a classification must be attempted. We may begin by dividing them into the two great heads of animate and manipate. The first division may include matter; the second, plants; the third, beasts; the fourth, man; the fifth, spirit. On whatever objects the human intellect may expatiate, or fancy employ itself, to one of these five they may be reduced. Suppose C. to represent existence in general, C'. may be applied to matter: C2. to plants: C3. to beasts: C4. to man: C5. to spirit. In his fourth lecture, which, if published, we have not yet received, the author promises further to develope his ideas on pasigraphical relation. If it be fair to judge of what we have not seen by what we have, we confess we do not anticipate much progress in the art. Confining our attention to that portion of it which is addressed in the first instance, and exclusively, to the eye, and considering the great number of signs which will be indispensable, and the expedience of distinguishing their relations in the most simple, and at the same time obvious manner, we apprehend the attempt should be made in symbol writing, to effect as much as possible by position. Supposing all objects typified by invariable signs, their relations to each other may be denoted by placing the cyphers above or helow, in parallel lines, in a manner resembling that practised in musical notation.

The art of instructing the deaf and dumb by gestures, which is at present both at Paris and in London so successfully practised, is also in its nature pasigraphical. The ingenious improvers of this art could undoubtedly furnish valuable hints, and particularly as to their mode of classifying and describing objects not within the reach of external sense. In the attempts to effect this by pasigraphical means, the progress of the incipient art may perhaps be checked by expecting from it more than any art can effect. Of the five divisions into which Professor Schmid would reduce the objects of human ideas, C⁵. it is apprehended, will prove a blank. What does man know of immaterial beings? By what organs can be investigate their nature? By what terms but negations can be express them? All our ideas are derived mediately or immediately from the senses: to employ our reasoning faculties on matters beyond their reach, in search of knowledge which is not given us by means of organs not adapted to the purpose; and attempting it by the generalization or abstraction, as it is termed, of ideas derived from another source, can only lead to error and to evil. On what we thoroughly comprehend, we may, nay at last we must, come to an agreement: but where we only impose on ourselves and others, by pretending to any knowledge, the history of the world will evince that this leads but to endless and bitter controversy. The most valuable purpose to which pasigraphy itself can be applied, is to aid our mental calculations in distinguishing knowledge from ignorance, as well as from error. The difficulty that will attend the just and perfect representation to the eye of all moral objects in general by symbols, will be found, we fear, considerable; if to be accomplished at all, we apprehend Leibnitz's proposal the most likely to succeed, of uniting in concert in the pursuit, the talents of many ingenious men of different countries. The end in view is for the general good of mankind: were a previous correspondence to he carried on, and if any attempt to simplify and find the source of our moral judgments seemed likely to have satisfactory results, were a personal meeting to take place, from free conversation and debate perhaps some valuable ideas might be elicited. The learned world owes great obligation, in the mean time, to Professor Schmid, for laying the ground-work of such a plan; and we heartily wish that those who have given attention to this subject, and who we know are not few in number, would avail themselves of this opportunity to bring the whole, as it were, to a focus. In a subsequent number we hope to lay before our readers a more full account of the Professor's labors, in particular of his critique on Bishop Wilkins's plan, which we believe he has published in his second number.

MOTS OU OMIS PAR II. ETIENNE,

Ou inexactement expliqués

Par J. B. GAIL, Lecteur Royal et Conservateur des Monuscrits Grecs et Latins de la Bibliothèque du Roi.

No. VI. [Continued from No. XXVIII. p. 285.]

52. ἀνόητος, act. et pass. qui intelligi non potest, et qui non intelligit. H. Et. qui explique ce mot, tom. 2. p. 1073. c. ajoute, νοητὸν ορροπίτ τῷ νοῦν ἔχοντι; mais νοητὸν est, je crois, fautif; lisez, ἀνοητόν.

53. decaewois. Sens remarquable de ce mot ignoré d'H. Etienne et

de Denys d'Halicarnasse lui-même.

Je dis dans ce journal, (No. I. Vol. XII. p. 216.) que H. Et. se montre à tout moment étranger à l'analogie. J'aurois dû ajouter, que les principes de l'analogie et des désinences étoient quelquefois ignorés même d'écrivains grees estimés; que Denys d'Halicarnasse, par exemple, sembloit ne pas se douter du véritable sens de δικαίωσα. Ce critique célèbre, qui s'est appliqué à instruire les Romains sur leurs antiquités, connoissoit-il à fond les origines et les principes des désinences de sa propre langue, lorsqu'il met au rang des expressions poetiques le δικαίωσα de Thucydide, 3, 82? N'est-il pas évident que δικαίωσα est à noter non comme mot poetique, mais comme le mot propre, et tellement le mot propre, qu'ancun autre n'eût anssi bien rendu l'idée de Thucydide?

Et en effet, que signific δίκη? la justice proprement dite, cette justice émanée de la divinité (Soph. Æd. T. v. 901.) et que l'on fonle aux pieds dans ces tempêtes révolutionnaires graphiquement décrites par Thucydide. Alors, plus de justice, soit divine, soit humaine, δίκη. Alors les méchans en font une à leur gré, qui est l'iσχύσε ou βίσε δικαίωσες (Thuc.); alors ils fabriquent un code de justice qui certes n'émane plus du ciel. Cette justice qui n'est plus δίκη, comment

l'appeler? diraiwois.

On dira d'un juge intègre, δικάζει; d'un juge inique, δικαιοῖ. Ce juge inique ne juge pas, il s'efforce de rendre juste (force de la désigence δω) ce qui ne l'est pas : il donne à sa décision les couleurs de la justice : son prononcé est, non pas δίκη, mais δικαίωσα. Le juge inique en vient-il à braver ouvertement toutes les loix, alors il ne se donne pas même la peine de donner à ses décisions les couleurs de la justice; et c'est ce degré de perversité que signale Thucydide 8, β6. 2. (dans ce livre si remarquable par la profondeur des idées, et que cependant de tristes critiques refusent à Thucydide comme plein de négligences), σῦτε δικαίωσις εγίγνετο, mots que j'ai rendus imparfaitement par nec ulla legum minabatur.

54. διανοία, opposé à γνωμή, signifiera, idée vague; mais quand il n'aura pas de correspondant si signifiera, idée en général, pensée quelcouque. Dans la phrase suivante, "Ομηρος λέξει καὶ διανοία πάντας

υπέρ βέβληκε, (Aristote, de arte poet. ch. 34.) ainsi commentee par Quintilien, nic omnes sine dubio et in omni genere eloquentiæ superavit, le contexte détermine facilement le sens de διανοία.

55. Διάχυσις δγρότης δμμάτων.—Examen d'une locution de Plutarque, citge mais non expliquée par H. Et.—opinion d'un antiquaire

sur cette locution. - Mes conjectures sur διάχυσις.

1. διάχυσις, au propre, signifiera diffusio: ainsi, πολυτ. οἴνων διαχύσεις, vini pretiosi diffusiones. Dans le sens métaphorique, Plutarque
a dit (de Alexandri fort. p. 37.3, ed. Weeli.) τῶν ὀμμάτων τὴν διάχυσιν
καὶ ὑγρότητα μιμεῖσθαι θέλοντες; et (in Erot. sub finem), τὸ γὰρ
φάρμακον ῷ τὴν κόμην αὶ γυναῖκες ἀναλειφώμεναι ποιοῦσι χρυσοειδῆ
καὶ πύρραν, ἔχει λιπασμα σ. ἢ χαυνωτικὸν σαρκώς. ὥστε οἶον διάχυσίν

τινα ή διύγκωσιν έμποιείν.

A la suite de ces deux exemples, H. Et. note ces trois mots de signification voisine χαυνούν, διαχύειν, διυγκούν et χαυνωτικών σαρκώς, et διάχυσίν τινα ή διάγκωσιν σαρκός έμποιούν, et dit, qui enim aliquid laxius fungosinsque reddit, idem et diffundit, dilatatque, ut tumore quodam sese diffundat latius et aperial : puis il ajoute, animo etiam tribuitur διάχνσις, quia nimirum ex auditu, visu, cogitationeve jucundá sese aiffundit et aperit: ut contra rebus molestis mastisque contrahi dicitur. D'après ces notions et gloses qui établissent le sens de duiyvous, soit au propre, soit au figuré, arrivons à l'important passage (précité) de Plutarque. En parlant de Lysippe, qui réussit à donner aux yeux d'Alexandre une fidèle expression, Plutarque (l. l.) emploie cetle locution, τῶν ὁμμάτων τὴν διάγυσιν καὶ ὑγρότητα, " laquelle" selon M. Visconti " désigne la splendeur des yeur. Lorsqu'ils sont brillants et mobiles, ils paroissent, pour ainsi dire, nager dans un crystal: quoiqu'un artiste puisse difficilement représenter cette qualité du personnage qu'il copie, dans un portrait en peniture, et plus difficilement cucore en sculpture, il paroit que Lysippe, par la forme des contours, par le creux de quelques parties, et probablement par le inoyen de quelque matière brillante incrustée dans ses bronzes, avoit su obtenir un effet presque équivalent." Ainsi, selon M. Visconti, the διάχυσιν καὶ ύγρ. τῶν ὀμμάτων disigneroit la splendeur des yera, obtenue, probablement, dit-il, par le moyen de quelque matière brillante incrustée dans ses bronzes. Si M. Visconti ent pronouce, je me soumettrois; mais il hésite: j'oserai donc émettre ma conjecture, et dire que την διάγυσιν désigne, non pas l'éclat des yeur, mais la facilité des regards à se porter de droite et de gauche (force de bià), et plus litt. l'action (de l'œil) de se répandre çà et là : un autre diroit, d'après le physiologiste Magendie, la diffusion des nerfs de l'iris; mais je ne donne l'explication de διάχυσις qu'à titre de conjecture, et avec l'intention de revenir sur ce mol.

¹ Iconogr. Grec. 2. part. p. 207.

DE CARMINIBUS ARISTOPHANIS COMMENTARIUS.

AUCTORE G. B.

Pars v.—[Vid. No. XXX. p. 292]

Non leve profuit, nisi fallor, inventum meum de Epodis, ad Lysistratam emendandam; neque minus valebit maculas abstergere non paucas, quæ diu Vespis Comici adhæserunt, non cnivis homini eluendæ. In ea fabrila mihi videbar tres cantus Antistrophicos deprehendisse. At Hotibins eos præoccupavit. Restat tamen inter Epodos et Systemata, quod ingeninin satis exerceat, et laureolam, nuhi præreptam, aliquatenus compenset.

ὸς ἐς τὸ λοιπὸν τὸν τρόπον, πιθόμενός τε σοί.

Hæc antistrophica detexit Hotibius p. 105. et post eum Reisig. p. 124. ducti procul dubio a Ray, qui veras lectiones, aut vero proximas, conservavit. Etenim in stropha omittit δή et των, in v. 4 et 5. Mox teste Reisigio Ms. apud Seidlerum habet Foris in v. 8. unde erui potest ποιών σε τὸ δ' εὐ, vice ποιών σὺ δε vel δ' αὐ. Et sane memor Horatiani præcepti Præsens carpe diem bic reposui to 8 w παρὸν δέχου: quæ locutio similis est Sophoclea in CEd. C. 1694. τὸ Φέρον εκ θεοῦ καλῶς χρη Φέρειν: ubi licet φέρον theatur Suidas bis, bene tamen Salher apud Heathium restituit παρόν: cui favet v. 154(). τούχ θεοῦ παρόν: neque a Comici mente distat proverbiale dictum τὸ παρὸν εὐ ποιείν, apud Platonem in Gorgia p. 340. E. et Diogen. Lacrt. in-Pittaci vità; neque τὸ παρὸν θεραπεύειν apud Sophoclem in Phil. 149. neque Χρή το παρον πράγμ' εὐ καλώς τ' Eig δύναμιν τίθεσθαι apud Cratinum, teste Photio: neque illud Hesychio, Τὸ παρὸν εὐ τίθεσθαι. Seager quoque in Classical Journal, No. iv. voluit παρὸν, alio licet sensu. In antistrophæ v. 2. Seager quoque in Classical Ms. B. ολός τ' ἐπεμαίνετ': 1. e. τότ' ἐμαίνετ': ut patet ex Rav. ολα τότ' ἐπεμαίνετ': at edd. vett. οἰς ποτ' ἐπεμαίνετ': Mox ἀρτίως ὅτι: at Rav. et Ms. B. omittunt ότι. Pro ἀρτίως reposui ἀρτίνους: quod exponit Euripides in Orest. 248. ἄρτι σωφρονών: ubi Porson. e Diogene Laertio sumsit άρτίως φρονών. In Hesych. est 'Αρτίπνουν. ορθόπνουν, male. Debuit esse vel 'Αρτίνουν vel 'Αρτίπουν. Certe 'Αρτίφρων bis usurpat Euripides. V. 4. Ita Rav. pro παρακελεύοντος: unde erni potest παρακαλούντος. V. 7. Vulgo φρονεί μέντο:. Rav. σωτρονεί μέντοι. Ipse vero propter Orest. 99. et El. 1111. όψε γε φρονείς εὐ: Bacch. 1343. "Οψ' ἐμάθεθ'—Œd. C. 1264. ἄψε γοῦν έκμανθάνω, Agam. 1427. όψε γοῦν τὸ σωφουκίν, et Vesp. 217. Νή τὸν Δί' ἔψε γοῦν non hæsitavi reponere voces efficaces, loco ineptæ particula pérro.

869 et sqq.
 Φοϊβ' 'Απόλλων κλῦθι, κά πὶ τάγαθῆ τύχη
 τόδε τὸ ποᾶγμ', ὅ γε μηχανᾶτ'

885 et sqq. ἀντιστρ. ξυνευχόμεθα, κάπάδομέν σε γ' ἐσχάραις νέαις ένεκα τῶν προλελεγμένων.

5

1225

ὶμποόσθεν οὖτος τῶν θυρῶν, ἄπασιν ἡμῖν ἀρμόσειας παυσαμένοισι τῶν πλάνων, Ἰήῖε παιάν. εὖνοι γὰρ ἐσμὲν, ἐξότου τὸν δῆμον ἡσθόμεσθά σθυ φιλοῦντος, ὡς τῶν νῦν γὰ ἀνἡς γενναιότατὰ οὐδείς.

Hæc quoque carmina antistrophica esse vidit Hotibius, et post eum Reisig. p. 39. Sed neuter rem acu tetigit. In strophæ v. 1, dedi κλῦθι pro πύθι. Etenim abundat nomen; at verbum modo non efflagitatur. V. 3. Vulgo absunt δὲ et τό: mox γε huc retuli ex antithetico post ἔνεκα. V. 5. Vulgo ἀρμόσαι ὡς. Inde erui ἀρμόσειας. In antistrophæ v. 2. Vulgo σοί γὶ ἐν νέαισιν ἀρχαῖς. Ατ ἐσχάραις νέαις bene convenit cum τελετὴν καινὴν in 876. V. 6. Vulgo ὡς οὐδεὶς ἀνὴρ τῶν νῦν γε σοῦ νεωτέρων. Ατ Schol. τῶν συνετωτέρων et γενναιστέρων pro var. lect. quam in textu habet Rav. Meam conjecturam aliquatenus tuetur Pac. 773. Γενναιστάτου τῶν ποιητῶν adjuncto Ran. 1254. ᾿Ανδρὶ τῷ πολὺ πλείστα δὴ καὶ κάλλιστα μέλη ποιήσαντι τῶν ἔτι νυνί.

1009 et sqq.

άλλ' ἴτε χαίροντες ὅποι βούλεσθ'.

ὑμεῖς δὲ τέως ὧ μυριάδες

νῦν τὸ μέλλον τ' εὐ λέγεσθαι,

μὴ πέσης φαύλως χάμαζε.

τοῦτο γὰρ σκαιῶν θεατῶν

ἐστὶ πάσχειν, κού πρὸς ὑμῶν.

V. 2. Ita Rav. pro δέ γε ταχέως.
 V. 3. Delevi ἀναρίθμητοι gl. pro μυσιάδες: et εὐλαβεῖσθε pro εὖ λέγεσθαι.

1060 et sqq. στρ.] Ita in Schol. distinguuntur.

1226, 7.
1232, 3, 4, 5.
1238, 9.
1245, 6, 7, 8.

Inter hec sunt Scolia, quæ leviter mutata, vel non, m suos usus convertit Comicus: cnjus tamen lepores nemo satis intellevit—neque id mirum—locus etenim est valde depravatus—sic emendandus. Sed prius argumentum contexere libet, quam verba singulatim tractare. Patrem snum Philocleonem, jam moribus et studiis mutatis, edocet Bdelucleon, quomodo se gerere debeat inter epulandum apud hommes beatiores: et mox fingit, cæna jam peracta, adesse convivis cantandi tempus. etenim ut ipse loquitur

Αὐλητρὶς ἐνεφύσησεν οἱ δὲ συμπόται 1219 εἰσὶν, Θέωρος, Αἰσχίνης, Φανὸς, Κλέων, 'Αναξαγόρας τε πρὸς κεφαλῆς 'Ακεστόρος. τούτοις ξυνών, τὰ σκόλι' ὅπως δέξει καλῶς. ἀλλ' ἐσθ ὅπος ἀἰνοι' κα σάδε δέξει' εἰν

1215

Quo melius horum verborum lusus aperiatur, opus est annotatione prolixiori: quam tamen nento refugiet, qui Comicum intelligere volci. Inter cœnam quinque convivæ interfuerunt. Quorum omnes, suo quisque ordine, Scolion canere finguntur: quod Philocleon a proprio ad ridiculum sensum detorquet. Hinc versum de Harmodio ad Cleona deflectit, qui aliquoties bona publica surripuit. Et similia dici possunt de ceteris, ut mox exponam. Nunc mutationes verborum percurrere libet.

" μετά Θετταλών δη πολλά μοι'

διεκόμπασας σύ γ' εκ καπνοῦ.

1221. Vulgo ξένος τις ἔτερος. At Comicus in tali loco non hominem quemlibet peregrinum, sed specialiter aliquem proprio nomine insignire debuit; neque alique fecit. Cur reposuerim 'Ανα-

ξαγόρας, vide ad 1232.

ФІЛ.

1223. Vulgo 'Αληθές ως οὐδείς γε διακρίων δὲ δέξεται. Inde erui 'Αλλ' ἐσθ', ὅσ' ἄδης γ', ἵκρι' ως τάδε δέξετ' εδ. Dixerat ΒΔΕ. τὰ σκόλια δέξει καλῶς. At ΦΙΛ. sciscitatur utrum sedes, i. e. mensæ vel theatro appositæ, sint bene ιε cepturæ quæcunque ipse 'canat. Amphibolia est in ἵκρια τάδε et τάδε, ὅσα γ'. Quæ sint ἴκρια, patet e Sind. ἕΙκρια, ὀρθὰ ξύλα ἢ σανιδώματα τῆς νηὸς καὶ τὰ τῶν θεάτρων — πρὶν γενέσθαι τὸ θέατρον, ξύλα ἐδέσμευον καὶ οὕτως ἐθεώρουν. ᾿Αριστοφ. Θεσμοφ. [402.] ϶Ωστ' εὐθὺς εἰσίοντες ἀπὸ τῶν ἰκρίων. Ubi ἴκρια primam producit.

1224. Vulgo ἐγὼ εἴσομαι. Sed ἐγὼ displicet repetitum. Formula nota est τάχ' εἴσομαι. Cf. Ach. 331. Iph: A. 970. Τάχ' εἴσειαι. Phæn. 260. Ibid. Pro γάρ εἰμ' dedi πάρειμ': vid. ad Æschyl. Suppl.

257. et Herc. F. 1237.

1226. Vulgo ἐγένετ' 'Αθηναΐος. Bentl. ἔγεντ': Elmsl. ad Ach. 978. m Auct. γένετ' εν γ'. Mox vulgo deest ήν.

1228. Vulgo δράσεις. Reposui κράζεις. Cf. Plut. 369. Σε μεν οίδ'

δ κρώζεις. Mox inepte παραπολεί.

1232. Vulgo ἄνθρωφ'. At Scholia exhibent ex Alcae ώνησεν ούτος, corrupte pro ανους ην τις ο: et ex ανους fit ανους i.e. ανθρωπος. Scripsit quidem Lyricus de tyranno, fortasse Myrtilo; qui

'Ανους ήν τις ο μαμνόμενος μέγα τι κράτος,) Schol. τάχα τρέψεις 'Αντοέψαι ταχὺ τὰν πόλιν· ά δ' ἔχεται ροπᾶς· 👂 et ἀνατοέψεις ταχέως.

At verba aliquantisper mutavit Comicus in 'Ο νοῦς δεν τις ὁ μαινόμενος, Anaxagoram ridendi causa; qui dictus fuit per jocum δ νοῦς, teste Plutarcho in Pericle p. 154. B. Nunc tandem intellige cur reposuerum 'Αναξαγόρας τε pro ξένος τις έτερος in v. 1221. Μοχ τὸ μέγα in μέγα τι mutatur. Sæpe τι sic reperitur post ὀλίγον, σμικρον, βραχύ necnon πολύ, et μέγα.

1235. Pro degias reposui iguos scil. penis. Cf. Vesp. 1382. τουδί λαβομένη τοῦ σχοινίου Ach. 1121. καὶ σὺ, παῖ, τοῦδ ἀντέχου ibid. 1215. τοῦ πέους ἄμφω μέσου προσλάβεσθ' ω. Edpolis apud Etymol. v. Κόντιλος sic legendus --- είμι· παῖς, σὺ δὲ Τούτου γ' δπισθεν καταλαβοῦ τοῦ κοντίλου: ubi puer aliquis cæcum hommem membro

illo, potius quam manu, ducebat.

1237. Bene sit Scholiastæ conservanti alterum versum τῶν δειλῶν δ' ἀπέχου γνοῦς ὅτι δειλῶν ὀλίγα χάρις. At cum ρίψασπις fuit Cleon, parum decuit Theorum illi ignaviam, exprobrare. As potuit idem amicus, cum vidit Cleonis amorem erga homines parum validos, illi in menioriam ι vocare vetus dictum ὅτι τῶν φαύλων ολίγη χάρις, quod et in animo habuit Plato in Symposio p. 320. G. Τοϊς μεν άγαθοϊς έκάστου τοῦ σώματος καὶ ὑγιείνοις καλὸν χαρίζεσθαι καὶ δεῖ --- τοῖς δὲ κακοῖς καὶ νοσώδεσιν αἰσχρόν τέ ἐστιν καὶ δεῖ ἀχαριστείν. Ad idem Scolion respexit Apollonid. Epigr. v. έξ δλίγων Igitur reposus φαύλων pro δειλών. Unde patet όλίγη χάρις. Theorum esse φαῦλον.

1228. Vulgo τούτω τί λέξεις σκόλιον άδικος έγω. MSS. ωδικώς, cum Fl. Clir. At Bergler. & Sixós: et sic Antiatticista-exponens per εὖ ἄδων. Rescripsi igitur λέγω pro ἐγώ. Paulo ante dedi δέξει vice λέξεις. At σ adhæsit e σκόλιον. Dein φανώ pro τούτω. Causa etemm non fuit cur Phanus suum Scolion onnitteret. Illud fuit haustum, ut e Scholiis conjici potest, e Praxilleis: quæ Poetria scripsit fortasse καλόν in eo versu, ubi restitui φανόν ob φίλον omissum: neque objici debet metrum; etenim φίλος primam producit

apud Lyricos.

1242, 3, 4. In his inest duplex sensus. Cleitagora, cujus Scolion est illud Χρήματα κάν βία, fuit ποιητρία Λακωνική teste Schol. ad Lys. 1239. Hinc quivis Λάκων dici potest Κλειταγόρας. At

Sellus fuit olim pauper; postea dives factus est, teste Schol. ad Av. 824., fortasse pæderastis nimis facilem se præbendo, muneribus Laconum corruptus: ideoque δέξεται σκόλιον Κλειταγόρας λακών "χρήματα κάν βία" utpote συμπότης—vel utpote Λάκων δέξεται χρήματα καὶ Κλειταγόρας [Spartanos] ἐν βία. Cum Scolio Cleitagoræ conferri debet Aristodemi Spartam dictum; cujus meminit Alcæus in Fragm. xxviii., sic legendo,

📆 Ως γὰρ δὴ τοδ ᾿Αριστόδαμός φησιν οὐκ ἀπάλαμνον ΄

" Σπάστα χρήματ' ἀνήρ· πενιχρὸς δ' οὐδὲν ῶν, λεγετ' ἐσλός."
Ubi οὐδὲν ῶν usurpatur ut μηδὲν ῶν in Ajac. 766. οὐδὲν ῶν ibid. 1218.
Tro. 1010. et οὐδὲν ἦν ibid. 1162. et οὐδὲν ἦτ' ἄρα in Iph. T. 569.
Spartani mentem expressit Horatius: virtus, nist cum re, vilior algaest, et Cleitagoræ χρήματα κὰν βία per suum rem facius, rem: Si

possis, recte; si non, quocunque modo, rem.

.244. Ε vulgatis 'Ανήρ σόφος μουσικός κᾶτ' ἄσεται, quæ nulla ratione conciliari possunt cum verbis Schol. ώσει μή σόφος οὐ δὲ μουσικός, erui 'Αντο δ' ἄσοφος κάμουσος 'Ακέστωρ ἄσεται. Ubi jocus est in δ ἄσοφος et δε σόφος necnon καὶ ἄμουσος et καὶ Μυσός. Etenim Acestor fuit malus poeta et Mysius, teste Schol. ad Av. 31. Οὐτός ἐστιν 'Ακέστωρ, τραγωδίας ποιητής, ἐκαλεῖτο δὲ Σάκας. -Θεόπομπος δε και τον πατέρα αυτοῦ Σάκαν προσηγόρευσεν Τισαμένω—ό δε αύτὸς καὶ Μυσὸν ἐκάλεσεν΄ εἰς δὲ τὴν ποίησιν αύτοῦ κεχλευάκασι, Καλλίας μεν έν Πεδήταις, καὶ Σάκον οι χόροι μισοῦσι Κρατινος εν Κλεοβοῦλοις 'Ακέστορα γάρ όμως είκος λαβείν πληγάς ἐάν μὴ συστρέψη τὰ πράγματα. Ibi Conicolum fragmenta sie lege—καλ Σάκαν "Ον οί χόροι μισούσι, et—'Ακεστοραμυσον είκὸς ἡν λαβείν Πληγάς, ἐὰν μὴ συστρέφη τὰ δράματα. Ubi luditur in 'Ακέστορα Μυσὸν et 'Ακέστορ' αμουσον. Idem lusus restitui debet Theopompo; cujus fragmentum servat Schol. ad Vesp. 1216. 'Ακέστερος-ος έκαλειτο Σάκος. Θεόπομπος Τισαμένω οὐ κοινώς ξένον άλλα Μυσόν τον δε Μύσιον 'Ακέστερον ἀναπέπεικεν ἀκολουθεῖν όμοίως. Lege—δν οῦ Κοινῶς ξένον άλλαμυσον οίδα Μυσίων, 'Ακέστορ' άναπέπεικεν άκολουθείν έμδι-καί, το πολίται, δεινά πάσχω. Τίς πολίτης δ' έστὶ σοὶ Πλὴν Αρσάκας ὁ Μυσὸς καὶ τὸ Καλλίου νόθον. Lege Πλὴν Σάκας Μυσός τ' Ακέστως καὶ τὸ— Inter quae άλλαμυσον est vel άλλα Μυσον vel άλλ' αμουσον. Σάκας et 'Ακέστωρ erant Mysii.

1246. Ad πολλὰ δὲ διεκόμισας adscripsit Schol. Τοῦτο, φησὶν, ἐπάξω πρὸς τὸ σκόλιον Αισχίνου, ἐπεὶ κομπαστὴς ἦν. Recte hoc. Ad Αν. 823. Τά τ' Αισχίνου γ' ἄπαντα monet Schol. ὅτι οὖτος πένης, θευπτόμενος καὶ αὐτὸς ἐπὶ πλούτω—καὶ λέγων ἐαυτὸν πλούσιον. Idem tuit, sicut Theagenes teste Schol. Αν. 823 ct 1126, dictus καπνὸς, teste Schol. ad Vesp. 324. unde, ut id obiter moneam, bene intelligas Vesp. 151. "Οστις πάτρος νῦν τοῦ καπνίου κεκλήσομαι. Haud male igitur ἐταὶ διεκόμπασας σύ γ' ἐκ καπνοῦ. Quibus verbis, fortasse e carmine quodam Acestoris desumtis, intelligi hoc voluit

Comicus, quod Acestor, jactationibus Æschinis inductus, cum profectus esset Thessaliam lucri causa, et rediisset inops, Æschinem incusabat et illum una cum vocibus ejus fumo comparabat.

1265 et sqq. πολλάκις δή δοξ' έμαυτο δεξιός πεφυκέναι, καὶ σκαιὸς ούδεπώποτε, άλλ' Αμυνίας ὁ μαλλὸς (Κρωβύλου δ' οὐ ζεῦγος ἡν) πεινη γάς, ήπερ Αντίφων αύτὸς, 🔊 γ' έγω ποτ' είδον ἀπό τε μήλου καὶ ροίας δειπνούντα μετά Λεωγόρουάλλα πρεσβεύων γας είς Φάρσαλον ώχετ' είτ' έκει μόνος μόνοισι τοις Πενέσταισιν ξυνήν, των Θετταλών

10

αὐτὸς ῶν πένης ἐλάττων οὐδένος. V. 3. Vulgo ὁ Σέλλου μᾶλλον οὐκ τῶν κρωβύλου. Αt monuit Schol. Selli filium esse Æschinem et non Amyniam: uterque tamen erant valde hirsuti, alter dictus Kompr-Amuvias in Vesp. 464. (ubi ineptit Schol.) ideoque hic dici potest μαλλός (—vel ή καθειμένη κόμη ut apud Euripid. Bacch. 113. λευκοτρίχων πλοκάμων μαλλοίς): alter quoque dici potest κρώβυλος, nt Hegesippus apud Hesychium sic ope codicis legendum: Κρώβυλος, ὁ μαλλὸς τῶν παίδων ἢ ὁ κόρυμβος: ἐκ πλοκῆς γάρ έστιν ή άνηνεγμένη [κόμη] άπὸ μέσου τοῦ μετώπου ἐπὶ τὴν κορυφήν· οὖτω δε καλ ο ρήτωρ Ήγησιππος—εκαλείτο. Potest quoque dici Κρωβύλου ζεῦγος, sensu duplici. Etenim fuit Κρωβύλου ζεῦγος, περιαte gerens duos cimium nodos: necuon Κρωβύλου ζεύγος catenus, quod zEschines et Crobulus erant par ignobile. Suid. Κροβύζου ζεύγος: έπὶ τῶν ἐπὶ κακία καὶ πονηρία σπενδομένων. Τοῦτο δὲ εἴρηται ἀπὸ κροβύζου πορνοβοσκού τινος, δύο έχοντος έταίρας ἐπὶ όλέθρω πολλῶν κροβύζου οὖν ζεῦγος ἐπὶ διασύρμω δύο ὁμονοούντων οῧς πρότερον τοῦ ἀναπνεῖν φασιν ή του κακουργείν παύσασθαι. Verum ibi emendatur Κρωβύλου ex Hesychio, Κρωβύλου ζεύγος. Παροιμία ταττομένη έπὶ τοῖς ὑπερβαλλούση κεχρημένοις πονηρία. Μετενήνεκται δε από πορνοβοσκού τινος. Ατ gl. habet Harpocration utilissimum ad emendanda Hesychii verba Ιιι Κρώβυλος -- οὐτω δὲ Ἡγήσιππος καὶ δηγγος ἐκαλεῖτο Κρώβυλος. Καὶ ό μαλλός τῶν αἰδοίων: sed Harpocration exhibet Κρώβυλος Αἰσχίνης έν τῷ κατὰ ΚτησιΦῶντος Ἡγήσιππος μέν ἐστιν ὁ Κρώβυλος ἐπικαλούμενος. At fuit olim ibi Κρώβυλος Αίσχίνης [μεν εν Σφηξίν] εν δε τώ κατά Κτησιφώντος 'Ηγησίππος ονομ' έστιν έπικαλούμενος: lege igitur in . Hesychio και Αισχίνης ζεύγος έκαλείτο Κρωβύλου. Unde intelligi. potest Σέλλου esse gl. ab ejus manu, qui bene noverat per Κοωβύλου ζεύγος innui τον Σέλλου. Haud male igitur ex μάλλον ούκ τῶν erui potest μᾶλλ' οἶον κόμων, qui tamen, μαλλὸς excepto, est interpretis fœtus, sicut ὁ Σέλλου. V. 4. Vulgo οὖτος. Λt non-Amynias fuit olim dives, verum Antipho: qui postea ad paupertatem redactus est; neque divitias iterum sibi comparavit; quod sanc

facere potuisset, si legationem obiisset. Vid. Schol. ad Ach. 66. et Casaubon. in Theophrast. περί βδελυρίας, ad verba τὸ μὲν ἐκ τῆς πολέως ἐΦόδιον. Hanc tamen se ditandi occasionem, adeo σχαιὸς erat Amynias, qui penitus negligeret. Ille enim Pharsalum missus, redusse videtur mops, infecta legatione. Id colligi potest e fragmento Eupolidis apud Schol. sic legendo Κ' Αμυνίας ἐκεῖνος: 'Αμελεῖ κλαύσεται, "Οτι, ατ' άγροϊκος, Ισταται πρὸς τὰ μορίων. Παθέων δ' ε̈νεχ' ων ἔπλευσε, κακὸς ων εἴσεται. Ubi deest ατ' ob ατ: at id redde utpote: mox e τω μοριώ οτι θεων ενεκα επλ-erul τα μοριών παθεών ενεκ ων επλ—. Etenim Amynias res facere voluit, sed perficere nequivit, utcunque κατά τὰ μόρια crinitus. Unde de Amynia fit proverbium. Οὐδεὶς χομήτης, ὄστις οὐ περαίνεται—vel ψηνίζεται. Fam tamen se ditandi occasionem non neglexit Æschines. V. 3. μήλου και ροιᾶς inquit Schol. ἐπὶ τῶν δαψιλῶν ὄψων—ineptum igitur est ἀντί: quasi Leogoras aliquid pro cibis lautis suffecisset, qui fuit gulæ perdite Reposui igitur ἀπό τε. V. 10. Vulgo πενέστης contra metrum et sensum. Collato Suid. v. Πενέσταις, vide annon præstet Πενήταισιν prop'er lusum vice πενέσταισιν.

Hen serius piaculum!

Properate sæclo quæ laboranti decus Hoc parturitis tempora;

Vosque hac minori vindicem cum tædio Manete vestrum principes.

CAUCIIY

ON THE

SAPPHIC AND ALCAIC METRES.

No. IV .- [Concluded from No. XXX. p. 237.]

It is more easy to ascertain the existence of a metrical law, than always to be able to assign a reason for it. I suspect, however, that a monosyllable is required after a Penthiminer in order to break and disguise the trochaic measure of this colon, which without this art, and the help of this cæsura, would be very weak, and too simple, as

At- | tollat iras | montiumque Burton's opusc. p. 20.

On the contrary, if the colon conclude with an Iambic Penthimimer, and be not preceded by a monosyllable, it would have the defect of beginning and ending in the same manner, in different verses, a consequence that may always be avoided in a colon properly constructed by a careful reader. In the line

Et Faustitas | affusa circum, Ib.

it is very difficult not to pronounce the two concluding words as an lambic Penthimimer; but the lines,

Consulque | non unius || anni, and De gente | sub Dio || moreris, are capable of being read, like

Testatur | auditumque || Medis, and Non ante | devictis || Sabææ,

and the Iambic Penthimimer disappears.

The colon therefore is so constructed, that an Iambic Penthimmer may be heard at the beginning, but never at the end. A good reader may redeem the Horatian colon

Hunc Lesbio | sacrare || plectro,

by reading it in this manner

Hunc | Lesbio-sacrare || plectro,

and then the Iambic Penthimimer is no more perceptible at the lose, than in

Non | decoloravere | cædes. Lib. 2. O. 1. v 35.

The very defective line of Buchanan

Pallor, | tremor, terror, | pavorque. Miscell. Od. 3.

may be read like

NO. XXXI. Cl. Jl. VOL. XVI. D

Visam | pharetratos || Gelonos,

and thus the Iambic Penthimimer at the close may in a great measure be smothered. But a quadrisyllable at the beginning, as

Agnoscito | cultu | timendum. Burton's Opusc. p. 21.

i. a hopeless case, and affords no possibility of escape from the concluding Penthimimer, nor do I know any good line at all analogous to it.

Perhaps Horace had another aim than to avoid the appearance of a Penthimimer at the close, and that is, to tie together the trochaic feet.

We have seen, that when the first Ditrochee terminates a whole word, the second Ditrochee must begin with a monosyllable, and thus suffer a Cæsura.

But the more agreeable form is when the two Ditrochees are tied

together, and this is done in two ways:

First, by making the first trochaic or first foot of the first dipodia terminate a whole word, and then by connecting the first cr second syllable of the subsequent Ditrochee with the spondee of the first Ditrochee, by a trisyllable, or monosyllable and dissyllable, or by a quadrisyllable, or monosyllable and trisyllable, as

Virtute | me involvo || probamque
Seu voce | nunc mavis || acuta
Devota | non extinxit || arbor
Culpante | nunc torrentia || agros
Urgentur || ignotique || longa. L. 4. O. 9. v. 27.

Secondly, by beginning the verse with a monosyllable, or dissyllable, or two monosyllables, and by comprehending either the whole or the three last syllables of the first Ditrochee, and the first or second syllable of the second Ditrochee, in one polysyllable word, as

Sylvæ | laborantes || geluque Raro | antecedentem || scelestum Sedes | Atlanteusque || finis Nunc in | reluctantes || dracones Non | decoloravere || cædes.

All the verses of Horace are reducible to one or other of the three kinds just mentioned. But it is observable that every color requires a double pruse, a weak and a strong pause.

The first sort have both pauses fixed, the weak on the 5th

syllable, the strong on the 6th.

In the second sort, the weak pause is fixed on the 3rd syllable, and the strong may be either on the 6th or 7th.

In the third sort, the weak pause may be either on the first or second syllable, and the strong on the 6th or 7th.

Among the last sort, may be found some of the most agreeable verses, and the second sort are more pleasing than the first. The

second sort, as they suit most words, are by far the most numerous, and of this sort, for the same reason, those colons, that have the pause on the 6th syllable, are more numerous than those that have the panse on the 7th. There is an ingenious and useful table of all the allowed forms of this third verse in the Classical Journal, No. xxii. p. 352.

I will introduce here a similar table accommodated to my divi-

sion of the verse.

1. A -- - |- |- |- Te triste lignum | te || caducum. 2. B. — U — Unguenta | de conchis || quis udo.
2. b. — U — Utanque | defecere || mores.
3. D. — | U — || U — Non | reluctantes || diacones.
3. E. — | U — || U — Portus | Alexandria || supplex.
3. F. — | U — || U — Non | decoloravere || ca des.

It is evident from the preceding scheme, that the strong pause falls invariably either upon the first or second syllable of the second Ditrochee.

It is somewhat singular that, although an elision is not allowed at the strong pause in the colons like A, it is admissible in the colous like B, as,

Fortuua | cum stridore || acuto.

But this verse in Buchanan

Vocabit in jus | orbem || ab ortu Ps. 50

is without any authority.

Indeed this verse labours under another defect, and exhibits a Monosyllable in the centre, which intersects and confounds all the preceding schemes of Scansion. It nevertheless frequently occurs in modern Poets, as

Non Indico qui stridet arcu, Musæ Cautab. p. 39. Per dirutas jam sævit urbes, Ib.

Custodiam ponto incubantem et, Ib. 94.

Quascunque Phryx hine inde plantas. Burton's opuse. . 322.

Quis asseret, quis tradet igni, Misa Anglic. p. 179.

The last line in the Alcaic Strophe of Horace exhibits four forms. In three of these forms the dactylic Metre is connected with the concluding Ditrochee; in the other, it exhibits the Ditrochee detached from the dactylic measure. When connected with the Ditrochee, it has a pause upon the first syllable of the Ditrochee, as

Flumina constiterint | acuto. L. 1. O. 9. v. 4.

or upon its second syllable, as

Nec veteres agitantur | orni. Ib. v. 12.

Or upon the first syllable of the second dactyl, as

Divitias | operosiores. L 3. O. 1. v. 48.

When the dactylic measure is separated from the Ditrochec, there is always a double pause, a weak one on the first syllable of the second dactyl, and a stronger on the close of the second dactyl, so that a dissyllable constantly intervenes between the two pauses.

Post equitem | sedet || atra cura. Conjuge me | Jovis || et sorore. Regum apices | neque || militum arma.

I only know of two exceptions to the preceding forms, and they are capable of explanation. One is,

Fallere et effugere est triumphus,

but the elision here in some measure satisfies the ear, and effugereest is to be read together as one word; and then this line is like

Flumina constiterint | acuto.

In a similar manner the line

Sors exitura et | nos || in æternum

is not to be renked among the lines beginning with a quadrisyllable, but exitura et is to be considered as coalescing, and then this line resembles

Vix illigatum | te || triformi.

The other exception is,

Nominis Asdrubale inter-emto,

which may be reconciled by a tinesis of the compound, and then it would appear like

Longius invidiaque | major L. 2. O. 20. v. 4.

The following lines exhibit a trisyllable, where Horace invariably uses a dissyllable.

Nec meritæ | decora || alta famæ. Musæ Cantab. p. 12. Ætheriæ | Omina || lausta flammæ. Ib. p. 16.

I now pass to the subject of hiatus, or rather the elision of the long vowel in Latin, as the Latin language in this respect differs from the Greek, and requires all vowels to be elided. Horacc has used in this metre nearly the same caution as in the Sapplic. He chiefly elides the long vowel, where it is least perceptible, at the pause, or before a monosyllable, particularly at the end of a pause, or colon, as

Quo Styx et invisi | horrida Tænari Vitamque sub Dio | et trepidis agat Neglectus incesto | addidit integrum Marti redonabo | illum ego lucidas Faire pio | et saliente mica Sæpe mero | incaluisse virtus Vim stomacho | apposuisse nostro Vulcanus hinc Matrona Juno et. Decedit æratå triremi et
Judex honestum prætulit utili et
Quando et priores hinc Lamias ferunt
Vultu et per obstantes catervas
Juno et Deorum quisquis amicior
Seu te in remoto gramine per dies
Vino et lucernis Medus acinaces
Descende cælo et | dic age tibia
Matura virgo et | fingitur artubus
Jamduduni apud me est | eripe te moræ.

The following elisions do not fall under the same predicament as the preceding:

Virtute më învolvo probanque
Tu lene tormentum ingenio admoves
Miles redibit flagitio additis
Ritu feruntur nunc medio alveo
Vis consili expers mole ruit sua
Relinquit ales nequitiæ additis.

In all the preceding instances there is one general characteristic, that the elision of the long vowel takes place only upon a long syllable. When this elision takes place upon a syllable required to be short, it is quite a different case, and of such an elision, I believe, not more than two instances can be found in all the Alcaic Odes of Horace; and in both these instances the elision is before a monosyllable, and at the beginning of the verse, where licences most frequently occur. They are,

Ut tuto ab Afris corpore viperis. L. 3. O. 4. v. 17. Tentabo et arentes arenas. Ib. v. 31.

It may be observed too, that the first instance is in the first colon of the Strophe, and that both occur in a very long Ode, longum melos, as Horace himself calls it. Perhaps too, the o in tentabo may be thought common. Our grammars, I think, call it so, and dăbă is the termination of a dactyl in Catullus. But as dabo makes dăbăs, and dăbăt, it is not quite analogous to tentabo, and, I suspect, it will be difficult to find good authority for making the o short.

I shall now leave it to others to determine how far the following clisions are consistent with the usage of Horace.

Sic nymphæ eoæ per morientium. Musæ Angl. v. 2. q. 38. Potandi ävente porrigit ubera. Ib. p. 172. Gratare | Constantino || ŭtrique. Ib. v. 1. p. 1. Tot vestri amoris pignora deleat. Buchanan. Miscell. Od. 3. Vulgi humiles tenuis querelas. Ib. Od. 4.

^{*} Contrary to the generality of grammarians, Dr. Valpy, in his Latin Grammar, joius o final with a, i and u, as long, in the general rule. He is certainly justified by the practice of the Augustan age.

Cessere saltus pinguidi et Alpium. Ib. Odc 1. Nelsoni inhærens gloria viribus. Musæ Cantab. p. 77.

Catullus seems to admit without much scruple the elision of a long vowel before a short one, as

Et corpus evirastis Veneris nimio odio. Carm. 61. v. 17. Furibunda, simul anhelans, vaga vadit, animo egens. Ib. v. 31.

But Horace would have thought it no compliment to have had his lyrics compared with those of Catullus.

It remains only for me to speak of the final syllable of the different colons of the Alcaic Strophe. The four colons of this strophe, like those of the Sapphic, form together but one line, and therefore a hiatus of a short vowel at the end of each colon is not admissible. There are, I believe, in all the odes but two examples to the contrary, namely,

Dii me tuentur, Diis pietas meă || Et Musa cordi est; Hic tibi copia L. 1. O. 17. v. 15. Spargisse nocturno cruoie || Hospitis ille venena Colcha. L. 2. O. 13. v. 7.

In the third verse, not only is the hiatus of a short vowel forbidden, but an clision is permitted, as

Sors exitura et nos in æternum || Exilium impositura cymbæ. I., 2. O. 3. v. 27. Cum pace delabentis Etruscum || In mare nunc lapides adesos. L. 3. O.29. v. 56.

This licence, which Horace has used only twice in his four books, his imitators do not scruple to employ as often in a single ode. They have improved likewise upon their Original, and, while Horace has elided only a trisyllable, they elide a dissyllable, and quadrisyllable. Nor have they stopped here, but some of them join the two last colons of the strophe together, in imitation of what is allowed in the concluding verses of the Sapphic Strophe, a liberty wholly without example in Horace. He never makes the concluding word of one colon in the Alcaic Strophe extend itself into the succeeding colon, so as to create a junction of the two; and all those, who do not aspire at a higher degree of eminence, than what Horace has attained in this Metre, will do well to be satisfied with his standard.

It may be seen from a review of the versification of Horace, what infinite labor he took to adapt the Latin language to the expression of the Greek lyrical measures, especially those of Sappho and Alcæus; verba sequi fidibus modulanda Latinis. His Alcaics alone constitute one fourth of all his lyrical compositions, and it is upon his success in the structure of his odes in general, but particularly of his Alcaic odes, that he builds his expectation of immertality. I will draw together several scattered passages to this effect, as so

many records of himself, and of his own efforts to establish a right to the high title of a lyric poet.

——neque tibias

Euterpe cohibet, nec Polyhymnia

Lesboum refugit tendere harliton.

Quod a me Lyricis Vatibus inseres,

Sublimi feriam sidera vertice. L. 1. O. 1. v. 33.

Neu forte credas interitura, que, Longe sonantem natus ad Aufidum, Non ante vulgatas per artes Verba loquor socianda chordis.

Poscimur, si quid vacui sub umbra Lusimus tecum, quod et liune in annum Vivat, et plures; age, die Latinum, Barbite, carinen,

Lesbio primum modulate civi. L. 1. O. 32. v. 1.

Hunc fidibus novis,

Hunc Lesbio saciare plectro,

Teque tuasque decet sorores. L. 1. O. 26. v. 10.

Dicar, quà violens obstrepit Aufidus, Et quà pauper aquæ Dannus agrestium Regnavit populorum, ex humili potens Princeps *Eolium* carmen ad Italos Deduxisse modos. Sume superbiam Quæsitam meritis. L. 3. O. 30. v. 10.

Sed, quæ Tibur aquæ fertile præfluunt, Et spissæ uemorum comæ, Fingent Æolio carmine nobilem. L. 4. O. 3. v. 10.

Totum muneris hoc tui est, Quod monstror digito prætereuntium, Romanæ fidicen Lyræ. Ib. v. 22.

In his epistles he harps upon the same string:

Ac ne me folis ideo brevioribus ornes Quod timui mutare modos, et carminis artem. Temperat Archilochi musam pede mascula Sappho, Temperat Alcaus. L. 1. Ep. 19. v. 26. Discedo Alcaus puncto illius. L. 2. Ep. 2. v. 99.

The sense of his own superiority in metrical attainments is not less discoverable in the success and covert attacks which he makes upon the rude and inartificial numbers of Lucilius, Plautus, and others.

Nempe incomposito dixi pede currere versus

Lucili. L. 1. Sat. 10. v. 1.

At vestri proavi Plautinos et numeros et

Laudavere sales. De Arte Poet. v. 270.

Quani non adsiricto percurrat pulpita socco. L. 2. Epist. 1. v. 174.

It must be owned that he has himself set a most successful example of that polish, and unwearied aim at perfection, which he so strongly recommends to others:

Nec virtute foret, clarisve potentius armis Quam linguâ Latium, si non offenderet unum-Quemque Poetarum limæ labor, et mora. Vos O Pompilius sanguis, carmen reprehendite, quod non Multa dies et inulta litura coercuit, atque Perfectum decies non castigavit ad unguem. Ib. v. 289.

But although in the structure of his versification the art of Horace is consummate, it is no where apparent and obtrusive, and in the midst of all his chains he displays a grace and freedom that are truly captivating and surprising. It is this laboured ease, this studied negligence (curiosa felicitas) which Petronius has seized as displaying the genuine character of the Muse of Horace. Whoever expects to arrive at the same success must submit to the same severity of discipline,

Ludentis speciem dabit, et torquebitur.

At the same time, these restraints, instead of suppressing the powers of genius, rather serve as a stimulant, and open a field for the exhibition of taste and refinement, and for the truth of this, I may appeal to experience; and it will be found that among the modern imitators of Horace, those, who make the nearest approach to his purity of versification, appear to have caught most also of his manner and spirit.

In proportion as metrical science advances, the merit of the ancient poets becomes more conspicuous, and an additional charm is elicited from the perusal of their compositions which was not perceived before. Notwithstanding the light that has lately been thrown on this subject by Dawes, Bentley, Burgess, Huntingford, Porson, Burney, and Tate, many of the ancient poets have still reason to complain,

Non apparere labores
Nostros, et tenui deducta poemata filo.

J. B. M.

A CRITICAL

Examination of certain modern opinions respecting the TROAD, and the descriptions of HOMER; and an inquiry into the authorities on which they have been founded.

BY CHARLES H. PARRY, M.D., F. R. S., &c.

No. II.—(Continued from No. XXX. p. 349.)

The Rivers of the Troad. The Scamander flowed into the sca where this formed a wide bay, (εὐρὺς κόλπος, Φ. 125.) All the epi-

Chevalier's references in favor of the "rapid Simois," are to Il. xii. 1, 22. xxi. 301. which passages are, however, totally silent as to this quary.

It would be fortunate for the progress of civilization and happiness, if the ill effects of prejudice were never more productive of injury than in their bearing upon the present discussion, and could as safely furnish topics for ridicule and amusement, as they will be found to do in relation to the paltry streams of Simois and Scamander. To what efficions of the imagination, to what rejection of all authority, and perversion of palpable and intelligible sense, has this baneful passion given rise upon the present occasion! "Chevalier and Liston, (observes Mr. Dalzel, Plaine de Trois illustrated T. R. E. S. iv. 49.) crossed the Scamander on a willow!!" This is a happy instance of complacency under an imaginary conclusion deduced from false premises. He adds: "the account of the Scamander by Chevaher and other respectable travellers answers perfectly to all the descriptions and hints to be found in the Iliad; allowance being always to be made for the poetic way of representing such things." As after many careful examinations of all the parts of the Iliad relating to the Scamander I have never been able to discover a hint of correspondence with the de scriptions to which allusion is here made, I am happy to add my testimon in favor of the full allowance that must always be made to the influence of a poetical imagination. Professor Heyne, however, far outstrips all conpetition. Motalem in divisit. (viii. 490.) "What river (says the Professo) could this be? The Scamander is termed diring, eddying; but the Simo was still more so. Yet if the Scamander had its course obliquely through the plain, it must be the river here intended." Whence all this doubt at astonishment? Is not the Scamander always so described? Do we eve meet with a similar account of the Simois? Does not Homer himself in us this river was the Scamander?

thets connected with it are expressive of the size and violence of the stream, and distinguish it as $\mu \epsilon \gamma as \pi \sigma \tau a\mu \delta s GaOud \epsilon \gamma s$ (Y. 73.) in opposition to the Simois the negative qualities of whose current entitle it to the honours of no adjunct. The Edinburgh Reviewer, following up Prof. Heyne's views, gives us probably the real sense of a passage which has in all times been adopted to prove the insignificance of the Scamander. It does not appear, indeed, that Homer formed a bridge across the whole channel with his single elim. The $\mu \delta \nu = a \delta \tau \delta \nu$ (Φ . 245.) can have but two antecedents, $K \rho \eta \mu \nu \delta s$ or Achilles, under the use of either of which it can have no reference to the opposite bank. The contrary supposition has long remained the seemingly unanswerable argument in proof of the narrowness of the stream, and the inconsistency of Homer.

That the Scamander was south of the Simois, appears from the circumstance that, in her way from Olympus, Juno first reached this latter river, and fed her horses on its banks.

The ford of the Scannander was between Troy and the Greek a camp (Ω . 692. Φ . 1. &c.) Homer gives us no information as to the existence of, or necessity for, any other fords, either on this river or the Simois. Much, however, has been presumed on this subject by modern authors. According to Major Rennell's Map (11.) the night adventures of Ulysses and Diomed must have been impossible. We know from Homer that they did not cross at the ford of the Scamander, as this

An author who considers the parties by we (vii. 47.) in connexion with Ide, o allule to "fallow deer," may say any thing (p. 60.) It is curious hat this rapid, eddying Simois, this impetuous river should be dry in the ummer, except under occasional rains. (101) The same fate attended he unfortunate Scamander, notwithstanding all the distinguishing epitets of Homer. Chevalier (p. 21) talks of the dry channel of the hamander. The willow bridge was surely a superfluity which might have ben spared!

If the observes (Not. in II. 4. 245, 6.) " years of all all is in upon Autum: proprie is qui jungit utramque ripam tanquam ponte, nunc saltem intermalized qua ille in ripam enteretur, ulmo in alveum prolipso, tantadem enisus ex alveo Achilles, &c. &c." Remail explains the passage be saying the river bed was at that time only filling, an explanation scarcely dequate to the known depth and violence of the stream, at the period of the consideration. On years, see Heyne, Pindar, note 15th. viii. 111.

The Simois, says Rennell, note 57, must have been in the way between the Grecian Camp and Troy, though never said to oppose an obstacle, (see alsthe note which follows.)

was in the rear of the Throsmus, upon or near which the Trojan army was encamped, and yet, in order to reach the Thracians, they must actually have passed two rivers, and driven the chariot of Rhesus across both, on their return.

One part of the Scamander ran on a side of the plain opposite to, and at a distance from, that on which the tomb of Ilus was placed. During the pursuit of the Trojans by Ajax across the plain, (A. 496. &c.) Hector was at a distance on the left, and on the banks of the Scamander. An additional proof, that this was on the right of the Greeks, may be drawn from the fact, that on the side opposite to that on which Hector was engaged, Paris from the column on the tomb of Ilus had wounded Diomed, and thus given occasion to the subsequent achievements of Ajax.

Notwithstanding all that has been said by Dr. Vincent, Whitaker, Dalzel, Heyne, &c. and notwithstanding the abuse with which they have visited Strabo, and the silly apologies made for Homer himself scamander had its source in Mount Ida. No explanation of an ap-

The same unnecessary confusion has been admitted with regard to the source of the Scamander, as with regard to its attributes. Prof. Heyne will admit neither Homer nor Strabo as good authorities. "Wood," says he. (Pref. to German Ed. of Chevaher,) "did not pélecive that Demetrius of Scepsis, whom Strabo follows, builds in the instance of the sources of the Scamander on mere hypothesis. Demetrius, I imagine, founded it on an erioneous interpretation of Il. xii. 18, &c. which he understood geographically, without considering that he had before him a poet, not a geographer." The lines in question enumerate the rivers

"Оσσοι สะที่ไม่สิสโพท อีวูย์พท ฝีกิสฮิย สาการ์งบอน.

This is specific enough. Heyne, (Exc. in Lib. vi. 301.) makes a tolerably successful attempt to save Homer's credit. "Scamander ex Ida procurrisse dicitur, (xii. 21.) inter alios amnes ex Ida ortos: Rectu, etsi infia urbem ortus, siquidem Idæ radices ad plagam littoralem pertingebant, nisi totus ille locus a scriore Rhapsodo subtextus est." Again, "Dictus utique nomine alter Simois, alter Scamander; ille de montium jugis torrentis more, aquarini colluvie auctus, interdum alveum summ evagatur. Scamander limpidus et plucidus per herbosa loca defertur, &c. &c. Omnino in hoc saltem amne patet quantum poeta sibi indulserit in veris quoque ornandis, adeo magna et mirabilia sunt quæ de eo memorat!!!" I must be allowed one more passage as to the size of the river. "Quod Scamander, exiguus amnis, vorticosiis appellatur, mirationem excitat: δινήνντα tamen dictum vidimus aliquoties jam, B. 817!" (Var. Lectt. and Obss. in Il. xx. 73.) See also not. in Il. ©. 490.

Both on the size and sources of the Scamander, Rennell has set at rest a

parent difficulty can be more natural than that supplied by the illustrious geographer last mentioned, and since admitted by many excellent critics in the disputed passages X. 147.

Κρουνώ δ' ίκανον καλλιββόω, Ενθαδε πηγαί Δοιαί άνατσσουσι Σκαμάνδρου δινήεντος.

It may be remarked here that Κρουνω and Πηγαί are distinguished. At X. 208 we have Κρουνούς alone. On 147 the scholiast observes of this word "κυρίως μέν αι άρχαι των ρευμάτων, νῦν οι τύποι πω πλυνουσιν." They may be basons of running water derived from two springs which feed the Scamander. 'Αναίσσω frequently occurs in Homer, and does not always signify rise or apring up. At Δ. 114. It seems to express rush upon. Paris is on the ground, and the Trojans are apprehensive lest the Greeks ἀναίξειαν, should rush upon him before he has discharged his arrow. At Y. 733. though the combatants are on the ground, it may as easily be explained rush together, as rise up; and at O. 80. it seems only to signify springs, bounds, or rushes forward. There is certainly no precise authority in Homer for considering these two springs as the original sources of the Scamander. In the whole long

question, which, had there been less credit to spare, could never have been safely agitated.

The following observations of Prof. Heyne relate to the Simois chiefly. "The Trojan encomposent is accurately delineated. (X. 415, 428) The troops extended themselves down to the sea. Probably the right wing of the Trojans pointed on the north towards Rheteum beyond the Simois. At the outermost extremity lay the new arrived Thracians and Rhesus. This must have been towards the sea, or the mouth of the Simois, and farther out before the Trojan army towards the Grecian camp; for Ulysses and Diomed who surprised them went along the stream of the Simois. Homes does not take notice of their passing the river. This, however, they might have done." Indeed, it may be added, Homer does not give any authority for these suppositions. The reeds and tamarisks may have grown on boggy land, not immediately contiguous to the river. From the same argument it might be proved that Troy itself was immediately on the banks of a river, as (Od. xxiv.) we learn that reeds grew also close to Tray's lofty wall. In answer to a remark of Rennell, it does not appear from Homer that Diomed and Ulysses "passed the host before they reached the Thracians;" for though at K. 433, it is said El γκο δη μίματον Τρώων καταδύναι έμιλον, &c. It appears from 469, that they only actually passed did a' inter sal miles alus, and then alls reached the Thracian auxiliaries.

1 Κρουνώ, though its obvious derivation is from κρούω, pulso, &c. may have a relation to κρόνη, from κραίνω, &c.

controversy which has been carried on respecting the merits of the modern discoveries, nothing is more astonishing than the facility and indifference, nav the eager devotion, with which Dalzel: Whitaker, Vincent, and even Heyne, have adopted the errors of Chevalies respecting the μέγα κύμα of the Simois, and the supposed blunders of Strabo and Homer. It will scarcely be believed that these profound scholars should have built so many important consequences on premises with which the poet is positively unacquainted. So far, indeed, is Homer from warranting their assertions, that he cautiously avoids every hint which may connect any character of power with his description of this stream. The everlasting "silver Simois" of Pope. however innocent, is just as superfluous as the "gentle" Xanthus is unnatural and adverse to the truth of history. It is somewhat singular that Mr. Bryant (Observ. on Morrit. p. 59.) should object to Chevalier and Dalzel the non-existence of a passage, relating to the Simois, which, though not in the seventh, may be met with in the twelfth Book (M. 22.) but this is not half so singular, as that Prof. Dalzel should derive from this very passage the peculiar character he has assigned this river. The acute Bryant should, however, have had no occasion to surrender the passage, P. 308. He certainly needed not to have considered this whole description as an unserviceable poetic fiction, nor to have confessed that no argument could have been drawn from an apologue. I cannot help thinking that this very apologue proves the point in question, the insignificance of the Simois. Under his customary feeble state he was little able to assist his brother Xunthus, who, therefore, intreats him to call in extraordimary means for increasing his tide. Chevalier (p. 104.) was obliged to admit that his Simois, except when assisted by rains, was dried up in the summer season. What torrents must have fallen in the spring or summer, (the season when the banks were covered with flowers) of the tenth year of the Trojan war! The Edinburgh Reviewer, (vi. 267.) makes an ingenious application of the simile, Ф. 257, by supposing that Achilles opened the flood-gates, and turned the course of the stream. Now though this is very far from being "evident,"

Rennell says: "Its bed must have been empty, or very scantily filled when the Scamander calls for its aid." I have omitted to remark in its proper place that this author does an evident injustice to Chevalier, when, at p. 91., he supposes the Scamander of Chevalier not to intervene between the Grecian camp and Troy. He might have known that the great real or supposed discovery of the Frenchman was the ancient channel which did so intervene, and thus appeared to solve all previous difficulties.

there is ground for believing that Homer occasionally involved a more precise meaning in his ornamental descriptions, than is usually imagined.

There is no reason deducible from Homer, which necessarily lead. to the belief that the confluence of the two rivers was in the neighbourhood of Troy. Mr. Bryant derives his supposed contiguity from the passage, E. 773.

'Αλλ' ότε δὲ Τροίην ίζον, πυταμώ τε ρέοντε.
Ήιχε ροὰς Σιμόεις συμβάλλετον ήδὲ Σκάμανδρος.

In the first place, however, it is assuming too much to suppose that Tpoint refers to the city. Secondly, little can be proved from the mere arrangement and contiguity of the words. It can be proved in various instances that the mere poetical collocation was never intended to convey any precise meaning. This may be seen at II. 397, where it is said that Patroclus turns the Trojan phalanxes to the ships and river and wall. If we were to insist upon the propriety of the arrangement, E. 773. it is evident that more would be proved than is required, for in the journey of the goddesses from Olympus, Troy would be nearer the sea than either of the rivers.

In his argument (P. 61. Obs. on Vind.) Mr. Bryant has, singularly enough, omitted all reference to a neighbouring passage by which Homer seems to have pointed out the general relation of places. Juno expressly declares (at 791.) that the battle was $\tilde{\epsilon}\kappa\alpha\theta\epsilon\nu$ $\pi\delta\lambda\omega$, and though she had left her chariot behind her on the banks of the Simois, we have no authority for the supposition that she had travelled far to the spot where the Grecians were engaged.

In proof of the high confluence of the rivers, Major Rennell (59, 60.) says: "Achilles, after the dast battle, crossed the Scamunder, and that below the conflux, he it where it might, otherwise by what road could the Simois have come to its assistance." To this argument there is a safe reply in the remark that it might have travelled the same read as that which the Scamander had itself chosen to inundate the plain, that over its banks, which to the Simois would have been as easy above as below the confluence. "He was in pursuit," continues Rennell, "of a flying enemy, whose army had been drawn up with its right extending to the monument of Ilus, (for it was on the Throsmos) and who had probably been pursued to some distance in the way to Troy before Achilles crossed the river." Nay, Achilles probably crossed the river at the ford, (4. 1.) before the army reached the tomb of Ilus, and therefore close to their own encampment. At the ford, or as I interpret it, after passing the ford, Achilles divides the Trojan fugitives into two parties; one he

pursues towards the city; another afterwards, in order to escape his anger, plunges into the river. He follows them, and his principal actions occur in the Scamander, which, however, he never crosses again. He returns by means of the elm into the plain which he had left. The current of the inundation must have been in a direction contrary to the natural course of the stream, as it pursued him towards the city. No proof as to the exact place of confluence seems deducable from any of the circumstances hitherto mentioned. "But," says Reunell, "there is one still more in point. Juno and Minerva alight at the conflux with an intent to interfere in the first battle; in which the Trojan army was drawn up at the monument of Batisea or Myrinna, in front of Troy, not far from the Schean gate, (59, 60.) One must conclude the Poet would let them down near the field," &c. Admitting that the goddesses descended at the conflux, and that this was near the field of battle, I have already shown that this field was expressly said to be εκαθεν πόλιος, at a distance from the city, and in absolute contradistinction to the neighbourhood of the Dardaman or Scæan gate, which, when Achilles was with the army, the Trojans never quitted. The conflux would then under this supposition have been also εκαθεν πόλιος. Nothing is proved even by these passages as to the locality of the conflux, though the distance of the action from the city is sufficiently determined.

I shall conclude this subject with the general remark, that nothing can be more doubtful than the whole theory of the confluence of the streams. With numberless arguments against the supposition, there

According to Rennell's plan 11. his present course of the Mender, and present summer course of the Shemar or Simois, would fulfil all the purposes of Homer, without any necessity for assuming this very doubtful confluence of the two streams.

Prof. Heyne "formerly thought it probable that Homer meant only a very near approach of the two rivers, not an entire confluence of their streams; but this opinion he had long abandoned." He adds: "it is a perplexing circumstance that neither in the advancing, nor in the retreat, of the armies, is any express mention made of so important a circumstance as crossing the river. Almost all the passages, except perhaps the last, imply that the rivers run on each side." (xvi.) Even in his Homer this author considers it as doubtful, "Poterat hoc de loco accipi in quo propriores sibi fiunt devergentes ad interiorem campiim duo fluvii, ex alticribus locis hine et ande procurrentes, sin vero de commistis, &c. accipiendum," &c. &c. Exc. ad Lab. vi. I may remark that we know little about the faxibipates, except that it reached from the ships to the plain and back again, the circumstances of the race prove it to have been of a considerable extent. Does not this fact remove, in some respect, the possibility of the junction of the rivers?

is but a single word in a single line of Homer, which might render it probable that he wished to describe a real junction of the waters. To me this line never furnished any such evidence, (E. 773) and would have just as correct and as philosophical an interpretation, if translated: "When they reached the Troad and the two flowing rivers, that quarter of the country where the Simois and Scamander roll together with parallel or neighbouring currents, into the sea." In the descent of the goddesses from an aerial position, this junction and neighbourhood might be described as appearing more near than it really was, and it may be questioned whether συμβάλλειν does actually imply this union of their waters. Of the Thymbris, Thymbræ or Thymbrus, Homer makes no mention, unless the προς Θύμβρης, Κ. 430, e.plained by the Scholiast, the Thymbræan Plain, so called from Thymbra a place in the Troad, can be converted into this river. The Hellespont.' It cannot be shown from Homer that the fable

which is supposed to have given its name to this sea was known in

Rennell gives us no opinion on the subject of the Hellespont. He says, (p. 2.) "The Promontories of Rhætæum and Sigæum, with the discharge of the confluent waters from Ida, by an opening between them, are unerring guides to the plain of Troy; hence there is no other river or plain that opens to the Hellespont from Ida." Is not this to assume the disputed position of the Hellespont, and to give a place to the river no where assigned it by Homer? Rennell himself (p. 70.) only considers the place implied.

Heyne (and who would not rejoice in an agreement with this critic?) observes, (Ess. on Top. of Il.) "Homer always places the camp on the Hellespont in the more extensive signification of that term, as meaning the northern part of the Ægean sea, (Il. xviii. 150. xxiv. 346. Od. xxiv. 82. Il. vii. 86. xii. 30. xv. 233. xxiii. 2.) and hence should be derived the explanation of the epithets what's and anipur, &c." See also not. in Il. H. 86. P. 432. Q. 545. Whether the denomination Hellespont was derived from Έλλὸς Greece at large, (as Pindar Pyth. vii. 7. x. 29. ii. 111.) or from Ελλὸς the province or city, (Strab. Lib. ix.) or from Helle, or had, as is most probable, an Asiatic derivation, cannot be ascertained. Dionysius Perieg. 515. has the στοινωπόν είδως 'Αθαμάντι ς "Ελλης, where Sestus and Abydus are placed on opposite sides. At 131, 5, he speaks of Alyaiou πόντου πλατύν πόρου, which ends at Tenedos, and at 821, of the μίγαν Ελλήσποντον, on which Eustathius סשפריפש " שׁהוֹפְ דַלֹּי בְּנֹיְמָשׁי וֹיְדִינוֹ דֹמֹי האתרבוֹי באאינדהסידסי באאינדהסידסי באלינה באאינדהסידסי באאינדהסידסי בי ניסדושרופסי דים באאינדהלים சம்." Again, from Mysia the immense elbow (ச்ருவி) of lower Phrygia runs le' Ελλήσποντον (809). Some Thracians too live at the sides of the Propontis, others on the Eximorous ayaffors, the rest on the Ægean Sea. (323, &c.) The southern middle boundary of Europe is the Hellespont worter hi purculator Eλλήσποντος. Theocritus Id. xiii. says, the Argonauts came on the third day to the Hellespont, and anchored in a part of the Propontis.

his days. Like that of Iphigenia in Aulis, the invulnerability of Achilles, and many others, it seems to have been of much later invention. If this allegory had existed in his time, it would, however, by no means follow that the term Hellespont was particularly confined to the passage of the Dardanelles. The fable itself gives us small ground for any such particular association. That by Hellespont, Homer did not understand the canal of Abydos, seems easily proved. To omit the Homeric epithets πλατύς and ἀπείρων, which certainly establish the interpretation of each other, and which by all the ingenuity of Dr. Vincent cannot be made satisfactorily to express the properties of a streight, nor of Mr. Walpole, without a forced construction, be converted into salt, notwithstanding the authorities of Aristotle and Hesychius, Homer himself particularly distinguishes the inhabitants of the Hellespont from those of the supposed streight itself. In the catalogue, B. 845, among the Trojan anxiliaries are enumerated the Thracians δσσους Έλλησποντος αγάρρους έντὸς έξργει. In a former part of his list he has, however, separately classed together the inhabitants of Percote, Practium, Sestos, Abydos, and Arisbe. Had not Sestos and Abydos licen on opposite sides of the channel, it might have appeared that he only wished to distinguish the European and Asiatic sides. Under this distinction, however, it cannot easily be admitted that his Hellespont was the canal of Aby-By attempting to reconcile the supposed difficulties, we may, perchance, prove more than is intended, that the whole Propontis was by Homer designated as the Hellespont.

That the terms πόντος and Ἑλλήσποντος were on the whole used as synonyms, appears probable from many passages. At Y. 113. and A. 350. Achilles is said to be ἰδῶν ἐπὶ οἰνοπα πόντον, and at I. 360. he expressly says he shall on the following morning embark upon the fishy Hellespont and reach Phthia in three days. The epithet ἐχθνόεντα is not characteristic of the Hellespont. At I. 4. πόντον ἰχθνοεντα relates to the sea of Thrace. The Εὐρέα πόντον also describes (1. 72.) the sea winch was to be navigated from Thrace. From Arcadia the verage was over the Πόντος (Β₂,613.) and from Athos Juno (Ξ. 220.) passed over the Πόντον κυμαίνοντα. The Εὐρέα πόντον extends, it is true, as low as Sidon, Z. 290. M. 30. As, however, the Ægean sea was unknown to Homer, there is no ground for supposing that in his time

^{*} Pindar turnishes a confirmation of this opinion. At Pyth. iv. 284. we find the commands of Φριξθε, Δίρμα τι, πριοῦ βαθύμαλλον ἄγειν, τῷ ποτ' ἐκ Πειτον σκώθη." See a farther confirmation at Ψ. 214. 231.

the whole sea, extending at least between Hellas and the Troad, was not denominated the Hellespont.

The . Barrows of the Troad. It is in vain that Mr. Bryant and other writers attempt to maintain that the mounds of the Trojan plain were uncient Thracian or Scythian barrows, founded prior to the era of Troy, and long afterwards appropriated by the Greeks, while we have the express authority of Homer himself describing the foundation of some of these tombs,2 and his evidence for the previous existence of others, which he has, indeed, carefully assigned to their respective proprietors. The τύμβος ἄκριτος έν πεδίω or ές πεδίου Η. 336. 435.3 was constructed very early in the tenth year, for the whole number of dead who had fallen in the previous hattles. It was not fur distant from, $\pi \rho \sigma \tau i$, (337. 436.) the rampart, and does not occur again by name, or evident allusion.4 Is there any connexion between this barrow and the θρωσμώς πεδίσιο? Though the armies have fought near this ground, it is certain that we never hear mention made of the latter till after the construction of the former. I always believed in the identity of the two, and have since discovered that Prof. Heyne was of the same opinion.5 There are, however, many reasons why they cannot have been the same. The τύμβος άκριτος was close to the Grecian wall and towers. Now it is evident, that, though the Trojans were encamped at the Throsmos, (K. 160.) μεσηγὸ νεῶν, ή δε Ξάνθοιο ροάων (Θ. 560.) εγγύς νηῶν καὶ τείχεος (Ι. 232.) the θρωσμός was not close to the wall, because the Greeks went beyond the wall, (τειχεος έκτὸς) where the guards were stationed (1. 67. 87. K. 19. 41.) in order to hold their council; and in their night adventure Diomed and Ulysses had still a considerable distance to proceed before they

Bryant on Chev. 11

² Homer says those who died at Ilium had tombs raised to them, Od. xxiv. That of Achilles was on a tall Promontory, ib. and Il. vn. 98. At Il. z. 121, Achilles says κάτομαι έπι. κι θάνκ. From Od. Ω. 37. 40 &c. it appears as it Achilles had died on the plain with his troops around him, many of whom were a solum. There is not a word of the temple of Apollo Thymbraus. Pindar Pyth. m. 180. says he was killed by arrows, but does not mention Paris.

^{3 &}quot; Quid sit la πεδίου obscurius est. Vulgaris crat la πεδίω, &c. Tolerabile saltem est esse dictim pro lath; κατὰ τοῦ πεδίου non interius versus castra, sed extrorsum inde a Campo." Hoyne not, in 337. vii.

^{4 &}quot;Non satis definitum est quo sensu dictum sit προτί αθτίν, &c." Ελε. ι. in Lib. vii. Sec above.

See Trans. R. S. Edinb. iv. Dalzel's Illustr. of Chev.

encountered Dolon, who himself was beyond the reach of the Trojan outposts. The τύμβος ἄκριτος and θρωσμός cannot therefore have been the same.

The θρωσμοs, whatever was meant by the word, lay between the wall and the Scamander: separated from the ships, but so near that sounds from this place were heard at the wall. At O. 490, it is said to be Νύσφι νεών, ποταμώ έπὶ δινήεντι, ἐι καθαρώ, and at K. 161. έπὶ θρωσμῷ πεδίοιο, Είαται ἄγχι νεῶν, ολίγος δ' ἔτι χῶρος ἐρύκει. The remark of Bryant and Rennell that 50,000 men were encamped upon this spot, may be answered by a reference to the use of the preposition έπὶ in the former quotation.2 A second opinion of Prof. Heyne (Not. in II. Θ. 490.) is that the θρωσμώς was either a part of the plain more elevated (acclivior) than the rest, or is simply put for the plum. Rennell (53) considers it only as the ascent from the beach. It does not, however, appear possible that it can have been, as he expresees it, the first rising step, or ascent from, or eyen the son mit of the beach of the sea, as the rupples approxitself (according to the observations already made) was on the plant, and the Greenan rampart in near connexion with it. Now (as before remarked) the Trojans.

I How has Dr. Clarke contrived to displace his Throsmos so far from the situation assigned it by Homer? Its real Homeric site can never be questionable.

Most of our difficulties in precise translation arise from the great ignorance under which we still lie with regard to the real meaning of the Greek prepositions. In this single discussion alone we have seen the apparently triffing words ini, ix, mooth, map', rest and appli occasion uncertainty in the minds of the greatest classical scholars of the age. In consequence of this ignorance we know nothing of the site of the Callicolone. Barnes translates map' Simon præter Simoenta: others interpret it near or by Rennell. from Dr. Gillies' translation of this passage, makes the Callicologic one of the eminences between the rivers. My prejudice is in favor of its being on the opposite bank of the Simois, as, why scould Mais in his way from the Acropolis take the very circuitous mode of reading the Callicolone of Renuell, by following the remote course of its Smoots? His plan done would be sufficient to render the supposition impossible. Heyne says, "Collis ad Simoentem situs" (xx. 53.) " Anne quidem, quancum intellizatur, trajecto." (304.) There is no direct authority on the subject. It is singular that the Scholia, K. 160 and Y. S. give a very different account of the Thiosmos. In the former we find it was an elevated place in the plani before Troy, called by that name, as another similar place was called, Callicolone. At the latter passage it is said to be Callicolone itself, and the spot where Paris decided the difference between the three goddesses.

though near them, were certainly not encamped even in close communication with the Grecians. Dolon had some distance to pass before he met Diomed and Ulysses, who themselves had left behind them the Grecian outposts. In all this discussion it must not be forgotten that Dolon seems to have proceeded by a direct route from the tomb of Ilus, and that the line of Diomed and Ulysses was as direct from the centre of the Grecian camp. According to Rennell the τύμβος Erpiros was on the side of the station of Achilles, and attached to it was the right flank of the Grecian Rampart. (77) His argument for such a position is, that "had it stood on the left, it would probably have been mentioned during the attack on the left by Hector." This view contains, however, much assumption, and probably some erro-. Many circumstances, which we know to have existed, are constantly omitted in Homer's narratives, and it will be a point of the hardest proof to show that Hector's attack was, as is asserted, on the Grecian left.

Homer does not say that the Trojan army of 50,000 men was drawn out in battle array upon the αἰπεῖα κολώι η, σῆμα πολυσκάρθμων Μυρίννης (B. 811.), but ἔιθα, there, or mits immediate neighbourhood, an arrangement, the facilities for which had been established by the previous description, περίδρομος ἔνθα καὶ ἔνθα.

The Tomb of Ilus was between Troy and the ford of the Scamander, therefore on a different side of the river from the Throsmos. is remarkable that Whitaker-hould have fully admitted the correctness of Chevalier's position as to the identity of the Throsmos and tomb of Ilus. (Brit. Crit. ix. 600.) We know that the tomb of Ilus was in all probability as far from the Throsmos, as this was from the Grecian ships. At the tomb of Ilus Hector was removed from the noise of the army then encamped at the Throsmos, while even the tread of feet reached the Grecian walls from the latter position Rennell, indeed, thinks it no proof of its distance from the Throsmos. that Hector retired to it in order to avoid the noise and tumult of the camp, as this might have been done by "merely ascending the mound." (85.) Surely the tumult occasioned by 50,000 men and horses could not have been so easily excaped. I regret also the necessity of differing from the same author as to the force of another supposed proof of the contiguity of the tomb of llus to the wall, drawn from the circumstance that Paris wounds the Grecian chiefs with arrows, (A. 370, 582.) from the tomb of Iliis in the battle near the Rampart (85. 33. &c.) There is no evidence that the battle was near the Rampart. Agamemnon was close to the Trojan wall, when

he returned wounded. It is said that the Trojans would have pursued them to the ships (311) had not Diomed arrested the flight of the Grecians. After receiving his wound from Paris, he orders his charioteer to drive to the ships. By the ships it is almost certain that the camp in general is understood, and it may be safely concluded, that, when the order was given, Diomed was not already in the immediate neighbourhood of the Rampart. Common sense seems to indicate a distance from the Rampart which would destroy the force of Rennell's argument. It is not at all clear where the contest was carried on, but Paris may have been in ambush even in the rear of the Grecian chiefs.

Neither is there any evidence that "the tomb of Ilis stood in the quarter opposite to the station of Ajax, which is known to have been on the left, or on the eastern part of the camp, where Hector made his attack." These important premises cannot be granted.

Dr. Vincent's inequalified concession to Chevalier of his tomb of Hector cannot be reconciled with consistency, or his well known learning. He had hunself previously given up the supposed site of this thindles in the rear of the city, but, in his last writing, not only revokes that correct opinion, but justifies also an evident misinterpr to ion of the passages upon which our judgments must be founded. On perusing the description $(\Omega, 798, \&c.)$, it appears difficult to entertain a doubt as to the meaning of the poet, or to question whether the Tunnilus were in the front or rear of Troy, or his grave covered with large or small stones. The people collected before the city ($\pi \rho \delta$ $\ddot{\alpha} \sigma r \epsilon \sigma s$) and during nine days were engaged in bringing wood. On the tenth day they carried out the body (¿ξέφερω) and lumnt it on the Pyre. They collected the bones, and having placed them on a golden Λάρναζ, deposited them in a grave which they covered over with many large stones (not loosely) They expeditiously constructed a Tunculus (σημα), guards being ranged all round (περί πάντη) lest they should be attacked by the Achasans. Having constructed the tumulus they returned (πάλον κίσε) and feasted in the palace of Priam.

Patroclus had previously requested (Ψ 91,) that the same Σορός, χρύσεος ἀμφιφορεύς, might contain his hones and those of Achilles, and this latter (Ψ. 245, &c.) constructed a moderate-sized tunidus to be enlarged after his death, when it might also contain his own ashes. This tunidus, containing the united ashes, and those of Antilochus in a separate urn, was afterwards constructed (μέγαν καὶ ἀμύμονα τύμμον) by the sacred army of Argives.

'Ακτ ῆ ἐπὶ προύχούση, ἐπὶ πλατεῖ Ἑλλησπόντω.
''Ως κεν τηλεφανής ἐκ πουτόφιν ἀνδράσιν είη
Τοῖς, οἱ νῦν γεγάασι, καὶ οἱ μετόπισθεν ἔσονται. (Od. Ω. 82.)

The Flight of Hector. It is certainly true, as Chevalier, Dalzel, Bryant, Vincent, Heyne and others have determined, that independently of the equivocal interpretation of the two prepositions $\pi\epsilon\rho$ and $\delta\mu\phi$, there is nothing in Homer's description which can warrant the hypothesis of the chenlar flight of Hector round the city of Troy. In addition to the arguments employed by these and other authors, to prove, from the general context, that the scene of action lay between the walls and the fountains of the Scamander, it may be remarked, that, when under apprehension for the safety of Hector, Andromache expresses her fears lest he should be pursued by Achilles, she simply says X. 456. $\pi\epsilon\delta i\alpha \delta\epsilon \delta i\eta\tau a\epsilon$, without any allusion to a possible pursuit round the city. In order to satisfy herselt on this point, she likewise immediately directs her steps to the tower, and wall, where the crowd was stationed, to view the cambat. This stationary condition of the spectators is almost a sufficient evidence as to the meaning of Homer.

It appears that, in his flight, Hector had two objects in view: one to reach the gates; a second to bring Achilles within the scope of the darts from the towers. A circular flight close under the walls implies a contradiction to these intentions of the poet. If Hector had taken the lead in a circular flight, and Achilles (as is declared to have been the case) could not overtake him, why did not Hector reach the gates? It may be said, at least, that in traversing an oblique course of Hector, Achilles would place himself nearer the walls than his adversary, and thus have assisted one of his material objects.

It may be still further remarked, that although we do not necessanily conclude with Bryant and Dares Phrygius that Troy had seven gates, the Sewan gates were probably not the only gates of the city. These latter are particularised by Homer as leading into the plain. (Z. 392.) At B. 809 and Θ . 58. we learn that all the gates were opened. I am aware that, with a refinement and precision scarcely justifiable, Heyne devies the existence of any other than the Sewan gates on the ground that none other are mentioned by the poet, and for this reason seeks an explanation of $\pi \tilde{a} \sigma a a$ a synonym of "O\aa. As the reason is insufficient and the distinction unnecessary, we may still conclude that the passage of the Trojan and albed rolles was through more than one gate. Now if $\pi \tilde{a} \sigma a a$ allude to more than one gate, and Hector was pursued all round Troy, why was his only attempt at entrance made through the Dardanian gates? It matters little whether the Scæan and Dardanian gates were on were not the same, so long as the improbability remains that Homer should have precluded his Hero from the chance of escaping by more than one out of several means which offered themselves to his whoice.

The particular argument for the circular flight of Hector round the walls of Troy is derived from the assumed interpretation of the prepositions $\pi \epsilon \rho i$ and $\dot{u}\mu \rho i$. That the first of these, in its Homeric application with an accusative case, has generally a meaning different from that which is included in the idea of an entire orbit, or in other words does not mean circularly round the object which it governs, will not admit a doubt. It is not easy to describe a circle round a river, or round a long wall, as in τα περί καλα βέεθρα and πιρί τείχος. The anonymous author in the Edinburgh Review has, however, established the possible fact of an entire circuit, as the test of the real meaning of $\pi c\rho i$, and as, according to this writer, Troy was situated in the midst of a level plain, was itself not on a hill, and from its site would, therefore, readily permit such a passage, he determines that Hector was pursued entirely round $(\pi \epsilon \rho i)$ Troy. The argument is borrowed from Prof. Heyne, who, many years before, had said: "the expressions $\pi c \rho i$ and $\partial_{\mu} \phi i$ imply only something indeterminate in regard to the place, provided other circumstances do not more accurately mark it out." I come his own view of the topography of Troy, he assumed the converse of the position above stated. "As ancient Troy was accessible only on the side next the sea, and in the quarter of the Acropolis was surrounded by abrupt precipices, $\pi e
ho i$ in this place could not have meant circularly round." In answer to both arguments, I will observe, that the conclusion is entirely gratuitons, and that the possibility of a circular passage does not necessarily connect that meaning with the preposition $\pi\epsilon\rho i$. The first of the six examples of its use in the narrative of Hector's flight seems alone sufficient to invalidate the whole hypothesis, from which the abovementioned opposite conclusions are derived. There is no reason to suppose the goal or boundary described in the simile, X. 162. could not be entirely compassed, and yet περί τέρμα means only half surrounded. That the τέρμα in the chariot race had a passage round it is clear from the description (Y. 326.), as it was a dry pole with a

I See Schol. x. 6. It may be doubted whether ποτὶ ττολεος X. 198. generally translated prope, does not mean erga, an important difference; as πρετὶ ἄστυ, Σ. 266.

white stone on each side, and yet $\pi \epsilon \rho i \tau \epsilon \rho \mu a$ occurs also at 466. when we know that a circular passage was not made round it.

Dr. Vincent decides, that "one instance is as good as a thousand," and that because $\pi\epsilon\rho$ $\delta\eta\mu\alpha$, occurring in various places, (as Ω . 16. 51. 116. 755.) meant all round, this interpretation should, therefore, be adopted in all other places. It has never been denied that $\pi \epsilon \rho i$ has occasionally this meaning, but from what has already appeared it must be evident that no such unqualified conclusion can be warranted by any knowledge we are able to gain on this subject. From the general context of Homer we may further decide, that in his particular uses of the word, alone, or in composition, Homer never had in view an entire orbit or circle. At II. 448. Inpiter says they are fighting $\pi \epsilon \rho \lambda$ άστυ, when, if the poet's description may be trusted, we know they were not fighting round the city. In the passage B. 801, Iris (who had not like Jano occasion for equivocation,) says, the Grecians are about to fight $\pi \epsilon \rho i \ \tilde{u} \sigma \tau v$. As all the movements are accurately described, we may safely pronounce that, in this instance, $\pi \epsilon \rho i$ did not mean all round the city. The whole contest in both these cases was confined to the space between the ships and the Sewan gates. So likewise in the passages papraperse mept date, and offer fooder mept more $\lambda i
u$ (Z_{**} 256, and 327.) we are informed that the battle took place between the Simois and Xanthus, (Z. 1.) There is, however, one instance which may safely be considered as conclusive, against the orbicular interpretation of $\pi \epsilon \rho i$. It occurs Odyssey E. 473., and alludes to the ambuscade of which Ulysses formed one party. It will not be contended that in the use of περί άστν, it was meant that three persons encompassed the city of Troy.

In all the examples of its application in connexion with Hector's flight, and even in the watch appointed by him surfess we admit this peculiar case to be an exception) we may adopt a more indeterminate and less extensive meaning. It is evident that Homer limiself did not consider $\pi \epsilon \rho i$ as sufficiently emphatical to hear, in itself, the interpretation of circularly round. The $\pi \epsilon \rho i \delta \rho a \rho i \delta \nu \partial a$ kar $\delta \nu \partial a$ whatever may be the meaning of the passage, shows the insufficiency of $\pi \epsilon \rho i$: whether $\delta \nu \partial a$ kal $\delta \nu \partial a$ (B. 811.) are required to make the $\beta a \tau \delta \nu \partial a$ (B. 811.) are required to make the $\beta a \tau \delta \nu \partial a$ (in that these words annulated implied power of $\pi \epsilon \rho i$, by describing a passage open in certain parts only. The

[்] Pindar Olymp. viii. 78, 79, says: τὰ δὶ καί τοτ , ἐν αλκῷ τρὸ Δαζδάνου τειχεων 22,7 αυ, &c

περὶ πάντη (Ω. 799.) seems to convey a meaning not necessarily included in περὶ, a remark which more decidedly applies to the περὶ ἀμφὶ (P. 760. X. 165, &c. Ψ. 191.) It is not quite clear that πεμὶ with a dative does not more uniformly mean all round, than with an accusative. In περί σφισι (Σ. tiθ.) Πατρύκλφ, (P. 6. 137. 286. 355.) Χροὶ, (N. 25. 241. Ξ. 25.) δούρατι, (N. 77.) πόρτακι, (P. 4.) the notion is that of all round, and the same is true in numberless other places

But the frequent use of ἀμφι, of which the meaning is precise, confirms, it is maintained, the hypothetical interpretation of περι. That ἀμφὶ is at least as indeterminate in its meaning as περὶ needs little illustration. In the examples ἀμφὶ δὲ τ' ἄκρας (Δ. 425.) ἀμφὶ • ῆες (Η. 276.) πάντας (Ν. 120.) ἀχελώνον (Ω. 616.) ροῦς ποταμοῖο, (\ \ 731.) ρεεθρα (Η. 135.) κελεύθονς (Ν. 33°.) ἄλα (Λ. 409.) Σκάμανδρον (Η. 329.) τεῖχος (Η. 449.) &c. this circular relation is wholly madiansible. So also in ἀμφὶ ἀπτυ ἔρδομεν ἰρὰ θεοῖς (Λ. 700.) ἀμφὶ αὐτὰν Τρῶες ἔπονθ' (Λ. 473°) ἀμφὶς ἐνῦσα, (Η. 312.) this idea únist be wholly excluded. With these and many other authorities it may be permitted us to question the supposed meaning of ἀμφὶ πολιν Ι. 226. X. 381. Ω. 784. Φ. 442: and if at Ω. 789. Ψ. 256. ἀμφὶ πορὴν he said to describe an entire orbit, we readily admit such an occasional meaning, but derive nothing in proof of its signification in the cases more numediately under examination.

Neither do we feel authorised to adopt the supposed meaning from a consideration of its uses in composition. Hector speaking of the actions of the Trojans says: Ίλων ἀμφεμάχωντο (Ζ. 401.), which, even if it relate to the entire series of actions from the first arrival of the Grecians, supplies no definite evidence on the subject. Achilles in his account of these actions says he had destroyed twelve cities by sea, and eleven by land, κατά (not περί or άμφί) Τροίην ερίβωλου, (l. 328.) and in the Odyssey (A. 198.) he gives an account of his deeds &ri Tpoin eigein. We know from Homer's descriptions that in the tenth year no engagements took place round. Troy, and Achilles, though he has elsewhere used the expression "Ίλιον ἀμφιμάχωμαι, expressly declares his intention, even at the moment of his highest indignation, to do all possible mischief Ίλίου προπάροιθεν, not περί or άμφὶ "Ιλων, Φ. 104. When Hector is reproaching Paris for supincness, he -15: the battle ἄστν ἀμφιδέδης, (Z. 329.) on your account, though we know its locality was in front of Tray.

Two or three instances occur in Homer, which prove that in composition $a\mu\phi$ idid not describe an entire circle, and others may be tound which indicate its application to two sides of a circle. At 11

777. it is salt of the sun $\mu \acute{\epsilon}\sigma o \nu \ o \rlap{i}\rho a \nu \acute{o} \nu \ d \mu \phi \iota \beta e \beta \acute{u}\sigma \kappa \epsilon \iota$, a quarter of an entire circle. The same expression occurs Θ . 68. a line which Pope translates "Half the vault of Heaven." In $\dot{a}\mu\phi \iota \acute{\epsilon}\lambda\iota\sigma\sigma\alpha\iota$ (O. 549.) $\dot{a}\mu\phi o r\acute{\epsilon}\rho\omega\theta \epsilon \nu$, &c. only two sides are included. In $\dot{a}\mu\phi \iota$ as well as $\pi\epsilon\rho\iota$ a sort of reduplication is in general necessary to describe a complete circumvolution as in $\pi\acute{a}\nu\tau\eta$ & $\dot{a}\mu\phi\iota$. (N. 806. Ψ . 34. 110, &c.)

I may conclude by remarking that the idea of circularly round is (as in the instance of $\pi\epsilon\rho$) more frequently included in the connexion of $d\mu\phi$ i with a dative, than with an accusative case, as we may see in $d\mu\phi$ i $\pi \sigma \sigma \sigma$ i (N. 36.) $d\mu\phi$ i $a \partial \tau \tilde{\varphi}$ Π . 109. P. 359. $d\mu\phi$ i $Mevortiá\delta p$, P. 267. &c. &c. &c.

From the sum of these arguments, I conclude, that a circular flight round the city of Troy was never in Homer's contemplation.

OBSERVATIONS

ON THE JAMBIC METRE OF PHEDRUS.

PROPOSE in this paper to consider some of the most prominent features in the Metre of Phadrus. To judge from the authority and example of many scholars, his professed imitators, it seems that little more has been thought necessary to the construction of his lambic Metre, than to preserve a pure lambic always in the last place. But Phadrus, however easy, and even negligent to a certain extent, in his versification, has still set certain bounds to the liherties, which he has taken in this respect. Indeed throughout his Prolognes and Epilogues, he takes occasion to pride limited on the polish of his senarian lines,² and on the powerful influence of his numbers;³ and on this account, no less than on the merit of his invention, he builds his claim to the applause of

¹ Bryant has a very probable conjecture on the subject of κατ' ἀμαζ, τὸν as alluding to the place of that name in the Troad. It may be remarked that Pindar employs the same word under the interpretation commonly assigned to it in Homer: μακρά μοι νῶσθαι κατ' ἀμαξιτον. Pyth. iv. 439. See Var. Lectt. in Il. 11. 791. 5. Heyne.

² Hanc ego polivi versibus senariis. Prol. L. 1.

J Ut liber animus sentiat vim carminis. Prol. L. 3.

posterity, and anticipates with conscious satisfaction an immortality of fame. It may not therefore be smiss to examine somewhat innutely into the Metre of an author, who has confessedly paid so much attention to it.

In the first place I believe that Phædrus never allows himself to dispense with the observance of the middle cæsura. This with him is either penthemimeral, or hepthemimeral, at pleasure, so that every verse in Phædrus presents for its close after the cæsura, either three trochaics and a syllable, or two trochaics and a syllable, thus,

Quicunque turpi || fiande | semel m-|-notu-|-it. L 1. F. 10.

Quicunque turpi fraude | semel m-|-notu-|-it.

The following verses are the only ones, which I have observed as offending this rule.

The MSS, give the first line thus,

or

Primum, esse tibi ne vidi ar molestior.

and Brotier and others have so printed it in their editions, upon the supposition, that the final m in primum need not be elided But undoubtedly we ought to read, either with Bentley,

Primum esse vide. I ne tibi molestion of with Pithon

Primum tibi esse || ne videar molestior

The next line exhibits a variety of readings in different editions, as may be seen in Schwabe's Phaedins. I shall here content myself with observing that the MSS, of Pithou and Rhems give dem salutants invicem, and that of Perottus dende salutati invicem, and that the line therefore may be corrected in the following manner, upon the faith of these several Mannscripts,

Forte occucurrit [] dem salutati invicem

I have reserved for a separate consideration the case of what Porson calls in his preface to Hecuba, the Quasi-casura, that is, of a casura interrupted, or at least weakened, by an elision. Of this sort I have met with the examples following,

1.	Formoso se Pavonnni immisenit gregi Novissimė prolapsam effundit saremam	L. 1. F. 3. L. 3. F. 15.
3	Cum destinasson operis habere terminum	Prol. L. 4
	Tomplexus est quein Athemeuses spreverant Tpso ludgium ostenderet sese die	L. 5. F. 1. L. 5. F. 7.

I will consider them, each in their order. In the first line the MSS, read, Immiscuit se formoso payonum gregi: but the prose

versions of Romulus, Vincentius, and Anonymus Nilantii, all give miscuit se, and from these the line, therefore, may be thus corrected,

'Se miscuit pavonum || formoso gregi.

The second line requires nothing but the substitution of fundit for effundit.

The third line is thus printed in Schwabe's edition,

Cum destinassem || terminum operi statuere,

and this I prefer, as being close to the reading of the Manuscripts, which have terminum operis haberc. This last word in the MSS. has evidently been added by some person more solicitous about the sense, than the metre. I will here hazard a conjecture, which may throw some light on the four first lines of the Prologue to the fourth Book. It is observable, that the last word of the first line of the MSS, namely habere, is certainly spinious, and that the last word both of the third and fourth lines of this Prologue is entirely wanting in the Manuscript copies. It is probable, therefore, that, in some ancient copy, the parent of the few Manuscripts hitherto discovered, the corner of the first leaf of this book had been torn or damaged; and that thence has arisen the blank, which we now experience. This conjecture is confirmed by the circumstauce, that the second line, being shorter than the rest, has escaped inhurt, and is quite perfect in all the Manuscripts. If there be any truth in this conjecture, such emendations are entitled to the best reception, which least disturb the order of the words preserved in the Manuscripts, and merely supply a termination. For this reason as the fourth line in all the Manuscripts stands thus,

Nam si quis talis ctiam est tituli . . .

perfect in its rhythm as far as it goes, and wanting nothing but some word at the end, I should esteem the simple addition of some such word as diligens to the line, as preferable to the emendation of Bentley,

Nam sı quis talis etiam tituli est æmulus,

which, however good both for sense and metre, does a little innecessary violence to the order of the words in the Manuscripts, by the transposition of est.

To return to my subject, with respect to the fourth line it is a mere invention of Ursmus, and is therefore properly rejected by many editors.

The fifth line may be corrected by a mere transposition of words. Some persons might recommend the words to be thus read,

Ostenděrět îpso || sese ludorum die,

but I shall endeavour to show presently, that this would be only the substitution of one metrical error for another, and I would recommend to place the words thus,

Ipso die ludorum | sese ostenderet, or perhaps still better,

Ipso ludorum || sese ostenderet die.

Let no one wonder that the words in this line should have been altered from their original position to make ostenderct the middle word of the line, for among the Greek writers of the lower ages, and even among the more modern initators of Iambics, to have a dipodia of this sort in the middle, consisting of an entire word, is considered as the triumph of their art. Thus Faeruns, in his imitation of the 17th Fable of the third Book of Phædrus, expands the Pinus Cybebæ of the latter, or as he read it, Pinus Neptuno, into the following, in his opinion no doubt, most sonorous line,

Pinum humidi | tudentifer | Rector sali. Schwabe's Phæd. v. 2. p. vi.

The inquisitive may see a very short treatise De Versibus Comicis by Faernus himself, in which he commends the union of the two middle feet in one quadri-syllable. It is republished by Reizius, at the end of his Edition of the Rudens Planti, and well merits to be read. Hence it is, that the esse in tutetâ suâ of Phædrus is transposed into esse tutelâ in suâ. Indeed I have no doubt, that the whole design of Faernus in reconstructing this fable was to outshine Phædrus, and to improve his versification. With this view he constantly puts a pure lamb, or Tribrach, in the even places. As the Fable is not long, I will transcribe it here, and the reader, who will take the trouble to compare this with the genuine text of Phædrus, will instantly be convinced, how much of the spirit of the original has evaporated in the transfusion.

Legere proprias Dir sibi quondam arbores, Quam quisque vellet esse tutelà in sua, Quercum supremus Jupiter, Myrtina Venus, Pinnin humidi Tridentifer Rector sali, Apollo Laurum, Populum excelsa u Hercules Mirata enim vero est | Minerva, cin ita Infructuosas legere volussent, quibus Tantom ad manum esset fructue-num arborum. Cur Jupiter cansam hanc | roganti reddidit, Ne existimemur fructu honorem veudere. Tun Pallas: at vos facite, quod vobrs lubet, Ego, inq ut, oleam fructuum causa lego. Exosculatus filiam tum Jupiter, O Nata, dixit, jure sapicus omnibus Dicére saclis; jure tu capitis mei Propago; nam quod facimus, id nisi utile est, Stulta omnis atque manis inde est gloria.

How much pains have been here bestowed to produce a bad copy of an excellent original! The last line of Phædrus

Nisi utile est, quod facimus, stulta est gloria,

is indeed a golden one; but in the hands of Faernus, it is like gold under the beater's hand, which is rendered less valuable by every stroke that it receives, and becomes impoverished in proportion as it is expanded. I call this emphatically the last line, for who does not perceive, that to say any thing after it, is to spoil its effect? In particular the miserable line, which "like a wounded snake drags its slow length along,"

Nihil agere quod non prosit, Fabella admonet,

is not in Perottus, is not wanted, is a perfect excrescence.

A second Rule, which Phadrus seems to have observed is, whenever he resolves one long into two short quantities, to comprise the two short syllables together in one word, or part of a word, and not to let them be divided between two words, except in the case of monosyllables.

Thus for example, to take an instance that occurs in the 1st Prologue; in the verse,

Calumniarı si quis autem völüerit

the 5th foot is a dactyl, and the two short syllables representing the long syllable of an lamb, are regularly found in one word, or rather part of a word, together.

The only deviations from this rule, of which I am aware, are the following,

- Non rem expedire, sed mălă videre expetit.
 Qui paucas osteudit, ego plures dissero
 L. 1. F. 16.
 Prol L. 4.
- Qui paucas ostëndit, ëgo plures dissero
 Căpăt ita ad nostrum furoi illorum pertinet
 Asopiis ibi stans naris emuucta senex
 L. 1. F. 30.
 L. 3. F. 4.

With respect to the first line it is one of the most disputed in all Phadrus, as may be seen by a reference to Schwabe's edition. Burman and others cure the fault by reading

Non 10m expedire, sed malum dare expetit.

For my own part I believe the whole of this Promythium to be a later interpolation, and if not impertinent, at least innecessary. The Fable itself supplies excellently its own moral in these two words, Lupo sponsore. I suspect, that the first interpolation consisted only of one line, and that it was written thus in the Manuscript,

Fraudator hominė avocat sponsū unprobū

the final m being expressed only by a line, and avocat standing for advocat. Romulus (Schwabe's Phædr. v. 2. p. 622.) translates it into prose in this manner, Fraudatores, cum mutuantur, fidedictores

dant improbos. Not a word more is said by Romulus in relation to the second line. The first line, as above given, and unconnected with any other, is good sense, and according to the usage of the middle ages good metre, and I may say too, good metre even at this day in the opinion of those, who think that the final m in hominem need not be elided before advocat. In process of time cum was inserted between hominem and advocat, homine became nomen, sponsu became sponsu, avocat became avocat and vocat, and another line was added in the hope of throwing light upon the subject, but which in effect only made it darker. We are indebted to modern commentators and editors for the moffensive form which these lines are now made to assume in the text of Schwabe's Phædrus.

With respect to the second line, Bentley gives correctly as to metre,

Quia paucas ille ostendit ego plures tero,

but in this, as in the former example, there is the greatest disagreement, both among Manuscripts and Editions. It appears to me on this account extremely suspicious, and still more so on its own account, as being a useless incumbrance to the sentence, and little more than an amplification of the line that follows,

Usus vetusto genere, sed rebus novis.

With respect to the 3rd example, Bentley has properly restored it to just metre by reading

Ită căput ad nostrum furor illorem pertinet.

In the same manner, in the following verse

'Alu önerant saxis, quidam contra miseriti L. 3. F. 2.

the first foot is a proceleusmaticus, for to consider ahi here as a dissyllable, which some critics recommend, appears a forced measure, and is introducing at least an unnecessary because.

I now come to the last example, and here too neither MSS, nor printed copies agree. The MS, of Perutus exhibits this line and the succeeding one, in the form of mere syllabic lambics, agreeable to the corrupt practice of the middle ages, without any regard either to casura, or to quantity,

Æsopus ihi stans || nairaie incipit Naturam nequaquem || verba cuiquam dare.

It may be corrected either by reading with Bentley, Æsopus ibi tum n. e. s., or with Hemsius, Æsopus astans n. e. s.

I have said, that Monosyilables are exempt from this rule, as

Ante hos sex menses, male, at, dixisti nulu.

L. 1. F. 1.
Calumniator ab ove cum peteret canis,

L. 1. F. 1.

In these instances the short intervening monosyllable is to coalesce with the succeeding word so as to make in the first instance a dac-

tyl, and in the second an lamb resolved into a Tribrach. Whether the short intervening monosyllable may coalesce with the preceding word, so as to make an Anapest, may admit of some doubt, as examples of this sort are very rare, while examples of the other sort are common enough. I know only one instance,

Titvio conceptus et educatus stercore,

L. 1. F. 27.

and here Bentley omits the et. In another instance the monosyllable is not an intervening syllable, but the first syllable of an Anapest, as

Noc opinans et smistram fregit tibiam

L. 5. F. 7.

The first words of this line however, it must be remembered, do not rest on the authority of any Manuscript, being merely conjectural.

Euripides in his Cyclops affords two instances of a monosyllable prefixed to an Iaiab, and thus making an Anapest, namely,

Συνεκθανείν δε σιγώντα χρή τῷ πώματι

568.

Μέμφη τον εραστήν, καν τρυφαίς πεπωκότα

584.

Many editions, instead of $\sigma_1 \gamma \tilde{\omega} v \tau \alpha$ read $\sigma_2 \tilde{\omega} v \tau \alpha$, and in the second line Heath proposes to read $\mu \epsilon \mu \phi_1 \gamma'$ egastive, numecessarily, as the article here may be considered as uniting itself to the substantive, and as forming together with it but one word.

The reason for this second rule of Phædrus seems, I think, obvious enough—for when a Tribrach is put for an lamb, it still ought to be considered as an lamb, and not to enter the verse in the character, or in the resemblance even of a Trochee. Thus in the line above mentioned

Non 1em expedire, sed målå videre expetit

the division of the Tribrach here favours more strongly the Rhythm of a Trochaic, than an lambic foot. In the following line

Æsopus ibi stans naris emunctæ senex,

after the short syllable in Æsopus, one long syllable, re-wo short syllables, are all that is wanting to complete the foot; but if instead of what is required a word follows, which is of itself an entire lamb, it is evident that the final syllable of Æsopus becomes then a superfluous and redundant quantity. Again in the verse

Qui pauces ostendit, ego plures dissero,

at the end of the word ostendit the ear perceives a perfect Trochee. These different effects are not produced, when the trisyllabic feet, instead of being inartificially broken between two words, are contained in the body of an entire word, as

Audierat esse quod rēmēdium vulneris
Clitellas impositūrum victorem piitas
L. 2. F. 3.
L. 1. F. 15.
Tούς τ' ἄρνας ἐξεφοροῦντο. δήσαντες δέ σε
Calvus coinosa fronte, nudo occipito
L. 5. F. 8.

The same effects may likewise be avoided by an artificial division of the trisyllabic feet between two words, so as to keep and tie together in one word the two short syllables into which the long has been resolved, as

Respondit illë: Făcëres si causâ meâ I. 1. F. 22. Qui postquâm cæde fessus est, ăsînum evocat Ib. F. 11. Noli imputare vanûm beneficium mibi Ib. F. 22.

It will be found, that Euripides in his Satyric Iambics has conformed his versification to this rule, and in the line therefore

Πῦρ καὶ πατρῶον τόνδε λεβητά γ' δς ζέσας, Cyclops, 343. recognised by Gaisford in his excellent edition of Hephæstion, p. 242, and confirmed by the MSS., I think nevertheless, that τὸν, instead of τόνδε as proposed by Barnes, and adopted by Hoepfner, is the more correct reading.

A third rule which Phædrus has observed is, not only to keep the resolved syllables together in one word, but to place them always at the beginning of a word, as

Ne gloriari libeat ălienis bonis
Omne insuëtis onus et cœpissent queri
Non quia crudelis ille, sed quoniam grave
Ib. F. 2.
Ib.

The only deviation from this rule, which occurs in Phædrus, as far as I have observed, is in the line following

E populo sic nescio quis, ut fieri solet I.. 3. F. 9. But nescio quis here is no more than aliquis, and like quilibet may be considered as one word. The same word occurs again indeed

Ita ut putavit is esse nescio quid boni L. 2. F. 5. but to my mind this line is undoubtedly an interpolation, and a mere explanation of the preceding line,

Agnoscit hominem Cæsar, remque intelligit,

that is, "Cesar takes notice of the man, and comprehends his object; namely, that he (the man) thought to get something for his trouble." The line, when properly understood, is immecessary; but Commentators have made it worse by their misinterpretation. Schwabe, to favour his interpretation of it, reads

Id ut putavit esse nesció quid boni;

Whoever strikes it out of the text entirely will purge Phadrus of so much dross. We may now decide, that the line

Quasi paucas ostenderit, ego plures dissero, Schw v 2. p. 433. proposed, as an emendation, by Brotier, is wholly inadmissible. • On the same account this line, which appears in some books,

NO. XXXI Cl. Jl. VOL XVI. • F

has as little pretensions to authenticity. The line mentioned in the preceding part of this essay,

· Ostendërët īpso sese ludorum die,

is liable to a similar objection. When the two short syllables are not strictly final, but become so only by the means of elision, they do not fall within the operation of this rule, as

Auxilia dum requirit exítium invenit	L. 9. F. 31.
Alvos accipite et certs opus infundite	L. 3. F. 13.
Qui sæpe laqueos et muscipula effugerat	L. 4. F. 2.
Suis ligarant, ut conspicuum in prœlio,	L. 4. F. 6.
Exigua cum frenaret m teria impetum	L. 4. F. 26.

In these, and other instances that might be advanced, the two short syllables seem to be considered as being in the middle of the word, notwithstanding the clision of the final syllable.

The reason of this rule is not, to me at least, so obvious as that of the preceding. Why is it, that Phædrus continually concludes his lambic with words like pětřeřint, but never concludes a verse in this manner, commodă fides? Why is it that Phædrus never begins a verse in this manner, Nunc auspiciă sunt, while he frequently introduces a tribrach in the same place after another form, as Cogitque miseras? It may be observed that the cæsura is the soul of lambic verse, as it is also of the heroic, and that in the condemned forms abovementioned the cæsura is not only destroyed, but the foot is made to terminate on two short syllables instead of one long, and thus by this licence the ear perceives still more forcibly the absence of the cæsura. Nothing is more common, even among the Tragedians, than to place a spondee without cæsura in the 5th place, as

Πατήρ, ίν', εἴ ποτ' Ἰλίου τείχη πέσοι, Hecuba, v. 11.

but read here $\tau i i \chi i \tilde{\alpha}$ instead of $\tau i i \chi \tilde{\eta}$, and, though the rhythm or numerical quantity is precisely the same, the metre is destroyed. But whatever may be the reason of this rule, Phædats seems to have observed it more religiously than Euripides in his Satyric lambics. There are several verses in the Cyclops, where a tribrach enters, as an entire word, without any cæsura, as

```
΄Ανἔχε. πὰςεχε. τί τάδε; τίς ἡ ραθυμία; v. 209. 
΄Ως τ' εἰς ἄκρους γε τοὺς ὄνῦχᾶς ἀφίκετο, v. 158. 
Χώρει δ' ἐς οἶκους πςίν τι τὸν πἄτεςἄ παθεῖν, v. 297.
```

I believe there is no instance in the Cyclops of a similar tribrach in the third place, and there no doubt the absence of the regular cæsura would be much aggravated by such an additional licence. But the Commentators and Editors of Phædrus have not scrupled, as has been before mentioned, to make him the father of such a monster in ascribing to him this line,

F. 25.

Cum destinassem operis habere terminum.

Herman has produced an instance of a dactyl in the third place, unconnected by any cæsura, in the line following,

Κιθάρα, τρίποδες, αρμάτα, τράπεζαι χάλκεαι. Elementa Doctrinæ Metricæ, p. 139. Ed. 1816.

On the subject of this rule, in relation to the fifth place, there are some very judicious observations of Seidler, annexed to his trea-

tise on Dochmiacs, p. 380.

The deviations from the three preceding rules in Burman's Appendix, republished in Schwabe's Edition of Phædrus, are very frequent; and it may serve perhaps the purpose of further illustration to set down a few examples of these deviations under distinct heads.

Offences against the first rule.

• Quo mures diffugiunt strepitu p Et frustra largiter jactari a fam Jejunis projici jubetur bestiis Et gaudens de alieno saturavit Immicum si tradidero hodie gr Fortunam mutari suam blandè	ilia F. 10 F. 15 æmulum F. 20 egis tui, F. 20
Offcuces against the seco	nd rule.
Decepta vulpis quid optis érat lo Meo ne tegminé videaris pulchris Properasti tale ne mihi vémret m Cin Miluus égo ut pervenirem ne Et a pastore visus qua parté fûge Te imposito, me gravari sentiré p	or F 22. iali F 11. iptias F. 34. iret F. 23. ootni F. 31.
Offences against the third	rule.
Cæpit securi magna excidere rob Me teneo quin te salvis calcibüs At illa quamvis excideret animus Et protfinus auxilium petens ani Fugiente devor, t anserem ca or Hæche est polliciti aquila dixit	exteram F 17. tamen F. 19. ser simul F. 20.

The last, and the last line but two, have no middle cæsura, and the last line but one is embellished with a very awkward one, if indeed it deserve the name. But the prince of verses both for a false cæsura, and for a false division of the vice-iambic tribrach, is the following,

Enectos a leonibus i homines ait

Although Euripides has many verses, that make a tribrach of an entire word, without any cæsura, as we have seen above, yet, I believe, he affords no instance of a cæsura falling upon two short

syllables, instead of one long syllable, as in the line last cited, and

in the several preceding lines, marked with an asterisk.

We may perceive from the errors of Burman and others, how necessary it is to ascertain the laws of metre adopted by an author, before we attempt to make any conjectural emendations, or even to make a choice among different readings in Manuscripts. Until this preliminary point be fixed, criticism has no certain object, and all endeavours at correction of the text are little better than shooting arrows into the air. Nor is the pleasure arising from an accurate knowledge of metre inferior to its utility; for whoever has a thorough insight into this matter, may be considered as having a key to the secret mechanism of the Composer, and is precisely in that condition, in which Phædrus, in common with every other poet, wishes his readers to be,

Ut liber animus sentiat vim carninis.

I will now apply the preceding rules, as a sort of touchstone, to the New Fables of Phædrus, said to be discovered in the Codex Perottinus, and published at Naples 1811, first by Cassittus, and afterwards by Cataldus Jannelius. I must first premise, that I have never seen the Neapolitan Editions, and that all my knowledge of the New Fables is derived from a neat and useful edition of Phædrus, published at Paris 1812.

To begin with the matter of Casura, I find only one defective line in this respect.

Paulò post armillam | tollit is argenteam

F. 17

This defect might be removed by reading

Armilam paulo post töllít is argenteam

but still there remains an objection to the division of the two short syllables in the dactyl töllít is, as is is here not an intervening monosyllable, but a final one, and is totally different therefore from the following division of the two short syllables, which is very common in Phadrus, and where the monosyllable does not conclude the foot, but is involved in the middle of it,

Tum circumeunts fuerat quod iter longius.

F 19.

Whoever may be its author, the whole of this seventeenth Fable is contemptible stuff, and beneath criticism.

The following examples occur of a wrong division of the two short syllables, put for one long syllable,

Hac qui negavit, magno consilio, homini F. S. Respondit contra: tu bene quidem pradicas F. S. Licet horreum mihi pateat ego scalpam tamen F. 11.

The first line might be restored to metre in this manner,

Hæc qui negavit hommi, consilio gravi.

The second line might be cured by reading equidem for quidem, but in truth this Fable is a fit companion for the 17th. The last line of it,

Quin sequeris prædam? Etiam tibi | committo meam,

exhibits an hepthemimeral casura after two short syllables, such as is inadmissible, and without example in Phadrus. The third and last line I would amend by transposition, thus

Licet mî pateat horreum, scalpam ego tamen.

An intervening monosyllable occurs in an anapæstic foot in the following line,

Effusa trepidos pulsăt, et omnes dissipat

F. 16.

The introduction of the monosyllable in this case, as the metre is complete without it, has a cloying and disagreeable effect; but whether it may be retained, or ought to be rejected, in imitation of Bentley's correction of the line already mentioned,

Trivio conceptus, educatus stercore,

I shall leave others to determine.

The following examples occur of a wrong combination of short syllables:

1. Novem porrectus Tityus est per jugera,	F. 7.
2. Voces resolvit acta Pythia numine,	Γ e .
3. Quos ultra paulo villa splendida Divitis	Ŧ. 16.
4. Lacrymis obortis, vivue felices, ait,	F. 21.
5. Multi infideles pectore, verbis benevoli	F. 27.

The first line may be corrected by the omission of est, and by the conversion of suggerens in the next line of the context to suggerit,

The second line needs only transposition, and we may read

Voces resolvit Pythia acta numine.

In the third line read

Quos splendida ultra paulò villa divitis.

In the fourth line I would omit ait, and read

Lacrymis obortis, vos felices vivite; •

ait, inquit, etc. are frequently omitted by Phædrus, and have been frequently inserted by the copyists.

In the last verse the antithesis between pectore and verbis seems puerile, for what other infidelity can there be but that of the breast? I should prefer a more simple enunciation of the moral in this manner.

Multi infideles sunt verbis benevoli.

I will now notice some false quantities, that exist in the edition which I have of the New Fables. An ingenious and learned writer, in a former Number of the Classical Journal, has very justly questioned the quantity of repulit in the following verse,

Jucunditatis causam non repulit Venus.

F. 11.

Repulit, I believe, in the most approved authors, and certainly retulit, retudit, and reperit in the perfect tense, in Phædrus are found with the first syllable long.—The reason of this perhaps is, that the first syllable is a contraction of two short syllables, that is to say, that repulit is quasi repepulit, in the same manner as momentum is quasi movimentum, suspicio quasi suspicitio, humanus quasi hominanus, and hybernus quasi liyemernus. I believe, that in all other words, and in the words abovementioned in all tenses but the perfect, and those derived from the perfect, the first syllable is made short by Phædrus, except in the single instance,

Delusa ne spes ad querelam recidat.

L. 3. F. 13.

But it is observable, that the sense of this line is not in Romulus, and that the whole Epimythium may well be spared as an idle repetition and expansion of the last line of the Fable,

Omnesque propriis sunt contentæ dotibus.

In the line,

Ut quisquis esset par officium reciperet,

F. 23.

par is made long, but if we transpose the words into officium par, all is right.

In these two lines,

Male cessit, ait, artis quia sum nescus Hæc quotidiana capta consuetudine.

F. 14. F. 15.

the last syllable in quia must be long, and the second syllable in quotidiana short; but if in the first line we substitute inquit for ait, and in the last we omit hac, the metre will be rendered perfect; the second line may even remain as it is, if we consider quotidiana as a quadrisyllable. In Fable thirty-two the final syllable in rogo is made short, with what propriety let those determine who think this Fable genume.

Having noticed some defects in the metre of the New Fables, I will now mention some things, which to their credit I do not find in them, and the absence of which from the New Fables, if the authenticity of these can be established, may go some way to prove that they ought not to be found in the Old Fables.

In the former there is no example of m final not elided, of the termination of the passive infinitive in *iet*, or of the penultima of the perfect in *erunt* made short. In the Old Fables two instances are met with of the passive infinitive in *iet*.

Et incipiebat Princeps ingredier, eum. Mirati sibi legatos non revertier.

L. 5. F. 7. L. 4. F. 17.

The former however is printed in some books, on the faith, I believe, of Manuscripts, in this manner,

Et incipiebat ingredi princeps, enni.

It may be observed too, that ingredier terminating in two short syllables offends against the third rule above-mentioned. There remains therefore but a solitary instance, and this occurs in a Fable so destitute both of wit and decency, that every lover of Phadrus must be disposed to distrust its authenticity. I am happy to think, that this extraordinary form of the infinitive does not furnish the only ground for the rejection of this Fable, but that it contains also another solitary instance, equally suspicious, of the final syllable made short in the first person of the present tense of the first conjugation, namely,

Non věto dimitti, verum cruciari fame.

In the Old Fables the following instances occur of the e made short in erunt, the third person plural of the perfect tense.

- 1. Illis revertor hostis qui me lesciunt. 1. 3 F. 2.
- 2. Hirci mœrentes indignari cœpërunt. I. 4. F. 15.
- 3. Felique et catulis largam præbuërûnt dapeiu. L. 2 l'. 4. 4. Abiturus illuc quo priores abierûnt. L. 4. F. 19.

In the two former instances the MSS. and several editions give læserant, and cæperant. In the third line, the MSS. have

Felisque catuhs largam præbucrunt dapem,

but, I think, whoever reads the Fable, will agree with me, that this line is altogether an interpolation, inscried merely to complete, as was supposed, the catastrophe. The fourth line is, to my mind, still more clearly an interpolation. It stands at the head of eleven lines, containing an apostrophe to a miser, and by no means destitute of vigor, either in conception, or expression; but they have nothing of the manner of Phædrus; they are by far too much laboured for him, every line containing an antithetical sentence, and exhibiting a perfect rhetorical climax.

I will just add, before I conclude, that in the New Fables an anapæst after a dactyl occurs once,

Quum venatorem celeri pede fugeret lepus.

F. 28.

but this fault may be cured by transposition, thus
Quum fugeret venatorem celeri pede lepus;

Phædrus has admitted twice or thrice apparently an anapæst after a dactyl, but it is in appearance only, and in the case of the word beneficium, which ought to be considered as a quadrisyllable, in the same way as he makes inedia a trissyllable in the following verse,

Quid multa? Inediá sunt consumti cum suis. L. 2. F. 4. and as consilium and principium in the Odes of Horace, and as ariete in heroic verse are all used as trissyllables.

To the question, whether I believe the newly discovered Fables to be genume, my answer is, that, to judge from internal evidence alone, their authenticity rests upon as good a foundation, as that of the Old Fables. They have both, no doubt, been mutilated and disfigured in their passage to us, sometimes from the negligence of transcribers, who were so inattentive to metre as to make their copies without any distinction of the text into verses, and more often from the vanity of the learned, who have decked the simplicity of the original with their own tinsel. I believe, likewise, that some entire Fables are spurious, and it is to the interest of Phædrus that they should be thought so.

Paris, June 1, 1817.

J. M.

ΠΕΡΙ ΤΟΥ ΦΟΙΝΙΚΟΣ.

Part III.—[Continued from No. XXIX. p. 14.]

I SHALL perhaps be accused of having been too rash, in speaking of Al Choder and of Aphridun, as of imaginary persons, one of whom was symbolized by the palm-tree, and the other by the Phœnix. Al Choder, or Kheder, and Aphridun, or Phridun, or Feridun, it may be said, were both real historical personages. The first was a General in the army of Iskender Dhoul-Carnain; and the second was a King of Persia, the sixth of the Pischdadian dynasty.

This account sounds very well; but it does not quite accord with some others, which are nevertheless made to accompany it by various Oriental writers. What are we really to believe of Choder, or Kheder, who, according to the Tarikh Montekhed, was

the nephew of Abraham, while Beidavi asserts that he flourished in the time of Aphridun, or Feridun, whom Ben Shohnah holds to be the same with Dhoul-Carnain, who is said in the Tarikh Montekhed to have been Alexander the Great? Beidavi, as he is cited by Hottinger, affirms in defiance of history, chronology, and common sense, that Alchoder, who was Elijah, existed in the time of Moses. If we turn to D'Herbelot, we shall find, that the Orientalists held Al Choder, or Kheder, to have been immortal, because he had drunk of the water, and had eaten of the fruit of the tree of life. Mr. Richardson, no doubt from Oriental authorities, tells us that Kheder, or Khizr, as he more properly writes the name, was a Prophet, and a Vizir, or General, of an ancient Persian King, called Alexander Caicobad, not Alexander of Macedon. Indeed D'Herbelot has remarked that there were two Iskenders, each of whom had the surname of Dhoul-Carnain. is it not rather singular that the first of these, an ancient Persian King, the first of the Caianian Dynasty, should have borne a Greek name? Then how came he to be called Dhoul-Carnain, i. c. Bicornis? That Alexander the Great should have received this appellation, will not appear extraordinary to those, who have seen the medals which represent the pretended son of Ammon, or who remember the story recorded by Aulus Gellius. But what could Caicobad have to do with such a name? Some Oriental writers say that he was so called, because he had conquered both the East and the West. The reason is not very satisfactory. But the most surprising part of the history is yet to come. D'Herbelot tells us that Dhoul-Carhain was no other than Choder, or Kheder; while Mr. Richardson informs us, that the Orientalists confound this same Kheder with St. George of England.

Let us begin the history of Aphridun, or Phridun, or Feridun, by stating from the Shah Nameh of Ferdousi, that this celebrated King of Persia was nursed by a cow. He was elevated to the throne by the military skill and unparalleled valor of a black-smith, whose apron afterwards became the banner of the Persian Monarchs. Feridun is said to have been a very wise and valiant Prince, who performed many wonderful exploits, and who upon one occasion changed himself into a dragon to frighten his children. According to the Rooret El Sefa of Mirkhond, this Prince

conquered the whole world, and divided it among his three sons. His reign is stated to have lasted 500 years. To this authentic history, I shall only add, that the author of the Terach Cozidez affirms that Feridan was an excellent Mussulman.

I shall now, I trust, be permitted to call Al Choder and Aphridun imaginary persons. It remains to be enquired, why I have traced their names to the Arabic rather than to the Persian. The fables, that identify Al Choder and Aphridun with Henoch, and Elijah, seem to be all of Arabian manufacture; and the Arabians, like the Greeks, were ever desirous of tracing foreign names to their own language. According to D'Herbelot, the Orientalists gave his name to Choder, or Kheder, or Khizr, " à cause qu'il jouit d'une vie florissante et immortelle." My knowledge of Per-خف sian is too limited to allow me to pronounce positively that Khizr is not an original word in that language, signifying green, flourishing; but there can be no doubt that there is such a word with such a meaning in Arabic, and that Khizir signifies palma virescens. If Phridun, or Feridun, be originally Persian, this name niay be فر بران gloria, vel decus potestatis. But still this does not correspond with the tales, which make Aphridun, the same with Al Choder, and with Henoch and Elijah. Undoubtedly the Arabic Khizir, viridis, or palma virescens, and Phridun, ille qui singularis et unicus fuit, ut etiam phanix saculi sui, were names better adapted to that immortal being, who, according to the Jews and Arabians, has appeared at different periods under the names of Henoch, Phinehas, and Elijah, than any other appellation, which, as far as I know, can be obtained from any similar combination of letters in the Persian language.

I shall now proceed to consider the traces, which may yet be found in the East of the fable of the Phœnix.

There are three names under which the Chinese appear to recognise the ideal existence of this celebrated bird. The first is the Yatana, which is said to live for a thousand years. The second is named the Louan, and is described as the most beautiful of birds. The name indeed is said to express "that which shines with every colour;" and the song of the Louan is said to be more melodious than that of the nightingale. It will be remembered, that the voice of the Phænix has been extolled in the verses of

Claudian and Lactautius. The third is called Foung, or Founghoang; and is represented as the king of the birds, by which he is surrounded in great numbers, (innumera comitantur aves) as often as he makes his appearance. The Chinese confess, however, that this bird has been rather a stranger among them, and has only shown himself during the reigns of their most virtuous Emperors. There is yet one remark which I have to make, and which may merit the consideration of the antiquary. The Chinese make graphic representations of the Foung, as the Egyptians appear to have done of the Phænix.

Every reader of the Arabian Nights' Entertainments has heard of the celebrated bird, which the inhabitants of Yemen call the roch, or roc. (;) But this bird, which lays an egg larger than a hogshead, and makes nothing of breakfasting on a rhinoceros, bears no resemblance to the Phænix. I suspect indeed, that the Arabic; is derived from the Hebrew DID; which, Bochart says, was the white vulture; the roch of the Arabian fabulists may then be only an excessively exaggerated description of a real bird of prey.

The Arabian writers, however, speak of another imaginary bird. which they call like, anka, and which may be thought to bear some resemblance to the Phænix. R. Aben Ezra observes that in the language of Ismael, as he calls the Arabic, anka is the name of a thing, which is not to be found in the world, nec furt unquam creata, sed tantum usurpatur in parabolis, ut fatentur periti sermonis eorum. The anka is generally considered by Oriental writers as the same with the Rersian with the Rersian, and I shall therefore defer the comparison of the former with the Phænix, until I come to speak of the latter. I shall, however, offer a few remarks on the word anka.

In a former part of this dissertation I endeavoured to show, that among the names from which point was derived, we might reckon PW Anak, probably called by the Egyptians, according to the usage of their language, Phanak. But the original signification of Anak in Hebrew, and probably in Arabic, is encircling and I have no doubt that Anak, though it might be the name of a man, was also a solar title. It is to be observed, that in the ancient languages, a regal title was also generally a solar one; and accordingly the Greeks have occasionally honoured even the mean-

est of the solar symbols with the dignified appellation of dvat. I even think it not unlikely, that they borrowed this regal title from the Phænicians, the Beni-Anak. That the sun was called Phanax, is unquestionable; and it appears to me, that this is nothing else than anak, or anax, prefixed by the Egyptian article ph. But if the Arabians gave the name of anak to a solar symbol, they would retain it pretty nearly in the same form in which it existed in the Phænician, a dialect originally not very dissimilar to their own. Most certainly it seems inconceivable, that they should have given the name of anka or anaka, to their fabulous bird, if they only considered the meaning of the word, as it is now understood in their language. Lie signifies "a neck." But if the anka be the same with the Phænix, as some writers think, and consequently a symbol of the Sun, it may have derived its name from anak, (אַנגק) taken as a solar title, from the Sun's apparently making the circuit of the heavens.

. I have already stated that the Jews were not unacquainted with the fable of the Phonix, and that they named this imaginary bird chol and aur-shinah. But the Rabbins, in adding much to this fable, have not embellished it. According to their statements, the period of the Phœnix is a thousand years. Their accounts, however, do not seem to indicate, that they understood the allegory contained in the Egyptian story of this bird. It may indeed be remarked, that the Rabbinical writers often invented the most absurd fictions, without any view whatever to the instruction of their read-The fables which they imagined seem to have been dictated merely by their love of the marvellous; and it would be vain to look in their writings for the elegant allegories, or the moral truths, which we find so often interwoven with the ingenious fictions of the Greeks and the Egyptians. I know not whether their story about the bird, which they call Bar-juchne, be founded on that of the Phœnix; but there is certainly no Arabian tale more irrational than this, in which the Jew must either believe, or reject the anthority of the Talmud, where it is gravely stated, that one of the eggs of this enormous bird having fallen out of its nest, a forest of cedars was crushed beneath the mass, and sixty villages were swept away by the inundation caused by the breaking of the shell. The Bar-Juchne, (say the Rabbins,) shall be roasted and

served up, with the Leviathan and the Beliemoth, at the banquet which shall be given to the children of Israel, when Messiah Ben-David shall come to reign over the world!

That there exists a striking resemblance between some of the Egyptian and Indian symbols, seems to be generally admitted; and as the figures of Ammou, and the Sphinx, are easily to be traced among the monuments of Hindostan, I thought it not unlikely. that the fable of the Phænix might have found a place in the books of the Bramins. In this expectation however I have been disappointed. It is possible indeed, that the fable of the Garuda was founded on that of the Phænix. This can be only ascertained by an appeal to the Puranas, in which an account of the Garuda is given. According to Sir W. Jones the Garuda is "a rational eagle," and has " the face of a beautiful youth." From Mr. Wilford we learn, that the Garuda daily devoured a serpent, until the King of the serpents retired with all his subjects to Sancha-dwip, where he sought and obtained the protection of Swami-Carticeya, the God of arms. There is nothing in either of these stories to remind us of the Phænix; but Mr. Paterson (Asiatic Res. Vol. 8.) recals the Egyptian bird to our recollection, by telling us, that the Garuda " is perfect light, the dazzling full blaze of day, the type of truth, the celestial vahan of Vishnou." The Indian bird, therefore, is clearly a solar symbol; and under this point of view may be compared with the Phænix; though it may be thought to bear a yet stronger resemblance to the eagle of Jupiter, as it is represented soaring with Ganymede to heaven. In fact I cannot help suspecting, from the account given by Sir W. Jones, that the Indians framed their story of the Garuda, after having seen the rape of the son of Dardanus pourtrayed by the pencil or the chissel of some Grecian artist. Still it is to be remembered, that the eagle of Jupiter, like the Egyptian Phænix, was a symbol of the Sun, and that Jupiter, otherwise called Diespiter, was himself a type of that luminary, originally adored by the Tsabcans as the emblem of the Deity. All the errors and all the fables of the Pagans, from India to Iceland, may be traced to heliolatry; and whether we speak of Vishnou, of Jupiter, or of Odin, we shall find that the system of Macrobius solves the enigma of nearly the whole of the Heathen mythology.

It will not appear extraordinary, that more distinct traces of the fable of the Phænix should remain in Persia, than in any other country of the East, when it is considered, that Egypt continued to be a province of the Persian empire from the time of Cambyses to that of Alexander of Macedon. I shall briefly state what I have collected in the course of my reading upon this subject.

The Persian fabulists speak of an imaginary bird, which they call kuknos. It is evident that this is nothing else than the Greek word xúxvos, cygnus, written in Persian characters; but the fable related of this bird shows, that the Persians confounded the fictions invented for the swan, with those imagined for the Phænix. The kuknos is said to live for a thousand years; to sound the most harmonious notes, through a bill which contains no less than tifty orifices; to form a functal pile for itself; and, as it expires amidst the flames, to give birth to its successor.

The Persians mention another bird, which may be also compared with the Phænix. The learned Hyde, in his history of the religion of the ancient Persians, has the following sentence, in speaking of the solar titles. Vocatur (scilicet Sol) quoque ; MURGH, i. e. avis, volucris; fortassis eadem ratione qua Ægyptii Solem etiam Phanicam esse mysteriose fingebant: quam quidem fabulam explicavimus in notis nostris ad Itinera Mundi. turning to the אגרת אורחות עולם of Abraham Peritsol, which work Hyde has honoured with a commentary, I was rather disappointed to find absolutely nothing relative to the fable of the Phænix, unless the following words be those to which the learned writer alluded—Hinc etiam poiviz avis dicta, quia rubra seu flam-But the word murgh in Persian signifies, (I believe,) generally a bird, and the name is given sometimes to an aquatic fowl, sometimes to the nightingale, sometimes to the ostrich. I rather magine, that the bird which Hyde meant to indicate was the simurgh. The Persian mythologists say, that this bird dwells among the mountains of Kaf, which girt the universe; that it existed before the creation; and that it has witnessed the duration of 12 periods, each consisting of 7000 years.

From this statement it is easy to see, that the Simurgh of the Persians, like the Phænix of the Egyptians, was a symbol of the revolutions of time. Ormuzd is said to have reigned for 6000

years, and the empire of Ahriman was of the same duration. It is not difficult, even with no other help than that of the Zendavesta, to explain this enigma. The period of 12,000 years indicates the annual revolution partitioned into 12 months. The reign of Ormuzd lasts for six months, from the vernal to the autumnal equinox; and the reign of Ahriman begins with the autumnal equinox, and ends with the vernal. Ormuzd is the type of the Summer Sun; and Ahriman represents that luminary during the win-The ancient Persians also appear to have held, that 12,000 years consituted the period of the creation; and it is remarkable, that the Etruscans had a similar tradition. Some allusion, however, seems to be made to the period assigned for the creation, and the Sabbath which followed it, in the book of Genesis, since the 7000 years, of which the Persian fabulists speak, may be reduced to seven days. The reign of Ormuzd for 6000 years may typify the six days, and the reign of Ahriman for 6000 years may typify the six nights, during which time the work of creation was going forwards. It is very possible, however, that other and more satisfactory solutions of these riddles may be given; while it still is evident, that the fable of the Simurgh relates to the duration of certain astronomical revolutions, or periods of time.

The name given to this bird seems to indicate, that it was considered as a symbol of the month. Among the Persians the month consisted of 30 days; and the word, ..., signifies a bird with the number "thirty" prefixed.

The anka, of which I have already spoken, is the same bird with the simurgh; but the Arabians seem to have added much to the tale. It is remarkable, that the Indians, Persians, and Arabians, represent the Garuda, the Simurgh, and the Anka, as a rational creature endowed with the gift of speech. In this respect the Orientalists have improved upon the fable of the Phænix.

I am afraid that I have already detained my readers too long upon this subject. I shall therefore conclude with observing, that the story of the Phænix contains one of the most clegant allegories to be found in the Egyptian mythology; and that this bird, while it represented time still progressive in its course, and commencing one period as another expired, was also a symbol of the human soul, which passes by death to life.

W. DRUMMOND.

DE L'IMPROVISATION POETIQUE

Chez les Anciens, et particulièrement chez les Grecs et les Romains.

PAR M. RAOUL-ROCHETTE.

Seconde Partie.

SECTION PREMIERE.

De l'Improvisation chez les Grecs.

AVANT d'examiner ce que fut l'Improvisation chez les Grecs, et les diverses formes sons lesquelles elle se produisit, il est important de fixer nos idées sur la nature de leur poësie, et de faire sentir la différence de leurs mœurs poctiques et des nôtres. Chez nous, un poëte ne sonnet ses productions an jugement des yeux et des oreilles, qu'après leur avoir fait subir lui-même la double épreuve de la méditation et de l'étude; ce n'est qu'à l'ombre des bois, ou dans le silence du cabinet qu'il se livre aux inspirations de son génie. Sa muse mystérieuse cherche les réduits les plus obscurs, et ne se plaît que dans les retraites les plus solitaires: l'éclat du jour, les applaudissemens du monde intimident ses transports naissans, arrêtent son premier essor, et ce n'est le plus souvent que par des veilles laborieusement prolongées, qu'il parvient à rendre ses vers dignes de son approbation et de la nôtre. Nous ne trouvons, dans la Grèce antique, rien qui se rapporte à ces idées : c'étoit surtout dans l'imposante solennité des assemblées publiques, ou dans la joyense yvresse des réunions privées, que le talent de ses poëtes aimoit à se produire. Le spectacle des fêtes religieuses et patriotiques qui se succédoient presque sans intervalle chez cette nation spirituelle et sensible, offroit au génie poétique des occasions tonjours sûres et toujours nouvelles, de paroître avec avantage. La présence même des objets les plus capables de l'inspirer, et la certitude de trouver, dans ce nombreux concours d'hommes également passionnés pour le plaisir et pour la gloire, des auditeurs enthousiastes plutôt que des juges sévères, tout excitoit la veine des poètes, tout enflammoit leur imagination; et les accords d'une musique harmonieuse ajoutoient encore à leur verve un nouveau degré d'exaltation. Tel est le sens de cette judicieuse remarque de Quintilien, dout je n'ai fait que développer l'esprit : " la crainte

de ne pas répondre à l'attente de ses auditeurs, aussi bien que l'espoir de la surpasser, double les forces et enflamme le talent du poëte; et il y a cela de remarquable, que tandis que la composition exige la plus entière solitude, l'improvisation au contraire se plust dans le grand nombre de témoins, comme le guerrier s'anime à

l'aspect de ses drapeaux.'"

C'est au milieu de ces sêtes, si favorables à la poësie, que les anciens en ont placé le berceau. Les premiers accens qu'elle fit entendre furent inspirés par le plaisir, dans les réunions champêtres, et, sur ce point, les graves témoignages des philosophes s'accordent avec les ingénieuses allégories des poëtes. 2 Strabon dit 3 que c'étoit un usage familier aux Grecs et aux Barbares d'accompagner les sacrifices divins de fêtes, dont l'enthousiasme et la Musique, (ce sont ses propres expressions,) faisoient communément les frais: ces mots indiquent certainement que, dans les sêtes religieuses de l'Antiquité, la plupart des poesies consacrées au culte, étoient à la fois improvisées et chantées. Et comment, en effet, ces siommes simples, qui ne cultivoient que pour leur agrément un art aussi grossier qu'eux, auroient-ils en le loisir de se livrer à une étude pénible, surtout, quand les vives inspirations d'un cœur reconnoissant sembloient à leurs yeux l'hommage le plus digne de la divinité qu'ils adoroient?

A mesure que la civilisation se perfectionna dans la Grèce, la poësie y prit chaque jour des formes plus sayantes, sans cesser d'être consacrée aux usages les plus populaires. La langue de ses habitans étoit si riche et si variée, leur imagination si prompte et si féconde, que le langage des vers fut longtemps le seul dans lequel ils exprimèrent toutes leurs sensations, aussi bien que toutes leurs idées. Cette inclination générale pour la poësie n'a point échappé à la sagacité de l'utarque, et les expressions dont il se sert +, sont trop remarquables pour n'être pas ici fidèlement rapportées: "Telle étoit, dit il, dans ces siècles seculés, la disposition des esprits, et la pente naturelle qui les entraînoit vers la poësie, que la moindre cause extérieure et l'illusion la plus légère suffi-

⁴ De Pyth. Oracul. § xxiii. tom. ix. p. 286, Hutten:—Σωμάτων ἦνεγκε κράσεις καὶ φύσεις ὁ χρόνος ἐκεῖγος, εὐρουν τι καὶ φορὸι ἐχούσας πρὸς ποίπσεν, αῖς εὐθὺς ἐπεγίνοντο προθυμίαι καὶ ὁρμαὶ καὶ παρασκευαὶ ψυχής, ἐτο ι μό τη τα ποιούσαι μικρᾶς ἐξωθεν ἀρχῆς καὶ προτροπῆς (vulgò παρατροπῆς) τοῦ φανταστικοῦ διομένην, ωἱς εὐθὺς ελκεσθαι πρὸς τὸ οἰκιῖον οὐ μονον—ἀστρολόγους καὶ φιλοσόρους, ἀλλ' ἐν οἴνω τὶ καὶ πένθει (vulgò πάθει) γινομένους, οἰκτου τινὸς ὑποἰρθυίντος, ῆ χαρᾶς προσπεσούσης ωλίσθαν ον εἰς εὐωδὸν γῆρυν. J'ai admis dans ce passage deux corrections de Reiske, et j'ai changé la leçon vulgaire γινομένων en celle de γινομένους, qui m'a semblé faire un sons mellieur.

soient pour produire les plus violens mouvemens de l'âme, les transports les plus passionnés. Et ce n'étoit pas seulement chez les hommes d'un esprit plus cultivé, et sur les objets dont la connoissance leur étoit plus familière, que s'exerçoit cette étonnante vivacité d'injugination. Les impressions les plus subites de la joie ou du chagrin produisoient sur tous les hommes un effet semblable, et, soit dans l'ivresse des festins, soit dans l'accablement de la douleur, ils proféroient sans effort des chants harmonieux." Une pareille faculté est trop merveilleuse en elle-même, et trop contraire à toutes nos idées, pour n'avoir pas trouvé d'incrédules, et je ne suis pas surpris que l'ontenelle se soit égayé aux dépens du bon Plutarque. Ce bel esprit françois avoit trop peu de chaleur dans la tête et de sensibilité dans l'âme, pour croire réelle, pour concevoir même la nature du talent que le

philosophe grec attribue à ses anciens compatriotes.

Par suite de cette disposition naturelle, et de l'habitude qu'elle avoit fait contracter aux Grees, l'usage des vers étoit devenu si commun et si facile parmi eux, qu'ils l'appliquèrent bientôt à toutes sortes d'objets. C'est encore Plutarque qui m'en fournira la preuve: " Il fut un temps, dit ailleurs ce savant et judicieux écrivain, où les vers accompagnés de chants servoient comme de monnoies du discours, où la poësie et la musique, outre les sujets qui leur sont propres, réunissoient à leur domaine l'histoire, la philosophie, et généralement la peinture de toutes les passions, et le récit de tous les faits de quelque importance." ajoute le même auteur,³ on en vint au point de mettre en vers les discours relatifs aux diverses circonstances de la vie privée, à presque tous les besoins de la vie domestique. "Ce fut en vers chantés au son de la lyre, que la plupart des hommes adressèrent des conseils, des consolations ou des reproches. Ce fut en vers qu'ils débitèrent des fables ou des maximes applicables à ces différens motifs, et qu'ils composèrent, les uns par une aptitude naturelle, les autres par l'effet de l'habitude, des Itymnes, des Péans et des Invocations aux Dieux."

Il n'est pas nécessaire de développer le sens de ces divers témoignages; l'improvisation y est marquée à des traits si caractéristiques, qu'il est impossible de s'y méprendre, quoiqu'elle n'y

² De Ryth. Oracul. § xxiv: ἢν οὖν ὅτι λόγου τομισμασιν ἰχρώντο μέτροις καὶ μέλισι καὶ μόδαῖς, πῶσαν μὲν Ιστοςιαν καὶ φιλοσοφιαν, πᾶν δὲ πάθος, ως ἀπλῶς εἰπείν καὶ πρᾶγμα σιμνοτιρας φωνῆς διομινον εἰς ποιησιν καὶ μουσικὴν ἄγοντις.

³ Idem, ibidem: υπό της πρός ποιητικήν ἐπιτηδειότητος, οι πλείστοι διά λύρες και ψόξης Ινουθίτουν, ἐπαβρηβάξοντο, παρικελεύοντο, μύθους καὶ παροιμίας ἐπίραινον, ἔτι δὶ ὕμνους, θιῶν ελχάς, παῆνας, ἐν μέτροις ἐποιοῦντο καὶ μίλισιν, οἱ μὲν δι' εὐφυταν, οἱ δὶ διὰ συνηθείαν.

soit nulle part formellement exprimée. Comment croire, en effet, que dans des circonstances imprévues, et qui se renouveloient à chaque instant, ces hommes aient pu produire sans préparation. comme sans effort, des chants analogues à ces diverses occasions. si l'on n'admet pas qu'ils aient été doucs de la faculté d'improviser sur toutes sortes de matières, soit que cette faculté ait étéchez eux le fruit d'un don naturel, soit qu'ils l'eussent acquise par l'exercice et par l'étude? C'est à cette faculté brillante, qui les rendoit aussi agréables qu'utiles à la société, que les Poëtes durent principalement la considération dont ils vivoient environnés. C'est par elle qu'ils se virent élevés à la dignité d'un ministère public, et investis du glorieux privilège de promulguer les loix, et d'interpréter les volontés des Dieux. Les Poëtes, dans les anciens temps de la Grèce, étoient regardés comme les législateurs des nations, comme les précepteurs du genre humain; et les produstions du génie poétique, qui ne sont que trop souvent considérées parmi nous comme une œuvre frivole, dont le moindre défaut est d'être indifférente au bonheur des peuples, jouissoient alors de ces profonds respects dus à des oracles de la morale. C'étoit pour les poètes, et pour les musiciens dont l'art étoit si étroitement lié avec le leur, qu'avoient été originairement imaginés les termes de philosophes et de sophistes, dénominations honorables, que l'indigne abus qu'en firent depuis des orateurs mercenaires, fit tomber dans le mépris. Les expressions de versificateur et de législateur étoient presque synonymes; Strabon les applique l'une et l'autre² à l'ancien poëte Thalétas, qui florissoit avant Homère. Nons apprenous d'Aristote qu'avant l'invention des lettres on mettoit les loix en musique,4 et de là vient que, dans la langue des Grecs, le même mot désignoit à la fois un chant versifié et une loi. Mais cet usage, qu'Aristote semble restreindre à des temps presque barbares, se maintint même dans les siècles les plus éclairés. Solon, qui, à l'exemple des anciens chantres de la Grèce, réunit avec un égal succès la double qualité de législateur et de poëte, écrivit en vers un traité du gouvernement, qui devoit servir de supplément à ses loix.6 Tyrtée, dont les chants belliqueux con-

⁶ Plutarch. in Solon, § iii.: ce poème politique renfermoit cinq mille vers, au témoignage de Diogène de Laerte (lib. i. c. 2. § 14). Les loix mêmes de Solon avoient été mises par lui en vers, et Plutarque nous en a conservé (ibidem) les deux premiers.

duisirent les Spartiates à la victoire, laissa parmi eux un monument plus durable de son génie et de leur reconnoissance, un code de loix écrit en beaux vers.¹ Tespandre mit en musique celles de Lycurgue,² çe qui suppose qu'elles étoient également rédigées dans un mètre poëtique. Les Thusiens d'Italie, dont l'établissement est d'une époque bien plus moderne encore,³ chantoient dans leurs festins les loix de Charondas,⁴ et ne se faisoient point scrupule de mêler ces graves conceptions de la sagesse aux folâtres jeux de la joie bachique. Enfin, le même usage, étendu à une foule d'actes et de décrets publics, paroît avoir été général dans un grand nombre

de villes grecques.5

On peut tirer de ces faits deux conséquences importantes. La première, c'est que les Grecs étoient doués d'une singulière facilité pour composer des vers, puisqu'ils y mettoient les choses en apparence les plus contraires à la poésie : la seconde, c'est que les Poëtes, interprètes innmédiats des volontés des Dieux et des intentions du législateur, devoient posséder an plus haut degré ce talent, qui semble avoir formé le partage de leur nation éntière, et la principale attribution de leur ministère. Aussi, ne les considéroiton pas comme des êtres vulgaires, pour qui l'art des vers n'étoit qu'un métier obscur, qu'une profession vonée à des occupations solitaires. Ils étoient les compagnons et les conseillers assidus des Princes; admis à leurs festins et mélés dans toutes leurs délibérations, pour leur rappeler sans cesse les loix de la modération et de la justice, que fait trop souvent oublier l'ivresse du plaisir et du pouvoir, ils savoient tempérer l'austérité fàcheuse de ces leçons par les charmes irrésistibles de leur poesie.° C'étoit en eux que résidoit tout l'exercice de la morale publique; c'étoient eux qui faisoient tout l'ornement des réunious privées; et les mêmes honines, dont la voix mâle et forte excitoit l'amour des vertus guerrières, savoient aussi, par des accens doux et paisibles, inspirer le goût des vertus domestiques. Voyez le magnifique portrait qu'Elésiode trace des poètes, ses contemporains et ses rivanx, dont il partageoit les honneurs et dont il surpassoit les talens. Il les représente, dissipant, aux seuls accens de leur voix, les funestes dissentimens qui s'elèvent parmi les hommes; appaisant partout la

discorde, et faisant naître le plaisir; donnant aux rois et aux peuples de sages avis, et d'utilés exemples; recueillant enfin, pour récompense de leurs travaux, la faveur des princes et la vénération

de leurs sujets.

Je vois d'ici mes lecteurs sourire à ces séduisantes images, et je conviens, qu'en ne prenant pour règle de ce qui peut être, que ce qui est, le tableau de nos mœurs actuelles nous dispose peu à croire celui que je viens de tracer des mœurs de la Grèce antique. Dans un siècle, où les guerres de plume excitées par la poèsie, sont si communes et si violentes, comment imaginer qu'il fut un temps où la Poësie devint un lien de paix et de charité parmi les hommes, et que les vers, qui causent aujourd'hui tant de troubles dans le monde, servirent autrefois à y maintenir la tranquillité? Mais ce n'est pas là, aux yeux de l'homme éclairé et de l'observateur impartial, la seule différence essentielle qui distingue notre société de celle des Grecs, et des faits viennent encore à l'appui de ces observations générales. Ayant de partir pour la fatale expédition de Troie, Agamemuon avoit laissé à Mycènes un poëte chargé de veiller sur la conduite de son épouse, et de la retenir, par la douce autorité de son génie, dans le sentier de la vertu, dont elle n'étoit que trop disposée à s'écarter. Ce chantre fidèle réussit longtemps, par des exhortations habilement soutenues du charme des vers et de la mélodie, à empêcher la défaite de cette malheureuse princesse, et l'on sait qu'Egysthe no parvint enfin à triompher de sa résistance, qu'après avoir éloigné de sa personne le vertueux poete qu'il n'avoit pu corrompre.

Homère nous offre encore d'autres exemples de ces mœurs antiques. Le Phémius, qu'il introduit dans le palais d'Ulysse,2 prodiguoit à regret ses chants devant les insolens amans de Pénélope. Forcé longtemps de se soumettre à la nécessité, il obtint aisément sa grâce, lorsqu'Ulysse, vainqueur de ses rivaux, s'apprêtoit à le punir comme un de leurs complices, et l'élémaque lui rendit hautement le témoignage, qu'il avoit vamement cherché à s'affranchir d'un joug sons lequel ce fils du lléros avoit été contraint de plier lui-même. Le Démodocus, qui embellissoit les festins d'Alcinoiis par les accords de sa lyre et par les inspirations de sa muse, n'avoit jamais, plus heureux ou plus sage que Phémius, prostitué son talent à d'indignes usages. Aussi Homère nous le représente-t-il toujours 3 comme jouissant à la cour du Princo et parmi ses propres concitoyens des honneurs qu'il méritoit à double titre par son génie et par son caractère. Enfin, Virgile, pemtre aussi fidèle des mœurs grecques, que soigneux unitateur des

conceptions homériques, place parmi les convives de la reine de Carthage, un Poëte qu'il nomme Iopas, et qui célèbre dans ses vers les beautés et les secrets de la nature, sujet grave et sublime qui convenoit encore aux oreilles de Didon chaste et vertueuse.

Si ces exemples confirment les témoignages de Plutarque, relativement à l'usage qu'on faisoit anciennement dans la Grèce de la poësie et des poëtes, ils prouvent aussi que cette poësie étoit le plus souvent improvisée, et que ces poëtes, dans leurs compositions morales ou politiques, ne faisoient qu'obéir à l'inspiration du moment. C'étoit cette prodigieuse facilité de s'exprimer en vers sur tous les sujets et dans toutes les circonstances que peut offrir la vic publique et privée, qui avoit fait croire aux hommes superstitieux de l'antiquité, que le talent de ces poëtes étoit l'effet de l'influence immédiate de la Divinité, et qui les faisoit considérer eux-mêmes comme des êtres surnaturels. C'est en ces termes que Platon, qui méprisoit les versificateurs de son temps, parle des véritables poëtes. Il n'accorde ce titre qu'à ceux qui cont saisis d'un souffle impétueux et divin; il prétend que l'art ne doit point présider à leurs compositions; que l'enthousiasme seul doit les produire. Il revient souvent sur cette idée, et la présente sous toutes les formes, toujours avec la même assurance; son style revêt aussi l'éclat et la couleur de ses pensées, et l'on diroit qu'en cet endroit Platon a voulu offrir un modèle de l'inspiration dont il fait un précepte: "Les poëtes, dit-il, prétendent qu'ils puisent à des sources de miel et de lait; que, semblables aux abeilles, et portés, comme elles, sur des ailes légères, ils cueillent dans les jardins des muses les fleurs brillantes dont ils décorent leurs vers ; et ils disent la vérité. Un poëte, en effet, est un être léger, ailé et sacré. Rien ne sort de sa veine, s'il n'est tout entier au pouvoir de la Divinité, si sa raison ne s'égare et ne s'éteint. C'est uniquement lorsqu'échauffé par l'harmonie et le rhythme, il entre dans le délire, qu'il compose ces poëmes dignes d'une éternelle admiration. ...L'art ne produit jamais ces merveilles; c'est la faveur céleste qui les opère, et qui, selon les caprices de la muse, dicte à chaque poëte des chants analogues à la nature de son génie; à celui-ci, des Dithyrambes; à celui-là, des Eloges; à tel autre des vers Epiques ou des Iambes. Aucun d'eux ne réussit dans un genre étranger à son talent, parce que ce talent lui-même n'est pas l'effet de l'art, mais celui d'une inspiration surnaturelle....C'est ainsi, ajoute Platon, que la Divinité, mettant à profit les dispositions diverses qu'ils apportent en naissant, les fait servir d'instrumens aveugles à ses volontés, d'interprètes dociles à ses oracles, afin de nous con-

¹ Virgil. Æneid. lib. i. v. 744, et Servius ad hunc loc.
² Plato, in Ion. tom. i. p. 534, 535,

vaincre que tant de belles choses, qui échappent à des êtres privés de sens et de raison, émanent du Dieu même qui les inspire et qui

s'exprime par leur bouche."

A l'appui de ces idées, Platon cite l'exemple d'un poëte qui étoit de Chalcis, en Eubée, et qui se nommoit Tynnichus. Sans avoir jamais rien écrit qui fut digue d'être recueilli, il prononça, par le seul effet de cette influence surnaturelle, un hymne ou péan, qui fut bientôt dans toutes les bouches, et qui, de l'aveu même de l'auteur, n'étoit cependant qu'une production dépourvue d'art et créée sans travail. "Il semble," dit encore Platon, " que la Divinité, en proférant le plus beau des hymnes par l'organe du plus médiocre des poëtes, ait voulu montrer que ces vers, objets de l'admiration des hommes, ne sont pas des œuvres mortelles et de main humaine, mais des ouvrages divins et créés par les Dieux." Qu'on ne suppose pas que ces idées fussent particulières à Platon, et que l'imagination, à laquelle cet éloquent écrivain dut ses défauts aussi bien que ses beautés, l'ait encore entraîné ici hors des bornes de la vérité. En admettant que ses principes ne soient pas incontestables, le fait dont il les autorise, ne sauroit du moins être D'ailleurs, Aristote, qui, comme l'on sait, ne se faisoit pas un devoir de conformer ses opinions à celles du fondateur de l'académie, et qui même adopta souvent des systêmes contraires, par cela seul qu'ils étoient opposés à ceux de son maître, le grave et méthodique Aristote distingue aussi deux sortes de poëtes, ceux qui le deviennent par l'effet d'une disposition naturelle, et ceux qui ne doivent ce talent qu'à un état passager d'aliénation. Ces dernières paroles indiquent clairement, ce me semble, le ravissement extatique dans lequel Platon vouloit que fussent plongés les seus du poëte, pendant tout le temps que duroit sa composition. Le même Aristote confirme ailleurs par un exemple l'induction que je tire ici de son témoignage; il cite² un poëte de Syracuse, nommé Maracus, qui ne faisoit jamais de meilleurs vers que lorsqu'il entroit dans le délire. Un autre philosophe, dont les écrits sont depuis longtemps perdus, mais dont l'opinion sur la poësie nous a été transmise par un poëte, Démocrite, qui affecta souvent de déguiser sous des formes originales et bizarres des idées pleines de goût et de solidité, excluoit formellement, de l'Hélicon, quiconque n'éprouvoit pas cette ivresse,3 ce délire, cet embrasement d'imagination, (ce sont les propres expressions de l'Abbé Arnaud, dont je me sers ici,*) en un mot cet enthousiasme qui élève

Des Improvisateurs, Œuvres Complettes, tom. ii. p. 98.

l'homme au-dessus de lui-même, le transporte dans un nouvel univers, et en faisant taire la raison, souvent même en la troublant, répand sur tous les objets une force et une lumière extraordinaires. Est-il possible d'exprimer plus formellement le caractère d'inspiration qui régnoit dans de pareils ouvrages, et cette inspiration accordée à des poëtes sans génie et sans art, tels que Tynnichus et Maracus, peut-elle se concilier avec le travail lent et pénible des méditations poëtiques? n'est-elle pas l'improvisation même?

Pour achever de nous en convaincre, il suffira d'examiner les expressions, par lesquelles Homère désigne les deux poëtes qu'il introduit dans son Odyssée. Lorsque Phémius, menacé par Ulysse, se jette à ses genoux pour implorer sa clémence : je suis, lui dit-il, instruit par moi-même, c'est à dire, mon talent n'est pas le fruit de l'art ni de l'étude; il est un don de la nature, et le résultat de l'inspiration. Il ajoute : la Divinité mit en moi toutes sortes de chants. N'est-ce pas encore comme s'il lui disoit? je possède, pur une saveur spéciale des Dieux, la faculté de chanter à l'improviste sur toutes sortes de sujets? C'est le même sens que nous devons donner aux paroles dont se sert Homère en parlant de Démodocus: un Dieu lui accorda le talent des vers, et la faculté de chanter sur tous les sujets que son génie lui suggère.2 L'inspiration spontanée me paroît clairement caractérisée par ces derniers mots; et, comme si ce poëte eût voulu prévenir toute espèce d'incertitude à cet égard, il nous en fournit lui-même la preuve matérielle. Démodocus prélude à ses chants, après avoir pris en main sa lyre, et fait placer devant lui la coupe de vin destinée à exalter son génie; 3 c'est la muse elle-même qui dicte ses vers, selon les propres expressions d'Homère, et le reste de son récit désigne encore mieux un poème produit sans piéparation. Ulysse, charmé du talent que le poëte a déployé dans la peinture des désastres de l'armée grecque, lui propose, pour sujet d'un nouveau poëme, de chanter l'aventure du cheval de bois, le stratagême d'Ulysse, et la destruction de Troie par la main des guerriers enfermés dans les flancs de cette machine : " Si tu traites dignement un si noble sujet, poursuit Ulysse, je n'hésiterai plus à proclamer ton génie en présence des hommes, et j'avouerai hautement que tes vers partent d'une inspiration divine." L'occasion étoit brillante, et l'épreuve délicate; un seul instant de retard, en pré-

³ Hom. Odyss. v. 70: πλε δὶ δίπας οίγοιο πιιϊν, ότι θυμός ἀνώγοι.

^{*} Ibidem, v. 73: μοῦσ ἀρ' ἀοιδὸν ἀνῆκιν.

⁵ Hom. Odyss. lib. viii. v. 487, et sqq.

sence d'auditeurs dont l'attente étoit si vivement excitée et l'opinion déjà si favorablement prévenue, un seul mdice d'embarras ou d'hésitation, pouvoit porter à la réputation du poëte une atteinte funeste et irréparable. Démodocus ne paroît pas sentir tont le danger de sa situation, ou plutôt il le brave, pour mieux en triompher. Le défi d'Ulysse et la promesse flatteuse qui le termine. enflamment subitement son imagination, et, sans donner à ses juges ni à lui-niême le moment de la réflexion, il commence à célébrer le fameux événement indiqué à sa muse. La rapidité de cette action est rendue sensible par celle des expressions même d'Homère: L'impulsion immédiate et soudaine de la Divinité y est formellement exprimée, et l'on ne trouvera nulle part, ce me semble, l'absence de toute préparation plus manifest, ment prouvée que dans ce passage de l'Odyssée. Je ne crois donc pas m'abuser en induisant des propres témoignages de l'auteur, qu'il a voulu désigner ici deux chantres improvisateurs; et, si l'opinion de Didyme, d'Eustathe et des autres commentateurs d'Homère, qui prétendent que ce poète s'est peint lui-même dans le personnage de Démodocus, doué de l'inspiration divine, et privé de la vne, si cette opinion, dis-je, est aussi vraie qu'elle me paroît vraiseniblable, ce ne seroit pas être trop hardi, que de prononcer, dès à présent et par suite de ma première induction, ce que j'établirai bientôt par des preuves irrécusables, qu'Homère étoit aussi un poëte improvisateur.

On alléguera peut-être, qu'Homère, usant du privilège accordé aux poètes, n'a mis en scène dans les divers passages que j'ai cités, que des personnages imaginaires. Mais cette objection auroit peu de force par elle-même, et je la crois d'ailleurs absolument dénuée de fondement. D'abord, en admettant que les personnages de Phémius et de Démodocus, ne soient point historiques, comme la plupart de ceux qu'il a introduits dans ses poemes, il ne s'ensuivroit pas de là que la faculté qu'il leur accorde soit purcment fictive ou idéale. Il est permis à un poète de créer de nouveaux acteurs, et de modifier des traditions reçues, selon les besoins de sa fable, et la tournure particulière de ses idées. Mais cette liberté ne s'étend pas, que je sache, jusqu'à supposer à ses personnages des mœurs entièrement chimétiques; et l'on doit soupçonner Homère, moins qu'aucun autre poëte, d'avoir pris une licence aussi condamnable. Ce qui fait surtout le charme de ses tableaux, c'est la pureté de son dessin, et la franchise de son coloris; tous les traits, toutes les nuances en sont exactement puisés dans la nature, et lors même que ses conceptions s'éloignent le plus de la vérité historique, il respecte constamment la vérité morale. Peintre fidèle des antiques exploits et des mœurs

^{1 1)} દુ વહેલે ' હ છે' હિલ્લાલકોડ ઉરાવ્યા, મેલ્લાન વ્રાથમ છે જે જે જે જે જે છે.

contemporaines, il ne fait agir et parler ses personnages que conformément aux habitudes et aux idées de leur âge, et, comme ce siècle différoit peu, sinon par les temps, du moins par les coutumes, de celui où il écrivoit lui-même, on reconnoît, en le lisant, que la tradition le guide presque autant que son génie, et la naïveté de ses expressions semble attester partout la fidélité de ses récits. Aussi plusieurs critiques lui reprochèrent-ils, avec plus de fondement, quoiqu'avec encore moins de justice, d'avoir peint dans toute leur simplicité les mœurs des tems qui l'avoient précédé. Il n'est donc pas probable que, dans les portraits si parfaitement analogues qu'il nous a tracés de Phémius et de Démodocus, il ne se soit appliqué à peindre que des êtres imaginaires, et qu'aucun modèle existant ou connu ne lui en ait fourni les traits ou inspiré l'idée.

le me défierois de mes idées, même dans le cas où elles me paroîtroient le plus conformes aux témoignages de l'antiquité et aux principes de la critique, si je voyois qu'elles me fussent particulières: et j'ai pour règle de suspendre mon jugement, jusqu'à ce qu'il me paroisse suffisamment autorisé. L'illusion, qui résulte des argumens favorables à notre opinion, est si naturelle et si involontaire, qu'on ne sauroit trop se mettre en garde contre cette dangereuse séduction; quand il s'agit de preuves purement morales, il seroit injuste d'exiger des autres la même conviction qu'elles ont opérée en nous, et les degrés de croyance ne doivent se déterminer que d'après coux de l'autorité. Mais, quand je vois des idées, suffisamment raisonnables en elles-mêmes, partagées, dans leur application rigoureuse, par un critique d'un goût aussi fin que d'une érudition profonde, puis-je exprimer, avec les restrictions du doute, une opinion qui réunit alors tous les caractères de la vérité? Ce critique est M. Pope, qui ne se borna pas à donner à son pays la meilleure traduction poctique de l'Iliade, qui ait été encore exécutée dans nos idiônies modernes, mais qui voulut mériter également bien de la république entière des lettres par ses On sait que ce recherches sur la personne et les écrits d'Homère. morceau de critique, si recommandable à double titre, et par le grand poëte qui en est l'objet, et par celui qui en est l'auteur, surpasse autant, par la finesse et la solidité du jugement, que par la profondeur et l'étendue des connoissances, tous les autres écrits composés sur le même sujet, et que les opinions de Pope, comme savant et comme homme de goût, méritent ici d'être doublement considérées. On me permettra donc d'ajouter plus de confiance à mes idées, quand je les trouve conformes aux siennes, et mes lecteurs me sauront gré sans doute de mettre sous leurs yeux le témoignage original, dont ils soupçonneroient peut-être que j'aurois

Voy. Barthélemy, Voyage du J. Anacharsis, Introduction, art. Homère.

Homer saw in his own time, may be gathered from his description of Demodocus and Phemius, whom he has introduced to celebrate his profession. The imperfect risings of the art lay then among the extempore singers of stories at banquets, who were half singers, half musicians."

L'histoire, au reste, confirme encore des observations foudées sur la nature même des poësies d'Homère; l'histoire nous apprend que Phémius et Démodocus existèrent réellement tels qu'il les a dépeints, et dans le siècle et dans les lieux où il les a placés. Démétrius de Phalère les cite² l'un et l'autre parmi les plus anciens chantres dont la tradition littéraire eut conservé le souvenir. L'auteur de la vie d'Homère attribuée à Hérodote parle³ d'un Phémius qui enseignoit les Belles-Lettres à Smyrne, et qui fut le précepteur et le père adoptif d'Homère; d'où l'on a conjecturé que ce poëte avoit depuis consacré dans son Odyssée le nom et l'éloge d'un instituteur dont la mémoire lui devoit être chère à tant de titres. C'est sans doute à cette source qu'Eustathe avoit puisé la tradition qu'il rapporte sur l'existence et sur la profession de Phémius, et Plutarque ne fait point difficulté d'admettre cette tradition, comme certaine et absolument historique; enfin, dans un autre traité faussement attribué au même écrivain, mais dont l'auteur s'appuie sur le témoignage d'Ephore, il est fait mention de Phémius, qui professoit les Belles-Lettres à Smyrne. pourrois produire, à l'égard de Démodosus, les mêmes autorités, et j'en ajouterois d'autres encore, si je croyois qu'elles pussent donner plus de poids aux premières.7 Mais je ne dois pas négliger une observation de Plutarque sur le caractère de la poësie de ces deux chantres improvisateurs. Il remarque que la diction de leurs poëmes étoit asservie aux mêmes mêtres que celle de Stésichore et des autres anciens poëtes, qui, dans le même temps qu'ils composoient leurs vers, y adaptoient les airs conve-

nables. Ce passage, rapproché de tous ceux par lesquels j'ai essayé d'établir la nature du talent de Phémius et de Démodocus, achève de prouver la justesse de notre opinion; et l'on ne sauroit maintenant douter que ces productions, nées sans préparation sur des sujets imprévus, et accompagnées du son des instruniens, n'aient été à la fois et de véritables poèmes et des poèmes improvisés.

Je n'ai point cité jusqu'ici le témoignage de Platon, relativement à l'existence de Phémius, quoiqu'il fut assurément un des plus graves et des plus anciens que je pusse alléguer en ma faveur. C'est dans son Dialogue d'Ion, dont j'ai déjà rapporté plusieurs passages, que Platon parle de Phémius, d'Ithaque, et lui donne le titre de Rhapsode. Je pourrois, dès à présent, conclure de ce témoignage, que l'art des Rhapsodes, tel au moins qu'il étoit cultivé dans les siècles antérieurs à Homère, n'étoit que celui des improvisateurs; et les considérations dont Platon accompagne ce fait littéraire, justifieroient sans doute, aux yeux de mes lecteurs, comme aux mieus, l'importante induction que j'en tire. négligeant aiusi mes propres avantages, j'ai acquis le droit de ne point m'arrêter à combattre les opinions systématiques qui contrarient la mienue, et je crois que la peine que je m'épargne, est un ennui que j'évite à mes lecteurs. Seroit-il, par exemple, fort utile à leur instruction et nécessaire au succès de ma cause, de réfuter les assertions, tout au moins très hazardées, de Dion Chrysostonie, sur l'ignorance absolue où l'on étoit touchant le nom du précepteur d'Homère et les autres particularités de la destinée de ce poëte !2 comme si le sentiment de ce Rhéteur moderne, quelque secommandable qu'il soit à plusieurs égards, pouvoit prévaloir sur une réunion de témoignages puisés aux plus pures sources de l'autiquité? Je dois encore moins m'inquiéter du scepticisme dédaigneux de M. Wolf, qui, sans donner d'autres preuves de son opinion, que son opinion elle-même, rejette parmi les contes les plus extravagans, l'existence de Thémius et de Pionapis attestée par Diodore et par d'autres auteurs. Il me semble qu'on peut se dispenser de combattre des assertions, qui, ne reposant sur aucune base, ne sauroient faire aucune autorité. admet, comme règle de critique, que chacun peut, en ne suivant que ses propres idées, traiter de rêveries et de contes populaires toutes les traditions anciennes qui ne s'accordent point avec elles;

Plato, in Ione; tom. i. p. 534: Πιεί τοῦ Φημίου 'Ιθακησίου έα-ψοδοῦ.

s'il est permis de rejetter comme un écrivain absurde et visionnaire, tout auteur dont le sentiment ne se rapportera point au nôtre, il sera, j'en conviens, bien plus commode d'écrire ainsi l'histoire; et la critique perdra, par ce moyen, plusieurs des grandes difficultés qui en ont rendu jusqu'ici l'étude si redoutable et le talent si rare. Mais, en tout cas, j'espère qu'on ne me refusera pas le droit que chacun s'arroge, de composer l'histoire à sa manière, et que, pourvu que la vraisemblance s'y trouve, les témoignages que j'ai allégués à l'appui de mes idées, ne seront pas un motif pour les condamner. Qu'on ne me tienne pas compte de la peine que j'ai prise de recueillir ces témoignages; qu'on blâme même la faiblesse que j'ai d'y ajouter foi; j'y consens: mais, du moins, qu'on me juge, comme mes adversaires, d'après mes propres opinions, indépendamment des preuves étrangères dont j'ai cru devoir les appuyer.

(On donnera la suite au No. prochain.)

* 'ΑΠΑΘΗΝΑΙΟΙ. Hoc vocabulum, quod ignorat Schneideri Lexicon, legitur in J. Poll. iii. 58. Παμπόνηροι δε, οι Θεοπόμπου τοῦ συγγραφέως ἀπολίται, καὶ ἀφέταιροι, καὶ ἀπαθηναῖοι. Vox παμπόνηρος in H. Steph. 'Fhes. ἀμαρτύρως affertur. Sed extat, et in Aristoph.

Acharn. 854. Παύσων ο παμπόνηρος.

'ΑΤΤΑΓΑΣ. "'Ατταγάς sannon άττάγας, ut in Λeliani loco mox laudando?] Λίγυπτίας memorat Clem. Alex. Pædagog. ii. 1. p. 140. c. inter alias aves. Utrum vero epitheton Aigunt, additum sit, ut pateat, id genus avium non nisi in Aegypto reperiri, atque adeo nomen quoque esse Aegyptium, an ut intelligatur, Aegyptias attagas præstantiores iis esse, quas Attıci ἀτταγᾶς appellant, non ego dixerim." Sturzius de Dial. Maced. et Alex. p. 88, =clxxiii. a. Si vir doctus Aeliani H. A. xv. 27. in memoriain revocasset, epitheton Λίγυπτ. melius forte intellexisset : Λόγος τις λέγει τοὺς ὄρνιθας τοὺς άττάγας μετακομισθέντας είς Λίγυπτον έκ Λυδίας, καὶ ἀφεθέντας είς τὰς ὖλας, τὰ μὲν πρῶτα ὄρτυγος φωνὴν ἀφιέναι, κ. τ. λ. Vide nov. Thes. Gr. L. p. cccxxvii. b. Totum hoc caput, notante Schnei-DERO, e Socrate ap. Athen. ix. 388. a. descriptum est. Per epitheton vero Aiyvat. non intelligi potest, ut censet Sturzius, "id genus avium non nisi in Ægypto reperiri," quod falsum esset, cum Aelianus et Socrates Lydiæ indigenam avem faciant, cum maxime in veterum deliciis esset attagen Ionicus, testibus Horatio Epod. ii. 53. Martiale xiii. 61. Plin. x. 68. cum, teste Aristoph. in Acham. 873., frequentes essent in Bootia (v. Athen. ix. 388. b. ibique Casauboni not.,) cum denique, teste Plinio I. c. "et in Gallia, Hispaniaque caperentur, et per Alpes etiam." Quid est igitur de hac qua stione statuendum? alteram Sturzii sententiam amplectendam esse, quod, scilicet, Aegyptius attagen præstantior ils sit, quos Attici ἀτταγᾶς appellant? Imo attagen Ionicus, ut modo dixi, non Aegyptius, in veterum deliciis erat. At Clementi utpote Alexandrino, cui Aegyptius attagen melius Ionico sapere potuisset aliquid indulgendum est. Et quid impedit, quo minus credamus, posteriores gulæ deditos Aegyptias attagenas omnibus aliis prætulisse? Equidem suspicor Clementem Aegyptiæ attagenæ primas dedisse partes, propterea quod in Aegypto frequentissimæ essent.

ΓΙΓΓΛΑΡΟΣ. J. Poll. iv. 82., Νίγλασος δὲ μικσός τις αὐλίσκος, Αἰγύπτιος, μοναυλία πρόσφορος. Sic edidit Γ. Η. pro γίγγλαρος, et sic legitur in C. V. teste Kuhnio. Jungermanni Ms. habet, Νίγλαροι, " sed forte oculis aberrabat librarius ad id, quod mox segm. 83. (Μέλη δὲ αὐλημάτων, κρούματα, συρίγματα, τερετισμοί, τερετίσματα, νίγλαροι.)" Jungerm. vide Jablonskii Gloss. vocc. Aeg. in nov. Thes. Gr. L. p. ccxiv. a. et Spicileg. Vocc. pro Aeg. habit. ibid. p. cccxxxviii. b. Sed his duabus rationibus ductus vulgatam lectionem γίγγλαρος textui restituendam esse omnino ceuseo:

1. Νίγλαρος non est μικρός τις αὐλίσκος, Αιγύπτιος, μοναυλία φρόσφορος, teste enim ipso Polluce in segm. 83. l. c. νίγλαροι sunt moditibiarum: Hesychio, Suidæ, et Photio sunt τερετίσματα, καὶ περίεργα κρούματα et νίγλαρος Scholiastæ Aristoph. Acharn. 554. est τεξίμα et μέλος μουσικὸν παρακελευστικόν. V. loca in nov. Thes. Gr. L. laudata. Hanc expositionem confirmant versus in Aristoph. Acharn. 554., Αὐλῶν, κελευστῶν, νιγλάρων, συριγμάτων, Ευροlidis versus apud Photium, Τοιαῦτα μέντοι νιγλαρεύων κρούματα, et Pherecratis versus ap. Plut. de Musica, p. 1142. a. ab Elmsleio ad Acharn. l. c. sic dispositi:

Είς τοὺς χυκλίους χοροὺς γὰρ εἰσηνέγκατο
Έξαςμονίους, ὑπερβολαίους τ' ἀνοσίους,
Καὶ νιγλάρους, ὥσπερ τε τὰς ῥαφάνους ὅλην
Καμπῶν Γκάμπτων, Βrunck:] με κατεμέστωσε.

Sed vir χριτικώτατος nos docere debuerat, quo sensu dixerit Pherecrates, Έξαρμονίους, ὑπερβολαίους, ἀνοσίους, ΚΑΙ νιγλάρους ε Vide Brunckium in nov. Thes. Gr. L. l. c. laudatum.

2. Com νίγλαρος nusquam alibi, quam in Pollucis loco ex Hemsterhusii emendatione, exponatur parva tibia, firmissimum argumentum, quo γίγγλαρος probetur esse tibiæ genus, tibi præbebit Anti-Atticista in ΒΕΚΚΕΒΙ Anecd. Gr. T. i. p. 88.: *ΓΙΓΓΛΛΡΙΑ οἱ ΑΤΛΗΤΑΙ λέγουσι γένος ὁργάνων. Voce γιγγλά-

* ΣΑΤΑΔΑΙ. Vide Sturzium de Dial. Maced. et Alex. p. 46 = clxiv. b. qui in textu edidit Σαυάδαι, (et sic legitur in Albertina Hesychii Ed.) at in Ind. suo idem vir d. recte reposuit Σαυάδαι, int Δευάδαι.

ΣΑΠΦΕΙΡΟΣ, ή, Lexica exhibent, (v. nov. Thes. Gr. L. p. cccxxxiv. b.), at ap. Mich. Psellum in Canticum Canticorum, (v. Meursii Opp. T. viii. p. 320.,) legitur ὁ σάπφειρος:

'Ο λίθος γὰς ὁ σάπφειρος τοῦτο σημαίνειν θέλει· "Εστι γὰς οὐχανοειδής οὖτος ὁ λίθος μόνος.

Sic ò, et ἡ σμάραγδος: v. nov. Thes. Gr. L. p. cclxxix. b.—
lxxx. a. Lucianus De Domo T. iii. p. 198.: 'Ο δὲ ταῦτ' ἀφεὶς, ἐς
τὴν Σαρδω, ἡ τὸν σμάραγδον, ἡ τὸν ὅρμον, ἡ τὸ ψέλλιον ἀποβλέπει.
"Τὸν σμ. P. H. et J. plene: τ" aliæ per compendium, quod
facile permutatur cum τήν. Sed τὴν plenissmie Fl. sine compendio. At genus nondum muto, quia et Latinis sæpe mascul. est.
Vid. Burm. ad Ovid. Met. ii. 24." J. F. Reitzius.

^{1 &}quot; Διαβλίπω, Perspicio, vel Dispicio, Visu penetro," H. St. Thes. Ind. Exemplum verbi hujusce in Thes. desideratum præbet Heliodori loc. in textu laudatus. Vide Schneid. Lex., ubi Plato et Plutarchus citantur.

* ΣΕΘΡΩΙΤΗΣ. Schol. Platon. p. 202., Ly τῷ Σεθρωίτη νομῷ. V. not. in. Ind. p. v. ad nov. Thes. Gr. L. Strabo xvii. p. 1140. ed. FALCONERII: "Εστι δέ καλ γομός Σεθρείτης παρά την λίμνην. Lege Σεθρωίτης. Teste enim FALCONERIO ipso, "Scripti Σεθρωίτης, Marg. Cas. sic Par. i. 5. Med. 3. 4. Bre. Esc. Mosc." Ptolemæo iv. 5. Σεθεωίτου νομού metropolis est Heraclea minor. "Stephanus Ethnicographus et Josephus urbem Sethron memorant; Strabo, Plinius, Ptolemæus, nomum Sethroïten; Ptolemæus vero Heracleopolim minorem vult fuisse metropolin Sethroitici nomi." J. R. Foisterus ap. FALCONERIUM ad Strab. p. 1318. b. Sed quid est nomen urbis, cujus gentile sit Σεθρωίτης? Certe a Σίθρον formari non potest Σεθρωίτης, quod gentile a Σεθρώον potius for-At vox Σεθρώον est nihili, quippe quod nullibi mandum est. exstet. An legendum \(\Sigma_{\text{e}}\text{poittys}\)? Equidem sic legendum censeo. At Σεθροίτης α Σέθρον descendere non potest. In Σέθρον igitur corruptela latet, sed ulcus a magno Salmasio persanatum est. Steph. Byz.: Σέθρον πόλις Λίγύπτου, ὁ πολίτης, Σεθροίτης, ως 'Αρσενοίτης, 'Αλέξανδρος τρίτω Λίγυπτιακών. " Lege Σεθρόη," inquit Salmasius, " et ita legendum ; gentile enim Zeleotry; a Zeleon, ut * 'Αρσενοίτης ub 'Αρσινόη: alioqui a Σέθρον venit Σεθρίτης." Salmasii correctionem non improbat L. Holstenius.

ΣΙΙΣΑΜΙΟΝ. Ps.-Herod. Epimer. Mss.: Σησάμιον, τὸ τρωγό-

Beliol. Platon. p. 186.:— Ο λωτός δίνδρον έστιν εν Λιβύη κατα Μέμφιν φυόμενω, εδμείγεθες, ξιλίκον άπιος, ή μεκρώ ελάστων [ελαστον]· ψύλλον δὶ ἐντομας εχον, καὶ πρινώδες το δὶ ξύλον μείλαν. Γένη δ' αὐτοῦ πλείω, διαφοράς εχοντα τοῦς καρποῖς. Ο δὶ καρπὸς ώσπερ πύωμος πιπαίνεται, ώσπερ [οί] βότευις, μιταβάλλων τὰς χρόως. Φύιται δὶ κατά [καθάπερ] τὰ μύρτα πα;άλληλα πυκνός iν τοῖς βλαστοῖς. Εσθιόμενον [ἐσθιόμενος] δὶ iν τοῖς Λωτοφάγοις καλουμένοις γλυκύς έστι, καὶ ἡδύς, καὶ ἀσινής, καὶ ἔτι πρὸς τὰς κοιλίας ἀγαθός. ἡδίων δ' ὁ ἀπύρηνος. Ποιούσι δὲ καὶ οίνον ἐξ αὐτοῦ. Τὸ δένδρον ἐὲ καὶ πολύ, καὶ πολύκαρπον, καὶ παρά την * Λωτοφαγιαν νήσον, ἀνέχουσαν [ἀπίχουσαν] τῆς χώρας, [dele punctum] μικρόν [,] ωσαύτως. Locus hic e Theophrasti H. P. iv. 4, sumtus est. Verba vero in ntroque scriptore pessime corrupta sunt, sed mutuam sibi facem -accendant. In D. Heinsii et Bodæi editionibus sic leguntur:—"Εστι δὶ τοῦ λωτοῦ, τὸ μὶν ίδιον γένος εὐμίγεθες, ἡλίκον ἀπιος, ἡ μικρὸν ἔλαττον, φύλλον δὶ, ἐντομάς ἔχον καὶ πεινωδες. τὸ μὰν ξύλον, μέλαν γίνη δε αύτου πλείω, διαφοράς έχοντα τοις καρποίς ο δε καρπός ήλίκος κύπμος, πεπαίνιται δὶ, ώσπερ οἱ βοτρυις, μιταβάλλων τὰς χροιώς. Φύιται δὶ καθάπες τὰ μύρτα παράλληλα, πυχνός επί των βλαστών εσθιόμενος δε έν τοις Λωτοφάγοις καλουμείνοις, γλυκύς, πόδις, και άσινης, και έτι πρός την κοιλίαν άγαθον [άγαθός] ήδίων έξ [ό] άπύς ηνος τσει γάρ καὶ τοιούτον γίνος. Ποιούσε δὶ καὶ οίνον έξ αὐτού. Πολύ δὶ τὸ δίνδρον καὶ πολύκαρπον.— Εστι μέν οὖν τη νήσφ της Αωτοφαγίας Φάριδι παλουμίνη, πολύς αὐτη δὶ ἀπόπιιται καὶ ἀπίχιι [τῆς γω ρας] μίκερν ω μεν ένταυθα μόνον, άλλα πολλώ πλι ων έν τη ήπιερω. Πλείστον γαρ όλως έν τη Λιβύη καθάπερ είρηται, τουτο, και ό παλίουρός έστιν. STACKHOUSIUS, VII doct. mihique amic. male omisit το ante idior. Idem καί posuit ante τὸ μὶν ξύλον, et pro πυκτός male edidit πυκτώς. Sed recte reposuit έσθώμενος et άγαθός pro vulgatis ἐσθιόμενον et ἀγαθόν: item ὁ ante ἀπύρηνος. Idem pro ίξ αὐτοῦ male dedit ἰξ αὐτῶν: item iv ante τῆ νήσω inseruit, ut legitur in Ald. et Basil. Edd. Item καὶ ἀπίχει ante μικεὸν omisit, post μικεὸν intelligendum censens ἀπὸ γῆς. Item pro τοῦτο καὶ legit πλησίον τούτου καί. Stephanus insulam Αωτοφόρον yocari tradit; Strabo Αωτοφαγίτιν. Bodæus p. 326. a. e Strabone legendum conficit τη νήσω τη Λωτοφαγιτίδι, sed nihil mutandum; Scholiastes enim Platonis babet, Haga rin Autopayiar ritore.

ACCOUNT OF LITERARY FORGERIES.

From ROBERTSON on the Parian Chronicle.

THE world has been often imposed upon by spurious books and inscriptions.

Bishop Stillingfleet, having occasion to question the authenticity of a book, entitled, Scotorum Antiquitates, ascribed by Hector Boethus to one Verenumdus, a Spannard, makes the following

remarks, which are applicable to the present subject.

"It is well known that it was no unusual thing in that age [about the beginning of the sixteenth century] to publish books under the names of ancient authors—For, about that time, men began to be inquisitive into matters of antiquity; and therefore some, who had more learning, and better inventions than others, set themselves to work, to gratify the curiosity of those, who longed to see something of the antiquities of their own country. And such things were so eagerly and implicitly received by less judicious persons, that it proved no easy matter to convince them of the imposture."

The celebrated Dr. Bentley makes the following observations to the same effect.

"To torge and counterfeit books, and father them upon great names, has been a practice almost as old as letters. But it was then most of all in fashion, when the kings of Pergamus and Alexandria, rivalling one another in the magnificence and copiousness of their libraries, gave great rates for any treatises, that carried the names of celebrated authors; which was an invitation to the scribes and copiers of those times, to enhance the price of their wares, by ascribing them to men of fame and reputation; and to suppress the true names, that would have yielded less money. And now and then even an author, who wrote for bread, and made a traffic of his labours, would purposely conceal limiself, and personate some old writer of eminent note; giving the title and credit of his works to the dead, that he himself might the better live by them. But what was then done chiefly for lucre, was afterwards done out

^{&#}x27; Vermundus is said to have lived about the year 1090. Fabric. Bibl. Med. & Inf. Lat. Hector Boethius flourished in 1526. Gesner. Or, in 1510. Konig. Bibl.

² Stillingfleet, Orig Brit. pref. p. 50. ³ Galen. in Hippoc. de Naturà Hominia, com. ii. p. 17. edit. Basil.

of glory and affectation, as an exercise of style, and an ostentation of wit. In this the tribe of the sophists are principally concerned: in whose schools it was the ordinary task to compose 'Illomorias,' to make speeches, and write letters in the name and character of some hero, or great commander, or philosopher: Τίνας αν είποι λόγους, "What would Achilles, Medea, or Alexander say in such or such circumstances?" Thus Ovid, we see, who was bred up in that way, wrote love-letters in the names of Penelope, and the rest. It is true, they came abroad under his own name; because they were written in Latin and in verse, and so had no colour or pretence to be the originals of the Grecian ladies. But some of the Greek sophists had the success and satisfaction to see their essays. in that kind, pass with some readers for the genuine works of those they endeavoured to express. This, no doubt, was great content and joy to them; being as full a testimony of their skill in imitation. as the birds gave to the painter, when they pecked at his grapes. One of them 2 indeed has dealt ingenuously, and confessed, that he feigned the answers to Brutus, only as a trial of skill; but most of them took the other way, and, concealing their own names, put off their copies for originals; preferring that silent pride and fraudulent pleasure, though it was to die with them, before an honest commendation from posterity for being good imitators. And to speak freely, the greatest part of mankind are so easily imposed on in this way, that there is too great an invitation to put the trick upon them."3

If we were to take a general view of the republic of letters, we should be astonished at the number of supposititious books, which have been imposed upon the world by knaves and cheats.

Jamblicus, on the testimony of Seleucus, informs us, that Hermes Trismegistus was the author of 20,000 books; and, on the authority of Manetho, 36,525.4 There are many volumes now

* Allocutio, qua a Gracis identification, est imitatio sermonis ad mores et suppositas personas accommodata: ut, quibus verbis uti potuisset Andromache, Hectore mortio. Priscian. See the Ethopæiæ of Severus the sophist, at the end of the Rhetores Selecti, published by Gale.

Mithrulates.—The publication, to which Dr. Bentley alludes, consists of 35 epistles, supposed to have been written by M. Brutus; and the same number of answers, with a preface, by Mithrulates, to king Mithridates his cousin.—Epistolæ, quas nobis reliquit nescio quis, Bruti nomine, nomine Phalaridis, nomine Seneca et Panh, quid aliud censeri possunt quam declamatiunculæ? Erasm. Ep. 1.1. 1. Fabric. Bibl. Græc. 1. ii. c. 10. vol. i. p. 414.

³ Bent, Dissert. upon Phal. p. 6. edit. 1777.

⁴ Jamb. de Myst. sect. vni. c. i.—Julius Firmicus also ascribes 20,000 volumes to Hermes. Mercurius Ægyptius conscripserat viginti millia voluminum de variis substantus & principiis, & potestatum ordinibus cœlestium. Mathes, l. ii.

extant under his name; but not one of them is genuine. Two of the most considerable, the Pæmander, and the dialogue entitled Asclepius, are metaphysical rhapsodies, containing a medley of Christian, Platonic, and Egyptian doctrines, without either taste or consistency; and appear to have been written since the commencement of Christianity.

Twenty or thirty thousand books, produced by one author! The very idea shocks all human credibility; and, if ever such a number really existed, under the name of Hermes, we may fairly

conclude, that the greatest part of them were forgeries.2

The two books of Egyptian hieroglyphics, which are ascribed to Horus Apollo, or Horapollo, and said to have been translated out of the Egyptian language into Greek by one Philippus, are the

spurious production of some Greek sophist.

An epic poem, called the Argonautics, eighty-six hymns, and other pieces, pass under the name of Orpheus, the celebrated Thracian, who lived at the time of the Argonautic expedition.³ But they are evidently suppositious. As the ancients have told us that Orpheus could make wild beasts, trees, rocks, and rivers listen to his music, it is no wonder that certain poets in later ages assumed his character, and sent their productions into the world under his auspices. His name was an incomparable passport and recommendation to the writings of obscure bards. Aristotle asserted, that no such poet as Orpheus ever existed: "Orpheum poetain docet Aristoteles nunquam fuisse." Cicero seems to agree with

Suidas says, a little extravagantly, that Orpheus lived "eleven generations before the Trojan war." But who shall pretend to ascertain the age of a poet, who is said to have been the son of Apollo and Calliope, and to have gone down to the regions of Pluto to fetch his wife? Saxius places him 1255 years before Christ.

^{*} Casanbon calls the Pæmander, semichristiani merum figmentum, and gives sufficient reasons for his opinion. Exercit. in Baron. Annal. num. 18. p. 55. Stillingfl. Orig. Sacræ, b. ii. c. 2. Asclepius is in the same style, and seems to be a production of the same brain.

² Patricius assigns some very probable reasons for the ascription of all these books to Hermes.—Quòd fuent, says he, in more antiquissimorum hommum, ut si cui libro anthornatem accedere cuperent, vel Dei alicujus, nt Ægyptii Mercurn, vel hommis alicujus misignis, nomine ornatent, reverentă scilicet quâdam; vel etiam quòd vendibiliorem eo nomine sperarent fore; vel quòd fæmi proprio, alicin nominis, quàm sin insignibus, gratiam majorem consequi sperarent ac immortalitatem; vel postremò, quòd reverà author libri ignoraretur, viderenturque in eo contenta dogmata non insi magni viri esse; aut etiam negligentià quadam, ac nulla librorum expensione, alicujus eos viri celebris nomine misigniverunt. Patric. Discuss. Peripat. tom. i. l. 3. p. 29. Vid. Galen. de Simpl. Medic. Facul. l. vi.

⁴ Cic. de Nat. Dcor. l. i. § 107.

Aristotle; and Vossius, Huetius, and others, maintain the same opinion.

· But, without calling his existence in question, we may be fully

assured, that none of his works are now remaining.

Musæus is said to have been the son, or the disciple of Orpheus.² The poem of Hero and Leander, which is published under his name, is probably the work of some Greek poet in the fifth or sixth century.³ It is observed, that he has borrowed very largely from the Dionysiaca of Nonnus.⁴ We often meet with the name of Musæus; but never find the least intimation of this poem, in any ancient writer. Tzetzes, I believe, is the first, who expressly mentions it.⁵ It was first printed in 1486.

We have a history, De Excidio Trojæ, of the Destruction of Troy, under the name of Dares Phrygius. In an epistle prefixed, it is pretended, that this Dares was present at the siege; that his manuscript was discovered at Athens many years afterwards, by C.

Nepos, and translated by him into Latin.

But the inelegant, not to say, the despicable style in which it is

Puto enim, trimmviros istos poëseos, Orphea, Musaum, Linum, non fuisse; sed esse nomina ab antiqua Phænicum lingua, qua usi Cadmus et aliquamdiu posteri. Voss. de Art. Poet. c. 13. p. 78. Huet. Dem. Evang. prop. iv. c. 8. § 19. p. 184. edit. 1680.—Vid. Suid. in v. 'Ορρεύς," where," says Dr. Bentley, "there is an account of half a score of such counterfeit writers." Dissert. on Phal. p. 10. Ælian. Var. Hist. l. viii. c. 6. Diog. Laert. in proœm. § 5. Pliny places Orpheus in the list of magicians. Nat. Hist. l. xxx. (. 1.

Some writers pretend, that the Argonautics, the hymns, and other poetical pieces, which are extant under the name of Orpheus, are the works of Onomacritus, who lived about 520 years before the Christian ara.—This notion may be as groundless as the other.

² Diod. Sic. l. iv. p. 232. Suidas.

³ Musæum hunc recentiorem circumcirca tempora Coluthi, Tryphiodori, Joannis Gazæi, Nonni, Christodori, Leonis Magistri, innlitis scilicet post Christum natum annis, floruisse certissimum est, præter orationis structuram, ipso operis titulo, uhi se grammaticum appellat, Μουσαίου τοῦ γραμματικοῦ τὰ καθ' Ἡρὰ καὶ Λιατδρον; et istiusmodi inscriptionem in phiribus me legisse memini manuscriptis codicibus. Allat. de Patriâ Homeri, c. 4. p. 75.

An quæso, mei monitus criticorum vaticiniis, Musæo, Orpheo, Lino, Phocylidi, et alus inni menis, tum Pelasgis, tum Romanis, poemata spuria multa, et illegituma, assignata fuisse, hodieque assignari insclese, ut veteri Phocylidi quæ supersunt, Musæo de Herone et Leandro poema, scire quis unquam potuisset? Maussaci Dissert. Crit. de Harpocratione, p. 399. edit. 1683.

If we may depend on the authority of Josephus and Sextus Empiricus, there were no writings remaining, in their days, among the Greeks, of higher antiquity, than the poems of Homer. See notes to chap. ix. p. 127.

⁴ Paræns in Musæum.

⁵ Tzet. Chil. ii. hist. 38. v. 435.—Tzetzes flourished about the year 1176

written, as well as many other circumstances, clearly demonstrate the falsity of these pretences.

There is another production of the same character, in six books, De Bello Trojano, of the Trojan War, bearing the name of Dictys Cretensis. In the preface, and an epistle, which accompanies this work, it is asserted, that the author attended Idomencus to the siege of Troy, and wrote the history of that expedition in the Greek language, but in Phænician characters; that his work was buried with him, at his own request, in a coffer made of pewter or tin; that, in consequence of an earthquake, the coffer was discovered, in the reign of Nero; and some time afterwards translated into Latin, by one Q. Septimius Romanus.

This legendary tale, and some others, which I shall have occasion to mention, are evidently formed upon the old story of king Numa, who is said to have ordered that his books should be safely enclosed in a stone chest, and buried by his side. After they had lain in the ground 490 years, they were, it seems, accidentally discovered, and appeared as fiesh, as if they had been newly written! Some people imagined, they were kept in this excellent preservation by a miracle. Others, probably, a little more sagacions than the rest, upon observing the Egyptian papyrus, of which they were made, the freshness of the writing, and the contents, looked upon them as forgeries. It is however agreed on all hands, that Q. Petilius, the prætor, by a decree of the senate, caused them to be publicly burnt; which certainly would not have been suffered, if there had been any reason to beheve that they were the genuine remains of the religious Nama.

A small volume, containing 148 epistles, has been repeatedly published under the name and character of Phalaris, tyrant of Agrigentum. In the year 1695, the Hon. Mr. Boyle printed a new edition of these Epistles, which occasioned a memorable controversy between him and 12r. Bentley. The latter, in a dissortation,

⁶ Bentley's Dissertation was printed at the end of the second edition of Mr. Wotton's Reflections on ancient and modern Learning, in 1097. The Examination of Bentley's Dissertation, by the Hon. Mr. Boyle, appeared about nine months afterwards; and a second edition of it, before the end of the year 1698. This drew from Dr. Bentley another edition of his Dissertation, in 1699, with a preface, and very large additions, in answer to the examiner.

well known to the learned, considers the chronology, the language, the contents, and the first appearance of these epistles; and incontestably proves that they are the spurious productions of some sophist, who lived in a much later age than the real Phalaris. To this Dissertation the learned author has subjoined some critical remarks on the Epistles of Themistocles, Socrates, and Euripides; and on Æsop's Fables, showing that they are likewise supposititious.

Some of the dialogues, which are published among the works of Plato, were written by other authors. Erasmus thinks this so very evident, that, he who does not perceive it, must have no discernment.²

Diogenes Laertius observes, that the dialogues, entitled, Eryxias, Acephalus or Sisyphus, Axiochus, and Demodocus, are undoubtedly spurious.³ The Definitions, the Dialogue on Virtue, and that on Justice, are generally placed in the same class.⁴ The Epinomis has been ascribed to Philippus Opuntius, one of Plato's disciples;⁵ the second Alcibiades to Xenophon,⁶ and Phædon to Panætius.⁷

The very judicious and accurate Corsini deduces a new argument against the authenticity of the epistles, ascribed to Themistocles, from a mustake, which the author has made in the thirteenth spistle, concerning the Corinthian month Panemus. Fast. Attic. Dissert. iii. § 22.

• In what relates to the want of authenticity, in some of Plato's Dialogues, and the works of others, I give the sentiments of learned writers, without any design to adopt or maintain their opinions, when they are not confirmed by unquestionable evidence.

Laertius reckons up "near 400 books," which, he says, were undoubtedly written by Aristotle. Patricius has collected the titles of 747, which have been ascribed to that philosopher. But many of these pieces, as he has sufficiently proved, are supposititious. Galen and Ammonius give us an anecdote, which accounts for this inundation of spurious publications, under the name of Aristotle.

"When the Attali and the Ptolemies," says Galen, "were rivaling one another in forming and enriching their respective libraries, the knavery of forging books and titles began [to be a common practice.] For, in order to get money, many artful schemers prefixed the names of celebrated authors to their manuscripts, and, under such fictitious characters, sold them to those princes."

Ammonius relates the same story. "It is reported," says he, "that Ptolemy Philadelphus, being desirons of collecting the works of Anstotle, as indeed he was of collecting all sorts of books, gave rewards to those, who brought him any treatise of that philosopher. Some therefore, with a design to make an advantage of his hierality, affixed the name of Anstotle to the compositions of other authors."

On this account, it is almost impossible for us to know, which are the genuine productions of Aristoile.

The treatise on Elocution, usually ascribed to Demetrius Phalereus, though not unworthy of his character, is most probably the work of some other Demetrius, or some rhetorician of a later age, who has assumed his name.⁵

Vossius, Gale, &c. ascribe it to some other Demetrius. Auctor videtur NO. XXXI. Cl. Jl. VOL. XVI. 1

¹ A τον αξιθμόν ίγγυς ήκει σεττακοσίων, quæ ad quadringentorum numerum ferè pervennunt. Diog Laert. I. v § 34.

² Si lii, ex vains authoribus, atque ipso Aristotele, collecti, libri triginta septem, reliquis a Laertio enumeratis, atque iis, qui extant, addantur, septingentorum quadraginta septem numerum adimplebunt. Patric. Discuss Peripat. I. ti. p. 18.——The same books were probably mentioned by different authors, under different titles. This circumstance seems to have deceived many writers, who have enumerated the works of the ancients.

⁴ Ππολεμπίου τό, Φιλαδίλου πάνυ τπουδακίκαι φασί περί τὰ ᾿Αριστοτελικὰ συγγρίμματα, τές καὶ περί τὰ λοικὰ, καὶ χρήματα διδοναι τοῖς προσφέρουσεν αὐτῷ βίβλους του φελοσιμου όθεν τενὰ: χρηματίσασθαι βουλομενει, ἐπιγράφοντες συγγράμματα τῷ τοῦ φελοσόρου ονόματε, προσῆίου. Atunt Ptolemæum Phylidelphum incensum studio fuisse circa Aristotelis libros, sicuti et circa alios, et munera deilisse iis, qui sibi adferrent libros philosophi. Quare quidam ditari inde volentes, inscripserunt libros nomine philosophi, eique detulcrunt. Animon. Com. in Arist. Categ. D. 10.

The Scholast on the Nubes of Aristophanes, quoting a passage in the treatise on Elecution, says, ως έρη Διονύτιος δ Αλικαρνασσεὺς εν τῷ πιρὶ Ερμηνιίας: For this and other reasons, Valesius ascribes the treatise on Elecution to Dionysius Halicarnasseus. Valesii Excerpta, p. 65. Menagii Observ. in Diog. Lacrt. l. v. § 81. Hod. de Bibl Text. l. i. c. 9. p. 55.

A hundred and thirty comedies were circulated at Rome, under the name of Plautus; but we are assured, that Varro, an excellent judge in this case, included only twenty-one in the list of that author's works.

Among the various pieces, which have been falsely ascribed to Cicero, the Consolatio is the most remarkable. This tract made its first appearance in the year 1583, and is generally supposed to have been the work of Sigonius. "The essay de Consolatione," says Dr. Bentley, "as coming from a skilful hand, may perhaps pass for Cicero's with some, as long as Cicero himself shall last." There is however an obvious and striking circumstance attending it, which alone seems to destroy all its prefensions to authenticity; and that is, the passages quoted by Lactantius from Cicero's real work do not exist in the present Consolatio.

In the second century, we find the practice of forging books so very common, and so eagerly pursued, that it was impossible to guard against literary impositions. We have a memorable instance of those fraudule it schemes in the case of Galen. That emment physician having been the author of many volumes, not only on medical subjects, but on philosophy, grammar, and thetoric, lest his reputation should be injured by spinious publications, gave the world a particular account of his writings. Yet, notwithstanding this precaution, above forty books were fathered upon him, which are not included in his catalogue.

⁷ Galeno, quanquam de libris suis librum edidisset, quo testatum relinqueret, quinam a se conscripti libri essent, sunt tamen reperti homines

In this manner a multitude of spurious productions have been published under the names of Homer, Æsop, Euripides, Hippocrates, Aristophanes, Lysias, Demosthenes, Plutarch, Lucian; Virgil, Ovid, Seneca, Quintilian, and almost every other eminent author of Greece and Rome.²

The forgeries of Annins Viterbiensis are well known. In the year 1497, this impudent monk published a volume, containing, as he pretended, the Antiquities of Berosus in five books; one book of Manetho's Supplement to Berosus; one book of Xenophon's Æquivoca; two books of Fabius Pictor on the Golden Age, and the Origin of Rome; one book of Myrsilus Lesbius on the Pelasgic War; one book of Cato's Origines; one book of an Itinerary by Antonius Pius; one book of C. Sempromus, on the Division of Italy; a chronological tract by Archilochus; one book of Metasthenes on the Assyrian and Persian Annals; an Epitome of History by Philo in one book; a tract of Marius Aretius on the Situation of Sicily; and a Dialogue, containing a description of Spain, by the same author.

These fragments were illustrated by the comments of Annins himself; and for some years passed for the genume works of the authors, whose names they bear. They are now universally exploded, as the fictions of the editor.

The learned Dr. Prideaux, having occasion to mention the forgeries of Annus, the Butish History of Geoffrey of Monmouth,⁵

andaculi, qui illi pra ter a se nominatos ascripserunt libros plusquam quadraginta. Patric. Discuss. Peripat tom 1.1.3 p 29

Harpocration, in his excellent Lexicon on the Ten Orators of Greece, when he mentions any oration of Lysias, or of others, the authenticity of which is not sufficiently ascertained, usually subjoins the words, it γνόσως, if it be genuine." And this useful cantion he repeats, on many occasions, in the course of his references v. p. 11, 13, 16, 17, 22, 23, & althi passim.

4 Berosi, sacerdotis Chahlaici antiquitation libri quinque, &c. Roma, 1497. folio. This collection was afterwards printed at Venice, Paris, Basil, Antwerp, and other places.

⁵ Geoffrey of Monniouth hard in the time of Henry the First and Stephen, and was bishop of St. Asaph in 1152. In his British History he affirms, that British the great-grandson of Alicas, and after him above seventy glorious monarchs, reigned in this island, during a period of 1053 years, before the invasion of Julius Casar. He continues his nairative to the death of Cadwallader, in the year 689.

This history contains the story of king Lear and his daughters; an account of the wonderful exploits of Uther Pendragon, and king Arthur; the prophecies of Merlin, and many similar curiosities.

and other productions of the same stamp, subjoins this reflection: "All these are no other than the fictions of the first editors. They framed them to perpetuate their names by the publication; and they have truly done so, for they are still remembered for it; but no otherwise, than under the style of INFAMOUS IMPOSTORS."

It is remarkable, that no province of literature has been so grievously infested with cheats and forgers, as that of Jewish and ecclesiastical antiquity2. Here we read of the BOOKS of Abel, Seth, Enoch, Shem, Abraham, and Og the giant; the TESTA-MENTS of Adam, Noah, Abraham, Job, Moses, Solomon, and the twelve patriarchs; the LITURGIES of Matthew, Mark, John, James, Peter, the Virgin Mary, and Jesus Christ; the ACTS of Andrew, John, Mark, Matthias, Paul, Peter, Philip, Thomas, Pilate, Caiaphas, and Thecla; the EPISTLES of Luke to Galen, Peter to James, John to a man who had the dropsy, Paul to the Laodiceans, and the Virgin Mary to Ignatius; the GOSPELS of James, Andrew, Thomas, Philip, Bartholomew, Matthias, Barnabas, Thaddæus, Peter, Paul, Nicodemus, Judas Iscariot, and Eve; the REVELATIONS of Peter, Stephen, Paul, Thomas, Solomon, Moses, Job, Elias, Abraham, Noah, Adam; the MA-GICAL WRITINGS of Solomon, Joseph, Abraham, Ham, and Noah.3

To this list we may add the following extract from a decree of pope Gelasius I. made in the year 494, De Libris apocryphis, &c.

The decree, from which this catalogue is taken, is supposed by Dr. Cave,² and some other ecclesiastical writers, to be suppositious. But the learned Casaubon speaks of it in much more favourable terms. For having mentioned the gospel according to the Egyptians, the prophecy of Ham, the apocalypse of Moses, and other notorious forgeries, he calls it, "insigniter salutare decretum," i very salutary decree, in which, he says, many books of this despicable sort are specified and condemned.³

However, whether it is genuine or not, it will serve to show us, what numbers of absurd and scandalous publications were imposed upon the world, in the first ages of Christianity, under the respect-ble names of apostles and evangelists. "Hanc legent," says Varreius on a quotation from the same decree, "hic duximus subjicindam, ut melius intelligatur, quantum præpostera hommum ingenia fallacibus hujusmodi et fucosis artibus delectentur." —Supposing the decree itself is a forgery, it is but an addition to the apositions already mentioned.

If we descend to the primitive fathers, we shall find a multitude

² Cave, Hist. Liter. sub an. 492.

⁴ De Beroso Censura, p. 14.

Fabric. Cod. Apoc. p. 65 135. Varrern Censura, p. 14. &c.

³ Casaub. in Baron. Annal. Exercit. 1. p. 22. 54.

of spurious productions under their names. Cave enumerates thirty pieces of that kind, which have been ascribed to Cyprian; thirty, which have appeared under the name of Jerom; sixty, which have been published as the works of Austin; seventy, which have been fathered on Chrysostom; and so on, in proportion to the re-

putation of each respective writer.

The number of forgenes, false records, and counterfeit antiquities, imposed upon the world by the advocates of the church of Rome, in support of their religion, or, more properly speaking, their system of superstition, exceeds almost all imagination, and affords a deplorable instance of the depravity of mankind, and the facility with which knaves and bigots have suppressed every suggestion of conscience, reason, and religion, while they were engaged in the pursuit of what is absurdly, if not ironically, called a Pious fraud!

If we confine our observations to the present century, and to our own country in particular, we shall meet with several notorious

instances of literary craft and imposition.

The late Psalmanazar wrote a fictitious history of Formosa,³ and invented a new language, which, he pretended, was the language of that island. The imposition was supported for some time; and the anthor was caressed as a prodigy of abstinence, piety, and learning. But in the latter part of his life, his conscience began to upbraid him; and, in a posthimous publication, he acknowledged, that the account, which he had given of Formosa, and of his travels and conversion from paganism to Christianty, was an infamous fiction.⁴

In the year 1747, the literati were surprised at the appearance of an Essay on Milton's Use and Imitation of the Moderns, in his

* Cave, Hist, Liter.

² See a book, entuied Roman Forgeries, published in 1673.

Psalmanazar died in 1763, about the eighty-sixth year of his age.

4 Memoirs of ****, commonly known b. the name of George Psalmanazar, a reputed native of Formosa, written by himself, in order to be pub-

hshed after his death, &c. 8vo. 1764.

In his will be says: "The principal manuscript I thought myself in duty bound to leave behind, is a faithful narrative of my education, and the sallies of my wretched youthful years, and the various ways by which I was, in some measure, iniavoidably led into the base and shameful imposture, of passing upon the world for a native of Formosa, and a convert to Christianity, and backing it with a fictitious account of that island, and of my own travels, conversion, &c. all or most of it hatched in my own brain, without regard to truth and honesty." p. 5, 6.

³ An historical and geographical Description of Formosa, 8vo. 1704.—A second edition of this work was published in 1705, with a preface, containing, "an answer of every thing, that had been objected against the author and his book."

Paradise Lost, by William Lauder; the tendency of which was to show, that Milton was a plaguary. In pursuance of this design, he charged Milton with having borrowed many parts of his plan, many passages, sentiments, and images, from the Sacotis of Masenius, the Adamis Exil of Grotius, the Trimiphus Pacis of Staphorstius, the Comædia Apocalyptica of John Fox, the Locusta of Phineas Fletcher, the Bellum Angelicum of Taubman, and other similar productions.

Some of the examples which he produced in support of this accusation, here such a striking resemblance to passages in the Paradise Lost, that many of his readers were inclined to applaud his sagacity, and the propriety of his remarks.

But while the enemies of Milton were shouting, Io triumphe! and insulting the memory of the minred poet, an acute and learned writer rose up in his defence, and effectually exposed this master-piece of frand and imposition, by demonstrating, that Lander had inserted several passages of Hog's translation; of Paradise Lost, and other lines of his own composition, into the extracts, which he had produced from Masenius, Staphorstins, and others; and then urged those very lines as a proof, that Milton had copied them.

Lander commenced his attack upon Milton in the Gentleman's Magazine for January 1747, and continued his animalversions, at different times, in that publication. An imaginary success prompted him to reprint his extracts and observations, with considerable additions, in a separate volume, 8vo which appeared in December 1749.

² Jacobus Masenms was professor of thetoric and poetry, in the Jesuits' college at Cologn. His Sarcotis consists of five books, and was printed about the year 1654. An elegant edition of this poem, and of some other pieces, by Masenius and Grenau, was published at Paris in 1771, with some observations on Lander's controversy.

Grotnis is said to have written his tragedy, contiled, Adamus Exul, when he was only eighteen years of age. It was printed at Leyden in 1601; but was not inserted in the collection of his poems.

Caspar Staphorshus was a Dirich poet and divine. His Triumphiis Pacis was a congratulatory poem, on the conclusion of the peace between the states of Holland and the commonwealth of England, in 1655

John Fox, the martyrologist, published his Comcedia Apocalyptica, or Christus Triumphans, in 1551.

Phineas Fletcher was Fellow of King's College, Cambridge. His poem against the Jesuits, entitled Locustæ, vel Pietas Jesuitica, was printed in 1627.

Taubman, the author of Bellum Angelicum, printed about the year 1604, was the celebrated commentator on Plautus and Virgil.

³ Paraphrasis poetica in tria Johannis Miltoni, V. C. poemata, viz. Paradisum Amissum, Paradisum Recuperatum, et Samsonem Agonisten. Autore Guhelmo Hogao. Londini, 1690.

4 Milton vindicated from the charge of plagiarism, brought against him by Mr. Lauder; and Lauder himself convicted of several forceries and

As this charge was unanswerable, Lander thought proper to throw himself on the candor of the public, by subscribing a pcintential acknowledgment, dictated by a learned friend, of all his

interpolations in the writers he had quoted.1

In the year 1762, an enterprizing writer published an epic poem in six books, entitled Fingal, and other pieces, of a singular character, under the name of Ossian, which were said to have been translated from the Galic or Erse. The truth of this assertion has been frequently controverted. It is however strenuously maintained by those who are advocates for the literary glory of Caledonia. But the very existence of Ossian, if ever there was such a poet, is, like the history of Orpheus, enveloped in fable and romance; and though we may allow the pretended translator to have collected some traditionary stories, some ancient tragments, and some strolling ballads, we may reasonably suspect, that the greatest part of these poems have been composed by the editor, as he has never condescended to favour the world with the works of Ossian in their original language, though such a publication has been frequently requested; and would have not only silenced all objections, but have been esteemed a valuable currosity in the republic of letters.3

About the beginning of the year 1777, the attention of the public was excited by a volume of Poems, which were said to have been written at Bristol by Thomas Rowley, a secular priest of that city, and others, in the fifteenth century. These pieces were read with surprise and admiration, and occasioned a variety of conjectures, relative to then authenticity. It was asserted, that

gross impositions on the public. By John Douglas, M. A. [late bishop of Salisbury, Ed.] 8vo. 1751.

A second edition of this painphlet was published in 1756.

² Dr. Johnson required, that the original should be deposited in either the king's or the marischal college at Aberdeen, and submitted to public inspection; but this was never done. Hawkins's Life of Johnson, p. 488.

⁴ In the reigns of Henry VI. and Edward IV.

This confession was entitled, A Letter to the Rev. Mr. Douglas, occasioned by his vindication of Milton, &c. By Wm. Lauder, A. M. 410. 1751. It was dictated by Dr. Johnson, who, at first, had conceived a favorable opinion of Lauder's abilities and integrity. Lauder however, in the year 1754, retracted his confession, detended his essay, and made a new attack upon Milton, in a pamphlet, entitled, "King Charles I. vindicated from the charge of plagiarism, brought against him by Milton; and Milton himself convicted of forgery, and a gross imposition on the public."—Lauder died in Barbadoes, about the year 1771.

³ It is said, that Ossian was the son of Fingal, a king of Scotland, celebrated for his prowess; that he lived in the beginning of the fourth century; and that these poems are superior to those of all other Caledonian bards, both in genius and antiquity.

the original manuscripts had been found in an old chest in Redcliff church, at Bristol, by one Chatterton the sexton; that Chatterton gave them to his nephew, the master of a writing-school in Pile-Street; and that, after the death of the latter, they fell into the hands of his son, Thomas Chatterton, who sent some of them to the editors of the magazines, and disposed of others.

Some learned writers have maintained, that they are the genuine productions of Rowley;² others have supposed, that they were not written by Rowley, but forged by Chatterton,³ who probably derived the first idea of such a project from some old parchments, which might have been found, as he asserted, in a chest in Redcliff church.

This opinion seems to be much more probable than the other, for the following reasons.

1. It is hardly to be imagined, that all the poems, ascribed to Rowley, could have lain in a chest, unobserved and unexamined, for the space of 300 years; and that there should not, during this long interval, have been one, among all the learned vicars of Redcliff church, who had the curiosity to examine, and the sagacity to discover, the contents of this wonderful repository.

2. The phrascology, the splendid descriptions, the poetical images, the harmony of the versification, very unusual with writers of the fifteenth century, the manifest imitation of later poets, some apparent anachronisms, and OTHER CIRCUMSTANCES, are strong presumptive evidences, that they are not the compositions of Rowley.

Chatterton's abilities for a work of this nature can hardly be doubted, if we attend either to his comments on the poems attributed to Rowley, or to many similar pieces, which, we are assured, are his genuine and acknowledged productions.

Account of Chatterton by Dean Milles.

² Their authenticity is asserted in several publications, particularly the following:—" Poems, supposed to have been written at Bristol, by Thomas Rowley, &c. with a Commentary. By Jeremiah Milles, Dean of Exeter, 4to. 1782."

[&]quot;Observations upon the Poems of Thomas Rowley, in which the authenticity of those poems is ascertained. By Jacob Bryant, Esq. 8vo. 1782."

Thomas Chatterton, the kero of this controversy, was born Nov. 20. 1752, and educated at a charity-school in Bristol. At the age of fourteen, he was arricled clerk to an attorney in that city. In April 1770, he came to London, in hopes of advancing his fortune by his pen; but he was so miserably disappointed, that about four months afterwards, in a fit of despair, he put an end to his life, at the age of seventeen years and nine months.

^{*} See Remarks on Chatterton's Miscellanies by the Author of this Dissertation, in the Critical Review for August 1778, where it is shewn, that there have been many farly Geniuses, equal or superior to Chatterton, in the republic of letters.

But, not to dwell any longer on supposititious BOOKS, let us

proceed to fictitious INSCRIPTIONS.

About the year 1435, Cyriacus Anconitanus, surnamed the Antiquary, collected inscriptions, and other remains of antiquity, in different parts of Europe, Asia, and Africa. He pretcuded to have found a multitude of inscriptions in Spain, as well as in other countries, which Ambrosius Morales, and other Spanish historians, quoted upon his authority. But the learned and judicious Antonius Augustinus, archbishop of Tarragon, assures us, that many of these inscriptions were fictitious; and that, in his time, none of them were to be seen in Spain.²

In 1534, Petrus Apianus and Bartholomæus Amantius published a large collection of antiquities at Ingolstadt, in which they inserted a considerable number of those which had been either collected or invented by Kyriacus.³ The learned writer I have just now

On this occasion, the present Dissertator, though he owns those insignificant remarks, would wish to intimate, that his concern in the same Review extended only from August 1764 to September 1785 inclusive; and that he is not, at present, accountable for any criticisms which appear in that publication.

Cyriacus's inscriptions, in three volumes, folio, entitled, Antiquarum Rerum Commentaria, were never entirely published. Some of them only were communicated by himself to his friends; about 200 were printed by C. Moronus in 1660, and others have appeared in different collections.

A small volume in 12mo. cutitled, Kyriaci Anconitani Itinerarium, was published by Laurentius Mehus, at Florence, in 1742, containing eight Letters by Kyriacus, and a preface by the editor, in vindication of the author's literary character. But this publication contains no inscriptions,

nor any very important information.

² Cyriaci Anconitani inscriptiones plurinas in Annalibus Ilispania Ainbrosius Morales temere descripsit. B. Mirari equident soleo in tot tantisque antiquis inscriptionibus, quas ille attulit, inillas hodie in Hispania legi. A. Illud incommodi est, videri Joannem Anniuni & Cyriaciun, similisque farinæ homines, Hispanos iridere voluisse, confictis Hispanorium rebus gestis sub Noâ, Tubale; serie rem contextá regum falsorum, quasi nostris regnassent temporibus; fictis adhæc lapidibus, de bello cum Viriatha, & Sertorio; civili quoque Casaris ac Pompen, &c. Augustini Antiquitatum Dialogi. xi. p. 161

Augustinus's Dialogues were published in the Spanish language in 1587, and translated into Latin by And. Schottus, 1617. The author died in

1588, aged 71 years. Voss. de Hist. Lat. l. m. c. 10. p. 809.

Reinesius speaks favourably of Cyriacus. Inscript. Antiq. praf. p. 11.

This collection hears the following title: Inscriptiones sacrosanctae vetustatis, non illæ quidem Romanæ, sed totius ferè orbis, summo studio ac maximis impensis terrà marique conquisitæ, feliciter meipiumt. Magnifico viro, domino Raymundo Fuggero, &c. Petrus Apianus Mathematicus, & Bartholomaus Amantius Poeta. D. E. D. Ingolstadii, anno MDXXXIV.

Primi, qui excerpta ex Kyriaci schedis typis excuderunt, fuere Petrus Apianus & Bartholomæus Amantius. Kyriaci Itin. præf. p. 59.

cited affirms, that many of these inscriptions are forged by different authors.

About the year 1520, Alexander Geraldinus pretended to have found in various parts of Ethiopia, on both sides of the equinoxial line, many Roman inscriptions and antiquities, more valuable (if genuine) than all the inscriptions and antiquities which the rest of the world could produce. But it is observable, that no traveller, besides himself, ever saw these curiosities; and, as M. de la Mothe le Vayer remarks, "it is the greatest impertinence to raise imaginary pillars, and bear testimony to the conquests and dominion of the Romans, in places, where apparently no Roman ever set his foot, and in direct opposition to their own historians." Geraldinus appears to have been as great a traveller, and—as great a romancer, as Leo Africanus: par nobile fratrum!

In 1636, Curtius Inghiramius published a volume of Tuscan Antiquities,⁴ containing a multitude of Latin inscriptions, relative to the origin of Volaterra, Sena, Rome, &c. which, he says, he found under-ground at Scornellum, near Volaterra. The inscriptions, he tells us, were written by one Prosperus Fesulanus, who lived in the time of Cicero,⁵ and deposited by him in that place, with an epistle to the finder, in which he prophetically describes the said lighiramius; lays many strict injunctions on him not to communicate the originals to any one; and denounces the most horrible calamities on such as should presume to steal, to touch them, to depreciate the credit of the finder, or rob him of the glory, to which he was entitled for the discovery of these inestimable treasures.⁶

In antiquitatibus orbis torms, a Petro Apiano & Bartholomæo Amantio foràs datis, nette multæ sint a diversis auctoribus inscriptiones. Aug. Dial vi. p. 162. Menagiana, tom. iv. p. 203.—One of the first in this collection is the foolish prophecy of H. Cajadus, which will be mentioned hereafter.

⁶ Alius, si forte invenerit, eas scripturas tangere non audeat; alioquin superfim infernorumque deorum iram expertus peribit infelix... Si quis has scripturas quovis modo sibi arripuerit, famæ et corporis jacturam faciet

It is easy to see the author's views in throwing out these denunciations. Though they were perfectly absurd and ridiculous, they were plainly intended to check the impertinent curiosity, the ani-

madversions, and the ridicule of his opposers.

The whole performance however bears the most obvious marks of fraud and imposition. The characters do not in the least correspond with the mode of writing in the time of Cicero; the Latinity is mean and barbarous; the customs, which are occasionally mentioned, were unknown in ancient Rome; and the stories, which are told of the patriarch Noah, are alone sufficient to expose the grossness of the cheat.

To these remarks we may add, that the artist very simply and inadvertently wrote his inscriptions on paper, which was known to

have been made about the time of the pretended discovery.

Some have ascribed this performance to Postellus; some, to Paganinus Gaudentius; others affirm, that the author was Thomas Phædrus or Fædrus, who was keeper of the Vatican library, about the year 1490. It is most probable, that Inghiramius himself was the real fabricator of all these ridiculous inscriptions.

But the most enterprizing and eminent practitioner in the art of making fictitious inscriptions, was Annius of Viterbo, whom I have already mentioned. Antonius Augustinus gives us the following account of the process, which Annius observed in his forgeries.

"Mihi Latinus Latinius Viterbiensis, vir doctus, bonæque fidei, de Joanne Annio, Viterbiensi monacho, narrare jucundè solebat lapidi insculpendas curâsse literas, quem vineæ infodi jusserat, non procul a Viterbio. Cùmque fodienda esset vinea, ad lapidem usque ut fodiendo pervenirent jussit; narrans in libris se reperisse, templum ibi orbis terrarum antiquissimum latere. Terrâ jam effossâ, primus, qui lapidem invenit, vinitor accurrit; paulatini detegi sarcophagum imperat. Hic stupens, lapidis antiquitatem, & literas a se confictas, admiratur; ac describens, ad urbis sena-

⁵ Latinus Latinius was born at Viterbo about the year 1513. He published notes on Tertullian, and a work, entitled, Bibliotheca sacra et profana, sive observationes, correctiones, conjecturæ, & variæ lectiones.

Literary Forgeries.

tores lætus confugit, & civitatis honori fore persuadet, in amplissimo publicè spectari loco. Viterbii enim urbis originem contineri, quæ bis mille annis Romana esset urbe a Romulo condità longè antiquior, utpote ab Iside & Osiride conditæ. Fabulas hic suas, quibus abundabat, venditavit, factumque ut ille jusserat. Fertur manuscripta inscriptio ficta, typis etiam evulgata, hoc initio, Ego sum Isis."

"Latinus Latinius, a native of Viterbo, a man of learning and veracity, used to relate, with some humour, the following anecdote

of John Annius, a Dominican friar of that city.

"Annius got an inscription engraved on a stone, which he buried in a vineyard near Viterbo. When the labourers were employed in digging the ground, he directed them to proceed till they came to the spot where the stone was deposited; telling them he had found in his books, that the ruins of the most ancient temple in the world lay under-ground in that place. After the earth was removed, the stone actually appeared; upon which the vinedresser, who first discovered this wonderful curiosity, ran to Aunius, and acquainted him with what he had found. The sarcophagus was ordered to be removed with all possible care. Anuius, in the mean time, seemed to be astonished at the antiquity of the In the height stone, and extremely delighted with the inscription. of his pretended exultation, he flew to the magistrates of Viterbo, expatiated on the nature and importance of the discovery, and persuaded them, that this venerable monument of antiquity would be an everlasting honour to the city, if they would remove it to a conspicuous place, where it might be publicly exhibited. He observed, that it related to the origin of Viterbo; and that Rome, founded 2000 years since by Romulus, was far inferior in point of antiquity to Viterbo, which was built by Isis and Osiris. With these romantic stories, which he readily invented, he amused the public; and his orders were instantly obeyed. An inscription was circulated in manuscript, and afterwards printed, beginning with these words, Ego sum Isis, I am Isis."

A project of the same kind was managen, with some success, by one Hermicus Cajadus, or Hermio Gajado, a Portuguese poet, about the year 1505. When his countrymen had made a conquest of several places in Africa, and the East Indies, he composed some Latin verses, in the style of a Sibylline prophecy, foretelling these conquests; and having engraved them on three marble columns, he MUTILATED THE STONES, and DEFACED some of the inscriptions, in order to give them an appearance of antiquity. He

August. Dial xi p. 160.
Cajadus died of intoxication in 1508. Ladvocat.

then buried them in the ground; and, at a proper opportunity, contrived a scheme for the discovery, which was artfully managed, and attended with great exultation. The inscription, which was undefaced, was read, admired, touched and kissed, with the profoundest veneration; and afterwards published as a divine prophecy.

The Duilian inscription has been reckoned a most curious and valuable relic of antiquity,2 yet Selden seems to question its au-

¹ Is Latinis carminibus commentus fuerat Sibyllinam vaticinationem, in columnis marmoreis incisam, quæ per ambages significabat, Indos sub imperium & ditionem Lusitanorium esse venturos, eosque lapides datà opera detruncatos, ut aliqua inessent an i quittatis vestigia, obrui præcepit. . . Tum vero omnes, pro se quisque legere, admirari, versus illos fatidicos venerari, manu tangere, exosculari Ita Sibyllina fabula vires acquirit eindo, ac tandem per totum terrarum orbem divulgata, fides ei ilbique et auctoritas adjungitur, hodieque typis excusa circumfertur in fronte codicis, cui titulus est, "Inscriptiones antiquæ," Varrerii Censura in quendam Auctorem, qui sub falsà Inscriptione Berosi Chalden circumfertur, p. 15. ed t. 1598, Fabric. Dibl. Lat. l. iv. c. 13. vol. ii. p. 607.

² C. Duilius commanded the Roman fleet in the first Carthaginian war, and gamed a complete victory. To perpetuate the memory of this mumph, a pillar of white marble was erected to his honour at Rome. This pillar is called Columna rostiata, from the rostra, or beaks of ships, with which it was adorned. On the basis of the column was an inscription, recording the exploits of Duilius, and the value of the booty, which was taken in the Carthaginian ships. The remains of this pillar were accidentally dug up, in the year 1560, in the place, which was formerly the Forum Romanium; and, by the order of Cardinal Alexander Farnese, were removed to the capitol.

The inscription, which is in old Latin, is supposed to have been written 260 years before the Christian ara, and is reckoned the most ancient Latin monument now remaining.

Justus Lipsus endeavoured to supply the deficiencies in the inscription. Pet. Ciacconius did the same, and explained the sense in a learned commentary, entitled, Pet. Ciacconi in Columnæ Rostratæ C. Duilii inscriptionem, a se conjecturâ suppletam, Commentarius. Lug. Bat. 1597. Græv.

thenticity; for having occasion to mention its age, in speaking of the Parian Chronicle, he intimates his suspicions in these words, si nimirum genuina est.'

Reinesius asserts, that Fulvius Ursinus has published many fic-

titious inscriptions.2

Fleetwood, in his Inscriptionum Antiquarum Sylloge, informs his readers, that though he was, as much as possible, on his guard against false and fictitious inscriptions, he often found, that he had inadvertently inserted, "plurimas apertè spurias," many that are evidently spurious. And Stillingflect affirms, that there are many counterfeits in Gruter's collection.

As a farther confirmation of what I have here observed, I shall subjoin the remarks of a learned writer, who in this instance has

advanced none of his usual paradoxes.

"Falsarum inscriptionum architectos proximum nostro sæculum INNUMEROS tulit; egregios artifices, qui, quas ipsi magnâ, ut sibi quidem videbantur, arte concinnassent, has aut in marmoribus, aut in tabulis æneis, plumbeisve, aut lateritiis fistulis, aut in antiquis denique numismatis, lectas a se fuisse mentirentur. Sed et aliquot aute ætatibus fraus cadem in usu fuit. Plena sunt pergamena manu exarata fictis in otio inscriptionibus, epitaphiis, elogiis; quæ cum inde ernuntur a viris etiam alioqui magnis ac probis, sed minus justo suspiciosis, ab eorundem suffragio pondus illa accipiunt; ac deinde miriticè iuquinant perturbantque prophanam historiam, utinam verò non etiam ecclesiasticam.

"Superiore porrò sæculo, insigniores harum inscriptionum fabricatores fuere Jovianus Pontanus, Pomponius Lætus, Joannes Camers, Cyriacus Anconitanus, ahique. ON THE SCIENCE

OF THE EGYPTIANS AND CHALDEANS. PART I.

— Jurat ire per alta
Astra.

Hor.

The more we study the writings of the ancient Greeks, the more we shall be convinced, that no people has surpassed them in taste or in genius, in the cultivation of the elegant arts, and in all the refinements of polished life. The creators of epic, lyric, and dramatic poetry, the most skilful orators, the most eloquent historians, and the most liberal, if not the most profound philosophers, they would still continue to command our admiration, even, if we could forget the wisdom of their political institutions, or cease to be dazzled by the splendour of their military achievements. While the history of literature exists, its most brilliant pages will probably ever be those, which record how a Homer sang, and how a Plato thought. But in awarding to the Greeks this ample portion of praise, let us not refuse to other nations the applause which is due to their industry, their learning, and their labours.

Upon what principle has it been, and is it still, that most modern writers, in treating of the origin and progress of the sciences, express themselves with contempt of the philosophical attainments of the ancient inhabitants of the East? Some imperfect acquaintance with geometry, mechanics, and astronomy, is indeed accorded to the Egyptians and the Chaldeans; but general opinion certainly estimates the scientific knowledge of those ancient nations as far inferior to that of the Greeks. He, who visits Athens, sees enough to be convinced, that he surveys in its ruins the remains of a splendid city; while the traveller, who wanders over the deserted site of Babylon, may be disposed to question the truth of some of those pompous descriptions, which have been vaguely given of the wealth and magnificence of the Assyrian capital. It is thus perhaps, that modern enquirers hesitate in assenting to the eulogies, which have been occasionally pronounced upon the learning and knowledge of the sages of Egypt and the East. The boasted edifice of Oriental wisdom has disappeared; and only a few remnants can be found to indicate its extent, or even to attest its exis tence.

Among the ancient philosophers of Europe, Pythagoras and his disciples seem, to have been better instructed than any others in the learning of the Orientalists. The system of physics, however, which they taught, was far from being generally adopted by the Greeks: and the information, which we possess concerning it, is extremely limited. Still we can scarcely doubt, that this system had its origin in the East; nor can we deny, that in many respects the opinions of the Samian philosopher are similar to those, which modern Europe has received as unquestionable truths. But while it is admitted, that the Oriental instructors of Pythagoras must have been acquainted with the true system of the material universe, it is contended, that their general conclusions were obtained rather by conjecture than by research, and were less the result of scientific enquiry than of hypothetical reasoning. The Chaldeaus and Egyptians, it is said, had not the means of becoming scientific astronomers: they had no instruments which can be compared with those of modern construction: they possessed no telescopes: with the higher parts of mathematics they were wholly unacquainted: they knew nothing of fluxions: they employed no calculus: they had scarcely acquired the elements of algebia. Let us remember, it may be added, that Thales was the first, who calculated an eclipse of the sun-that Pythagoras invented the problem concerning the square of the hypothenuse—that Hipparchus discovered the method of taking the parallax of a planet—and let us conclude, that before the Greeks very little progress indeed had been made in the exact sciences.

If these assertions could be proved to be indisputably true, the conclusions drawn from them would become irresistably triumphant. But how can we know, that these assertions are true? How can it be shown, that the Chaldeans and Egyptians did not employ instruments as well constructed as our own; that they possessed no telescopes; or that they were ignorant of the higher parts of mathematics? Had not Thales studied at Memphis, before he predicted an eclipse in Asia? Who does not see, that when Pythagoras uttered the farfamed εύρηκα, he meant to say, not that he had made a new discovery, but that he had found what he had lost, or, in other words, had remembered what he had forgotten? If no method had been known for taking the sun's parallax before the time of Hipparchus, how could Pythagoras, 400 years before, have estimated the diameter of the earth, when compared with that of the sun, as 1 to 42? It is probable, that the Samian sage must have made this conclusion from his own

observations, as we shall have reason to think presently, that his Oriental masters would have given him a far more exact result. (The real proportion is about as 1 to 112.)

Before I proceed farther, I wish to remark to my readers, that neither Pythagoras nor his immediate disciples appear to have left any writings behind them, sufficiently explanatory of their system to be understood by the uninitiated. Now it is of great importance to our present enquiry to observe, that those Greeks, who have transmitted to us the astronomical system, introduced into Europe by the Samian philosopher, evidently did not understand it, and were ignorant of the principles upon which it had been originally established by the sages of the East. Even the Pythagoreans, who did adopt this system. may be suspected of having generally taken it for granted upon the word of the Master. It is clear, that Aristarchus and Eratosthenes, for example, repeated by rote various scientific truths, which they could not have discovered, and must have been unable to demonstrate. Accordingly Hipparchus and Ptolemy, who were themselves practical astronomers, rejected those truths, which their predecessors had adopted upon report, and which their own limited science, and their want of instruments, did not enable them to prove.

But it may be asked, why, if the Orientalists possessed all this profound knowledge, might not the disciples of the school of Alexandria have studied among them the secrets of their philosophy? If the Egyptians and Chaldeans could teach the most abstruse and important truths to Pythagoras, and could unfold to him the system of nature and the universe, why should they have withheld the same information from men so illustrious as Hipparchus, Archimedes, and Ptolemy? I answer, that I am far from believing that the priests of Egypt and Chaldea instructed Pythagoras in all their knowledge. That philosopher had certainly not sounded all the depths of Oriental Thus the priests of Egypt do not appear to have communicated to him, as they did afterwards to Plato, the length of the solar year; but there is a reason which can be assigned for this, and which I shall presently state. In the mean time I would wish to remark, and it is a point to which I particularly desire to call the attention of the reader, that Pythagoras was the last philosopher of Greece, who visited Egypt and Chaldea, while the arts and sciences flourished in those countries. What the priests knew and taught in after times had been preserved by tradition. They were still acquainted with the length of the solar year in the time of Plato and Endoxus; and

they freely communicated their knowledge on this subject to those philosophers, because the law, which appears to have bound them to silence in the time of Pythagoras no longer existed. The priests of Egypt obliged their Kings to take an oath to preserve the established year of 365 days. (See Jablonski Panth. Ægypt.) Consequently there was a new thoth every fourth established year, while to preserve the true time, the priests themselves intercalated a day every fourth year. This then was one of their arcana, which during the Egyptian monarchy they were not likely to divulge to strangers. But when Plato visited Egypt, that country had no longer a King of its own. It had long been governed by the Kings of Persia; its laws had been changed, its temples profuned, and its priests degraded.

Pythagoras, however, seems to have obtained the knowledge of many truths from the Egyptians and Chaldeans, which could hardly have been preserved by those nations, even half a century after the death of that philosopher. The reason is sufficiently obvious. Pythagoras is said to have died at an advanced age, 497 years before Christ. He consequently visited Egypt and Chaldea in his youth, before the events happened of which I am about to speak. The Assyrian empire was subverted, and Babylon was taken, by the Persians under Cyrus, 538 years before our wra; and the conquest of Egypt was achieved by Cambyses, the son of Cyrus, 13 years after the subjection of Assyria. These events produced a mighty revolution in both countries. The Babylonians were plundered of their wealth: their laws were abrogated; and the whole form of their institutions, both public and private, was changed. (Herodot. l. i. and iii. Xenophon. Cyropæd. 1. vii. and viii. Dan. c. vii.) They rebelled against their tyrants; but their city was again taken by Darius Hystaspes, who diminished the height of its lofty walls, and put to death 3000 of its most eminent inhabitants. Xerxes, the son of Darius, carried away the golden statue of Belus, (Herodot. l. iii.) and destroyed the temple of that God. (Arrian. l. vii. Strabo, l. xvi.) In the mean time Egypt had not suffered less than Chaldea under the same terrible masters. Cambyses persecuted the priests, pillaged the temples, and burnt the idols. (Herodot. I. in.) Some abortive rebellions, which took place after the death of the tyrant, proved at once the sufferings and the weakness of the Egyptians.

From this statement it must be evident, that the sciences could no longer have been cultivated in Chaldea and in Egypt, even at the period when Herodotus visited those countries. It is known to every

that the priests alone were versant in the abstruse sciences; and that the Tepa, or sacred places, contained all their books, records, and instruments. Shall we believe then, that the ferocious Cambyses, and the despotic Xerxes, respected the sciences of those nations, whose religion they detested? When the former profaned the temples of Ptha and of the Cabiri, can it be imagined that his soldiers spared any of the objects, which the science or the curiosity of the Egyptians had collected? Can it be supposed, when the latter destroyed the tower of Belus, and murdered the priests, that the astronomical instruments of the Chaldeans, their clocks, quadrants, and armillary spheres, were not all comprehended in the rum of that magnificent observatory?

Thus, in following the authority of the Greeks themselves, we must admit that Pythagoras was the last philosopher of his nation, who visited Chaldea and Egypt, before those countries had experienced all the horrors of conquest and revolution. But it may be said, that my statement cannot be admitted; first, because the temple of Belus, in which the Chaldeans appear to have kept all their mathematical instruments, existed in the time of Herodotus, by whom it is fully described --secondly, because Cambyses, though he profaned the temples of Ptha and of the Cabiri, did not violate, as far as we can judge from the account of Herodotus, the sanctuaries of the other deities of Egypt—and thirdly, because the books of Thoth, or Hermes Trismegistus, were preserved for many ages after the death of Cambyses, whence it may be inferred, that the archives, the astronomical instruments, the keys to the hieroglyphical symbols, and all other objects appertaining to science and literature, were left untouched by that Prince.

1. In answer to the first of these objections I reply, that Herodotus has not described Babylon as it existed in his own time. His account of that city appears to have been taken from the reports and traditions which he had heard concerning it. Thus the walls could not have been 200 cubits in height and 50 in breadth in the time of Herodotus, since they had been reduced in height during the reign of Darius Hystaspes, who was dead before the historian was born. His account of the temple of Belus is by no means a clear one, and must have been taken from report, since according to Arrian and Strabo this temple was destroyed by Xerxes, and Herodotus did not visit Asia until after the death of that monarch.

- 2. It is not to be inferred from the silence of Herodotus, that when Cambyses violated the shrines of Ptha and of the Cahiri, he respected those of Amoun, Mendes, and Osiris. Memphis was not the only theatre of the destructive cruelty of the Persian conqueror. He burnt and pillaged the temples at Thebes, and persecuted the priests in every province of Egypt. (Diodor, Sicul. I. i. Strabo. I. x. and I. avii.) It is indeed evident, that the priests endeavoured to conceal, as much as they could, from Herodotus the disasters of their country, and the degradation of their own order. But that the calamities of Egypt were excessive may be certainly concluded from the positive testimony of the sacred writers. The prophets designated the Prince. whom the Greeks called Cambyses, by the merely titular name of Neouchadnezzar; and announced that he should lay waste with fire and sword the whole land of Egypt, which, according to the prediction of Ezekiel, was to be made "utterly waste and desolate, from the tower of Syene even unto the border of Cush;" (i. e. Arabia.) Nor was the season of Egyptian calamity of short duration. It continued for the space of forty years; and the prophets clearly intimate that Egypt was never to recover her former rank among nations. The same sacred writers allude distinctly to the destruction of the idols, and to the degradation of the priests, " the wise counsellors of Pharaoh."
- 3. Herodotus states, that the priests read to him a long list of the names of their kings; but he makes no mention, as far as I remember, of the books of Thoth. Plato flourished about sixty years after Herodotus. He says, that Thouth, as he writes the name, was the inventor of several sciences; but he is silent with respect to the existence of his books. In fact I am not aware, that any Greek writer has spoken of the existence of those books before Marfetho, who lived 150 years after Plato, and who pretended to have taken the materials of his history from the writings of Hermes Trismegistus. The value of Manetho's testimony may be estimated from his own statement, since, according to lamblichus, he had the effrontery to assert, that Hermes had written 36526 volumes! Clemens Alexandrinus, who flourished 450 years after Manetho, says that 42 books of Hermes were extant in his time. May we not, however, justly suspect, that the priests, as soon as they began to enjoy some repose after the persecution, which lasted for 40 years, endeavoured to supply the records which had been destroyed, and forged various writings under the name of Thoth? Manetho himself, according to Eusebius, was a highpriest (ἀρχιερενε) of the Egyptian idols; and it is not unlikely, that he

may have had his share in composing the 36526 books, which he attributed to the miraculous pen of Hermes Trismegistus. But we have direct evidence, that Cambyses did not spare the astronomical instruments of the Egyptians, for he not only pillaged the sacred enclosures, but carried away, as Diodorus attests, the golden circle of Osymandias. The same historian likewise states, that the Persian tyrant burnt all the temples at Thebes. It seems to me very improbable, under these circumstances, that the Egyptians could have preserved any of the monuments of their hierature, that could either be easily removed, or easily destroyed.

Since then neither Thales nor Pythagoras left helind them any written accounts of what they had seen in Egypt and the East; since no Greek traveller, after their age, could have visited those countries. while the arts and sciences continued to flourish there; and since it appears nearly certain, that the Persian conquerors did not spare the books and instruments of the mathematicians, when they pillaged the temples, and burnt the images of the idolators; I know not how it can be argued from the testimony of the Greeks, that the ancient Chaldeans and Egyptians had no instruments fit for the nicer operations of science. I can say nothing of the accuracy of the golden circle of Osymandias, or of the armillary spheres, which the Greeks, after their manner, fabled to have been constructed by the giant Atlas. and by the centaur Chiron. But I cannot doubt that, from very remote antiquity, the Egyptians had cultivated the sciences. Their anighty works still attest this truth. Who shall name the distant age, when the pyramids were built? Yet the powers of machinery must have been well understood by the people, who conveyed such massive stones from the quarries in the hills, and piled them one above another in the valleys. The architect, who planned the great pyramid. must have known how to take a mermian. Nor is this all; he must have been well skilled in astronomy, But I reserve the discussion of this subject for another opportunity,

We hear it loudly urged, that as the ancients were not acquainted with the use of the telescope, it is vain to compare them as astronomers with the moderns. The telescope is said to have been invented in the beginning of the 17th century; and Galileo is affirmed to have been the first astronomer, who employed in the service of science this mighty engine of knowledge. But it is impossible for us, at the present day, to prove that no telescopes were employed by the ancient Egyptians and Chaldeans, before their temples, which were also their observatories, were pillaged or destroyed by the Persians. For my

own part I cannot doubt that the art of constructing telescopes was known to the philosophers of those countries; but this art, with many others, was in great measure, though, I think, not entirely, lost, after the terrible reigns of Cambyses and Xerxes. All the learning of the East was confined to one class of men; and the persecution of the Persians was chiefly directed against that class. Cambyses offended without injuring superstition, when he wounded the sacred bull; but he gave a mortal blow to Egyptian science, when he compelled the priests to abandon their literary pursuits, by burning and pillaging the edifices consecrated to learning and religion. Neither could the conduct of Xerxes have produced any other effect in Chaldea, when he destroyed, according to Arrian, not only the temple itself (rôv vewr) c. Belus, but the other sacred places (τὰ άλλα ἰερά) of the Babylonians; for by these other sacred places I understand the historian to mean the colleges, seminaries, and buildings inhabited by the priests, all of which were contained within the sacred precincts.

But let us now enquire, whether the ancients employed mirrors and telescopes in surveying the heavens, or whether the use of the telescope remained unknown until the 17th century.

The Greeks, as Plutarch attests, employed metallic mirrors, either plane, or convex, or concave, according to the uses for which they were intended. Every one has heard of the burning mirrors constructed by Archimedes. The Persian writers have preserved many curious traditions of the mirror of Alexander, (Ayinah Iskandri) in which they say, that the universe was represented. But it is certain from a passage in Aristotle, (Meteorolog. l. i. c. 8.) that the ancients employed mirrors in surveying the celestial appearances. Now this fact furnishes a strong presumptive proof of the use of magnifying glasses. M. Bailly, who denies that the Greek astronomers were acquainted with the use of the telescope, admits that they employed alidades in observing the stars. To these instruments tubes were affixed, though perhaps at first this might not have been the case. Now the question is, whether, or not, ' uses were ever placed in these tubes. of glass was known from remote antiquity. Mention is made of glass in the book of Job, where it is called זכוכית. The Phænicians, Egyptians, and Babylonians, knew not only the art of casting glass, but of colouring it. Bits of glass of different colors are still found upon the mummies. The cups, which Adrian sent from Egypt to Rome, were apparently of glass coloured in imitation of the opal. (Vopiscus.) In more ancient times the Tyrians and Babylonians constructed columns of glass, and gave a green tint of so much lustre to these

columns, that strangers mistook them, though many cubits in height, for single emeralds. (Herodot l. ii. Theophrast de lapid.) Glass was so common in Ethiopia, that according to Herodotus, coffins for the dead were frequently made of it. The Greeks knew how to melt and cast glass, for Plutarch mentions heath as the best kind of fuel to be employed for that purpose. Suidas, at the word δαλος, in explaining a passage in Aristophanes, indicates that burning mirrors were occasionally made of glass. The Greeks appear to have imitated precious stones in coloured crystals. (Plin. l. xxxvi. Theophrast. de lapid.) The Romans worked in glass with admirable skill; and in such abundance was glass at Rome, that it may be doubted whether any palace in Europe contain half as much glass as was exhibited in the theatre erected by Scaurus. The manner, in which the Romans coloured glass, has not been equalled by modern ingenuity. (Winkelman Hist. de l'art.) Seneca seems to exaggerate the proficiency made in working glass, and in imitating gems, during his own age. (Epist. 90.) The Romans might have improved in the art; but the mannfacture of glass had been carried to high perfection by more ancient nations, as I have already shown. But if the ancients could do so much with glass, and possessed it in such abundance, they could scarcely have been ignorant of its magnifying powers. That the Romans must have known the magnifying powers of glass, may, I think, be concluded from the sense in which Seneca uses the word specularia. If the astronomers did not place lenses in the tubes of their alidades, how are we to understand Strabo, when he says, that vapours produce the same effects as the tubes in magnifying the objects of vision by refraction? (l. iii. c. 138.) This at least seems to me the sense of the passage. The language of Geminus (Uranolog. 10.) is not less remarkable, as cited by Bailly-præterea etiam per dioptra omnes stellæ spectatæ videntur circularem motum in tota circumductione dioptrorum. The Romans were accustomed to survey minute objects through a glass bottle filled with water. (Sen. Quæst. Natur.) This was to know the powers of the microscope; and if the microscope were known, so probably was the telescope. Neither does the use of the telescope seem to have been lost in later times. About the end of the 12th century Averroes observed the transit of Mercury over the sun's disk, a task scarcely to be accomplished without the aid of a coloured magnifying glass. Towards the end of the 13th cen tury flourished our countryman Roger Bacon. This extraordinary person asserted, that by means of glasses the sun and moon might be brought down to the carth; and he likewise said that Caesar surveyed

the coast of Britain from that of Gaul, by the help of a glass; and this account, whether true or false, proves its author to have been acquainted with the use of the telescope.

My readers will now perhaps be more disposed to bear with me, when I express my belief, that telescopes were constructed in very remote ages by the Egyptians and Chaldeans. The Greeks reported that Pythagoras showed letters written on the disk of the moon by means of a mirror. How easily may this wonderful tale be explained, by supposing, that Pythagoras showed to his countrymen the inequalities on the surface of the lunar orb, through a telescope, which he had brought with him from Memphis or Babylon! It is mentioned by Diodorus Siculus, that the Hyperboreans had a tradition of mountairs having been seen in the moon. Some stranger, having a telescope, may have wandered into those regions; and as barbarians are always more impressed by the phanomena of nature, than polished nations, it is not surprising that the remembrance of this spectacle, so astonishing to ignorant men, had not been lost even in the lapse of ages. Pliny states (l. ii.) that 1600 stars might be counted in the 72 constellations. He must have had this from Oriental tradition; for by the 72 constellations can only be understood the 72 parts into. which the Orientalists divided the zodiac. But, according to Ptolemy, only 1022 (or 1026) stars can be discerned by the eye in the whole visible heavens. The Orientalists therefore must have employed magnifying glasses of great power, to have counted 1600 stars in the zodiac alone. In Flamstead's catalogue for the whole heavens, the number of stars counted amounts to no more than 3000; and I behere it has only been within the last 30 years, that this catalogue has been augmented. The celebrated Democritus asserted, that the galaxy is composed of a multitude of small stars. (Plutarch, de placit, philosophor.) It is only the telescope that could have divulged this secret of nature; and as Democritus had no means of making such a discovery himself, we may conclude that he had heard the fact stated in the East, where the memory of such an observation might have been still preserved. (430 years B. C.) It is still more remarkable, that the Persians, who could no more have made the discovery than the Greek philosopher, have made the same statement. Hyde, in his notes to the tables of Uleg Beig, cites a passage from the Nimetullah, in which it is said, that the galaxy appears white from the great multitude of stars which it contains. Now the Persians could not possibly have known this truth from observation. They could only have had it from tradition. Democritus affirmed that the whole number of the

planets was not known to the Greeks. This he must likewise have heard at Memphis or Babylon. Indeed the Chaldeans still held in the time of Apollonius of Pamphylia, (240 years B. C.) that more planets had been discovered than were generally known. (Seneo. Quæst. Nat.) The followers of Buddha in India have an ancient tradition, that there is a planet, (I think they call it Rayu) the orbit of which is beyond the orbit of Saturn. Some of the ancient Bramius held the number of planets to be fifteen; and they consequently reckoned one more than the Europeans did, before Cassini, in the year 1684, had discovered the two interior satellites of Saturn.

I now leave it to my readers to decide, whether I be right or wrong, in concluding, that the use of the telescope must have been known from remote antiquity. Let us proceed to other considerations. We are told that the Egyptians were ignorant of the higher branches of mathematics. Yet when Plato reproved the mathematicians of his own age and country, for degrading their science by making it too material, it would seem that he must have heard in Egypt of some higher parts of mathematics than were cultivated by Eudoxus and Archytas. Plato's idea of this science must have been exalted indeed, and more so than his own knowledge of it could justify, when he said that God is always excreising geometry. From these circumstances I am induced to think that some traditions, some remnants of profound mathematical learning, had given Plato reason to believe, that the Egyptians had once gone far beyond the elementary parts of the science.

But we are likewise told that the Egyptians scarcely knew the elements of algebra. How can we be sure of this? If all their books, and the keys to their hieroglyphical symbols, were destroyed during the 40 years' persecution, as there is good reason to believe, how can we conclude that they knew not the use of algebra as completely as our modern mathematicians? It would be utterly unjust to decide the question from the specimens given by a Greek of the Alexandrian school, who wrote when science was nearly extinct among the native Egyptians, and who may have ill understood the ancient algebraical formulæ.

With respect to fluxions, the differential calculus, and logarithms, it is equally impossible to say, whether the ancient Egyptians were acquainted with them or not. One of the writers of the Asiatic Researches gives us reason to suppose, that the Bramins employed the differential calculus, and were acquainted with the binomial theorem. But in spite of all that has been said of the antiquity of Indian science,

I am still of opinion that it was all obtained, and imperfectly obe tained, from the Chaldeans and Egyptians.

I am aware that I have trespassed beyond the usual bounds on the patience of my readers. I shall therefore compress my matter as much as possible, while I examine what remains to us of the astronomical knowledge of the ancient Egyptians and Chaldeans. If we find among these remnants various statements, which laborious investigation has demonstrated in later times to be consistent with fact, how shall we be justified in supposing that men, at one period rather than at another, have discovered the laws of nature without research, have found out the truth by guess, and have arrived at right conclusions by wrong inductions?

In considering then the fragments of this very ancient system of astronomy, the cycles first strike us with astonishment. The cycle of 19 years, the invention of which has been claimed for Meton by his countrymen, was known in the East for many centuries before he existed. (Bailly Hist. de l'Astron.) I conceive that the cycle of 60 years, which was thence called the sosos by the Chaldeans, was instituted to mark the periods of the planet Jupiter, and accordingly the Bramins denominated it the cycle of Vrihaspati. (Asiat. Research.) 60 of our years make, in round numbers, 5 years of Jupiter; and the planet setting out from Arics, at the beginning of the period, will be found in the same sign at its conclusion. According to Josephus, the Neros, consisting of 600 years, was established by the Antediluvians. Cassini shows that its inventors calculated the lunar month right to a second, but that they estimated the diurnal period at 24h. 51' 36". which is nearly 3' too long. If, however, the priests of Amoun were right, the Antediluvians may have been so likewise, for Plutarch tells us, that according to the former the annual period has been contimually decreasing. In a former paper I have shown that the Egyptians knew the great period, in which the pole of the equator turns round the pole of the ecliptic. My readers may consult what M. Bailly has said concerning the two Oriental periods of 144 and of 180 years, and which multiplied into each other give 25,920 years, the exact period of the great cycle. M. Bailly tells us that the Indians call the period of 180 years van. He would have found his argument strengthenest had be been aware that van, or vahan, signifies vehicle. Thus the period called van was not to be considered alone. It was the vehicle of another number, and that number being 144, and being multiplied by it, gives the number of years, in which the stars apparently make a complete revolution.

The Pythagoreans, who had derived all their knowledge from the East, held, according to Plutarch, (in vita Numæ) that the fire, (i. e. the sun) occupies the centre of the universe; that the earth is carried by a circular motion round the central fire; and that it is far from forming a principal part in the mundane system. "The Pythagoreans say, that the fire is in the middle, and that the earth is one of the stars, being carried round the centre, and thus producing night and day." (Aristot. de Cœlo. l. ii.) "Philolaus, the Pythagorean, held that the earth moves round the sun in an oblique circle." (Plutarch de placit. philosophor.)

In the doctrines of the Pythagoreans we can distinctly trace their knowledge of the laws of attraction and repulsion, and of the continucd action of the centripetal and centrifugal forces. It also appears to me, that gravitation must have formed the great pillar of the Pythagorean system. I think so, because several of the Greek philosophers. as is evident from Plutarch, were aware of the tendency of all material particles to a common centre. But my chief reason for thinking so is, because Aristotle combats the Pythagorean system; as being inconsistent with the laws of gravitation. "The mass of the earth." says he, "must be heavier than the mass of the fire, and therefore the carth, and not the fire, ought to occupy the centre of the universe." He therefore seems to attack the system, as being contrary to the very principles upon which it was established. Has Aristotle's argument been answered yet? I can have no doubt that the sun is in the centre of our universe; and yet it can hardly be denied that the specific gravity of our globe must be greater than that of a globe of fire, though that may be greater by a million times than the earth.

But this Pythagorean system had its origin in Egypt and the East. Who but the Chaldeans and Egyptians taught the Greeks to calculate eclipses? According to Diogenes Lacrtius the Egyptians had already observed, before the time of Alexander, 373 eclipses of the sun, and 832 of the moon. From the same sources the Greeks must have obtained their notions of a plurality of worlds. (Plutarch. decess. Orac.) Aristotle says, (Meteorolog. l. i.) "that the Pythagoreans held a comet to be one of the planets, which appears after a long interval of time, and which, at the apex of its very elliptical orbit, is at as small a distance from the sun as the planet Mercury." This seems to me to be the sense of the passage. Now the Chaldeans held comets to be planets: (Senec. quæst. Nat.) and the Egyptians predicted their returns. (Diodor. l. i.) The Greeks have stated with tolerable exactness, though in round numbers, the annual periods of the planets.

(Plut. de placit. philosophor.) But they had probably obtained their information concerning the planetary system from the Egyptians, who 'had already explained, (the most difficult part of that system,) the motions of the planets Mercury and Venus. (Macrob. in somn. Scipion. 1. i.) From what sources, unless from Oriental traditions, could the Greeks have derived their knowledge, when they taught that the moon's diameter is about a third of the earth's? (this computation makes the moon's diameter too great, but still it is true that the moon's diameter is greater than a fourth of the earth's:)—that the moon's mass is to that of the earth as 1 to 72? (this is within one of Bernouilli's calculation;) and that the diameter of the sun is equal to the 725th part of his orbit? Where but at Memphis, or at Babylon, could Pythagoras, or Democritus, have learned that the moon might be a habitable world like our own; and that its surface like that of the earth is diversified with mountains, valleys, and seas? (Plutarch. de facie in orbe lunæ, Stob. l. i.) Empedocles must have heard it as the opinion of those who had tried to take the parallax of the fixed stars, that their distances are incalculable. Aristarchus taught that the earth turns round its own axis, and moves in the oblique circle of the zodiac, while the heavens are at rest. This was much; but he also affirmed that the sun was one of the fixed stars. I may be told that these were all guesses; but it could scarcely have been guess-work. when the same Aristarchus declared the distance of the moon from the earth to be equal to 56 demi-diameters of the earth—that is, 220,360 English miles. The real distance is 240,000 English miles. Now as Aristarchus could not have made this calculation himself, (for he could not take the parallax of a planet, as Hipparchus did after him,) he must have had it from Oriental tradition. We learn from Seneca, that Artemidorus asserted that innuncerable planets, invisible to man, wander through the boundless regions of space. But Artemidorus, who was a poor astronomer himself, must have heard this as the opinion of men, who believed from analogical reasoning, that other earths turn round other suns—and these men could scarcely have been found among his own contemporaries. (100 y. B. C.) But the most extraordinary statement made by any ancient astronomer, was that of Eratosthenes, (Plutarch de placit. philosophor. l. ii. c. 31. Xylander's edition) who said that the sun is 804,000,000 stadia from the earth. M. Bailly computes this distance to be equal to 202,000 demi-diameters of the earth. In English miles this will amount to 79,487,000, which was nearly the distance determined by Cassini, 81,000,000.

But it seems to me, that M. Bailly has made the stadium here much too short. In the next part of this Essay, I shall explain myself fully

concerning the stadium, and its rates of measure. In the mean time I shall merely observe, that there is no reason for thinking, that Eratosthenes meant any other stadium in this calculation, than the stadium of 600 Greek feet, commonly named the Olympic stadium. I think it right however to remark, that the length of this stadium is inaccurately given in all the treatises on itinerary measures which I have seen, because it has not been considered that there was a long Greek foot, which exceeded the English by almost half an inch; and which ought not to be confounded with that which is said to bear to the English foot the proportion of 1007 to 1000. It can be shown that this long foot was that which was reckoned to the Olympic stadium, which I hold to have been about 624? English feet in length. If then we reckon by this studium, we shall find the calculation, probably reduced by Eratosthenes to the Greek standard, from Chaldean or Egyptian measures, very surprising. Modern astronomers compute the distance of the earth from the sun at 95,173,000 English miles. The computation of Eratosthenes gives the distance at about 95,193,000 English miles. It is clear, that this statement could not have been founded on conjecture; and while it affords an astonishing proof of astronomical skill, we cannot doubt, that Eratosthenes reported it on the authority of Oriental tradition. I must yet request the attention of my readers to another most extraordinary statement. I mean the measure of the earth's circumference, as reported by Aristotle to bave been made by the mathematicians. (De Coolo I. ii.) This measure is given at 400,000 stadia. M. Bailly has written at great length upon this subject; and though by a different process I have come to the same conclusion with that ingenious writer, I am aware, that the existence of a stadium of 51½ toises, equal to about 330 short Greek feet, has been disputed. My reasons for admitting it will be stated in my next communication; in which I shall endeavour to show, that there existed in Egypt and the East an itinerary measure precisely of the length which I have mentioned. Aristotle says, that the circumference of the earth was stated at 400,000 stadia. Now what mathematicians did Aristotle mean? Surely not those of Greece. In the time of Aristotle the mathematicians of Greece were incapable of making any calculation concerning the earth's circumference; but Aristotle, who was informed of the state of the sciences at Babylon by Calisthenes, and probably by other Greeks who accompanied Alexander, might very well have known the traditions preserved on this subject by the Chaldeans. Now the short stadium of 330 feet was, as I shall show, a Chaldean measure; and for reasons, which I have not now time to adduce, I calculate this stadium at 350 short Greek feet. My

160 Remarks on the Dæmon of Socrates.

opinion is, that the excess of this small foot above the English foot was even less than Mr. Greaves has made it. That writer rates the excess at about the 143rd part of a foot. My calculation makes this excess still less. - the 658th part and a fraction of a foot. Now if the small stadium consisted of 330 small Greek feet of the dimensions which I have calculated, the result will be found very remarkable. The circumference of the earth is determined at 25,038 English miles. or at 132,200,610 English feet. If we reckon the small stadium at 330 small Greck feet, then 400,000 stadia will be equal 132,000,000 of these Greek feet. Were these Greek feet precisely of the same measure with as many English feet, the whole would amount to precisely 25,000 English miles; but I have stated this small Greek foot to be longer than the English by the 658th part and a fraction of a foot. This may appear a very trifling difference; and yet in the circumference of the earth it will amount to 200,640 English feet or 38 English miles; and thus will 132,000,000 of these Greek feet," be precisely equal 132,200,640 English feet; and 400,000 Chaldean stadia will be equal to 25,038 English miles, the exact measure of the earth's circumference. I now leave the subject for the present, and regret that I have detained my readers so long; though I have endcavoured to be as concise as possible.

Paris, July 1817.

W. DRUMMOND.

REMARKS ON THE DÆMON OF SOCRATES.

As the dogmas of the ancient philosophers have been but little understood since the abolition of their schools, they have been for the most part grossly perverted, or ignorantly opposed. We have an egregious instance of this in what is transmitted to us by Plato and Xenophon respecting the celebrated damon of Socrates, of which the general opinion has been, that it was the prudeuce, foresight, or conscience of Socrates, unaccompanied with any supernatural agency. The following testimonies, however, from Plato will, I doubt not, convince the intelligent reader that Socrates firmly believed he was under the immediate protection of a power, superior to man, but inferior to God; that this power was a dæmon, or in modern language a guardian angel; and that it was not merely, as Mr. Nares asserts, a voice, but that it was the voice of a damon.

In the first place, it is requisite to observe of the adjective dampinos, that though it frequently signifies divine, yet its primary signification is damoniacal. Hence it is usual with all the disciples of Plato to call their master being divine, and Aristotle dampérines, taking occasion thus to denominate the latter from what Plato said of him, that he was dame of of nature, from his uncommon knowledge in every branch of physiology.

In the second place, that every man has a dæmon who attends him while living, and conducts him to his judges when he dies, is expressly asserted by Socrates in the Phædo: λέγεται δὲ οὖτως, ὡς ἄρα τελευτήσαντα ἔκαστον, ὁ ἐκάστου δαίμων ὅπερ ζῶντα εἰλήχει, οὖτος ἄγειν ἐπιχειρεῖ εἰς δή τινα τόπον, κ. λ.

In the third place, δαιμόνιον in Plato, is not, as Mr. Nares supposes, always an adjective supported by τ_i , as is evident from the following instances from the Theages and Theatetus: ** \(\text{heages} \) is the stances from the Theages and Theatetus: σου μεταξύ γέγονέ μοι ή φωνή ή τοῦ δαιμονίου.— ένίοις μέν το γιγνόμενόν μοι δαιμόνιον ἀποχωλύει συνείναι, ένίοις δε έα. From the former of these extracts also, it is evident that the daipportor of Socrates was not merely a voice, but the voice of a dæmon. For as there is a substantive δαιμόνιον, this word, when unaccompanied with τι, and particularly when preceded by the article to, is doubtless to be considered as a substantive. But as Socrates also calls this 70 δαιμόνιον, a God, in consequence of being, as Proclus observes, a dæmon of the highest order, it is indubitably certain that this word is used by him in the above passages as a substantive. He calls it a God, however, in the first Alcibiades: διὸ δή καὶ πάλαι οἶμαί με τον θεον ούχ έαν διαλέγεσθαί σοι, ον έγω περιεμένον οπηνίκα έάσει. And also in the Theætetus: τὸ δὲ αίτιον τούτου τόδε μαιεύεσθαί με ό θεὸς ἀναγκάζει, γέγγαν δὲ ἀπεκώλυσεν.—τῆς μέντοι μαιείας ὁ θεός το καὶ ἐγοὶ αἴτιος.

It would be in vain to observe to Mr. Nares, that the greater part, and the best of the disciples of Plato, agree with Mr. Heber, that "Socrates was attended by one of those beings superior to man, whom, under the name of demon, they were accustomed from their infancy to fear, propitiate, and adore." For he says, "What others have made of δαιμόνιον is of no consequence." As if the opinion of men was of no consequence, with whom the Greek language was their native tongue; who made the study of NO. XXXI. Cl. Jl. VOL. XVI.

the philosophy of Plato the business of their lives; and who had books to consult, written by his immediate disciples, which since their time have been irrecoverably lost. Or as if the decision of Dr. Ehfield, Dr. Hay, Bishop Horsley, Mr. Mitford, and Schweighæuser, on this subject, was of greater authority than that of Plutarch, Apuleius, and Proclus.

To other learned readers, indeed, it will most clearly appear from the Apology of Socrates, written by Plato, that Socrates was accused of implety, and of making innovations in the religion of his country, for asserting that he was connected in a very transcendent degree with a presiding damon, to whose direction he confidently submitted the conduct of his life. For the accusation of Melitins, that he introduced other novel damoniacal natures, (καινά δαιμόνια), can admit of no other construction. This is evident from what is said by Xenophon, whose testimony on this, point is no less weighty than decisive: " I have often wondered," says that historian and philosopher, "by what arguments the Athenians, who condemned Sociates, persuaded the city that he was worthy For, in the first place, how could they prove that he did not believe in the Gods in which the city believed? since it was evident that he often sacrificed at home, and often on the common altars of the city. It was also not unapparent that he employed divination. For a report was circulated that signals were given to Socrates, according to his own assertion, by a dæmoniacal power; whence they especially appear to me to have accused him of introducing new dæmoniacal natures. He, however, introduced nothing new, nor any thing different from the opinion of those who, believing in divination, make use of auguries and oracles, symbols and sacrifices. For these do not apprehend that either birds, or things which occur, know what is advantageous to the diviners; but they are of opinion that the Gods thus signify to them what is beneficial; and he also thought the same." Πολλάκις εθαύμασα, είσι ποτε λόγοις Αθηναίους επεισαν οι γραψάμενοι Σωκράτην, ως άξιος είη θανάτωυ τη πόλει.—πρώτον μέν ουν ως ουκ ἐνόμιζεν οῦς ἡ πόλις νομίζει θεοὺς, ποίω ποτ' ἐχρήσαντο τεκμηρίω; θύων τε γάρ φανερός ην πολλάκις μέν οίκοι, πολλάκις δε έπὶ τῶν κοινῶν τῆς πόλεως βωμών και μαντική χρώμενος ούκ άφανής ήν διετεθρύλλητο γάρ, ώς φαίη Σωκράτης το δαιμόνιον έαυτῷ σημαίνειν, όθεν δί και μάλιστά μοι δοχοῦσιν αὐτὸν αἰτιάσασθαι, χαινὰ δαιμόνια εἰσφέρειν ὁ δ' οὐδὲν καινόμενον εἰσέφερε τῶν ἄλλων, οσοι μαντικὴν νομίζοντες, οἰωνοῖς τε χρῶνται, καὶ φήμαις, καὶ συμβόλοις, καὶ θυσίαις οὐτοὶ τε γὰρ ὑπολαμβάνουσιν, οὐ τοὺς ὁρνιθας, οὐδὲ τοὺς ἀπαντῶντας, εἰδέναι τὰ συμφέθοντα τοῖς μαντευομένοις, ἀλλὰ τοὺς θεοὺς διὰ τούτων αὐτὰ σημαίνειν κάκεῖνος οὐτῶς ἐνόμιζεν. And in another place he observes, "That it was evident that Socrates worshipped the Gods the most of all men." Φανερὸς ἡν θεραπεύων τοὺς θεοὺς, μάλιστα τῶν ἄλλων ἀνθρώπων.

Conformably to this, in his Apology written by Plato, he clearly says, that the doctrine of Anaxagoras, which made the sun and moon to be no Gods, is absurd. And in another part of it: "I believe that there are Gods more than any one of my accusers." καὶ ἀτέχνως ἀπολογούμενος κατηγοροίην ἀν ἐμαυτοῦ, ὡς θεοὺς οὐ νομίζω ἀλλὰ πολλοῦ δεὶ οῦτως ἔχειν νομίζω τε γάρ, ὧ ἄνδρες 'Αθηναῖοι, ὡς οὐδεὶς τῶν ἐμῶν κατηγορῶν.

If Socrates therefore was a believer in the religion of his country, as he most unquestionably was, he believed that he was attended by a friendly dæmon; and this being one of the most evalted kind, he not only calls it τὸ δαιμόνιον, but also θεός. For agreeably to the theology of the Greeks, as the summit of an inferior coalesces with the extremity of a proximately inferior order, the highest dæmon is κατὰ σχέσιν, through habitude or alliance, a God.

I had almost forgot to observe that this voice, which Socrates heard, is called by him in the Apology a prophetic voice, ή γλη εἰωθυῖά μοι μαντική, ή τοῦ δαιμονίου. And prophecy, according to Plato, is under the immediate superintendence of dæmons, as is evident from the speech of Diotima in the Banquet.

After such unequivocal testimony, no other reason can be assigned for the position of the moderns, that Socrates ridiculed the religion of his country, than inattention to one of the most important tenets of ancient theology, and which may also be considered as ranking among the first of the most magnificent, scientific, and divine conceptions of the human mind. The tenet I allude to is, that the essential, which is the most perfect energy of deity, is deific; and that his first and immediate progeny must as necessarily be Gods, that is, beings transcendently similar to himself, and possessing those characteristics secondarily which he possesses primarily, as heat is the immediate offspring of fire,

164 Stanleii Notæ quadam in Callimachum.

and coldness of snow. Unacquainted with this mighty truth, which is coeval with the universe itself, modern theologists and sophists have defamed what they did not understand, and by offering violence to the pages of venerable antiquity, have made the great Socrates himself become the patron of their own distorted conceptions.

Johanni Marsham,

Armigero, &c.

They are much intermingled with additional remarks by Bowyer, into whose possession they seem to have passed; and here and there I have presumed, very slightly, to play the commentator myself. As, from my sequestered situation, I have no easy means of ascertaining whether or not the aumotations of S. and B. have been already communicated, in some shape or other, to the public, I trust I shall be forgiven, even if I should appear to students more fortunately circumstanced in that particular, to have "found a mare's nest." Yours very truly,

Hunmanby, June 23, 1817.

F. WRANGHAM.

N. B. I only insert occasionally the Bowyer additions, of which the Greek passages (I may add) are, contrary to those of Stanley, generally accented.

CAMBRIDGE PRIZE POEMS.

JERUSALEM.

My Spirit some transporting Cherub-feels
To bear me where the tobers of Salem stood,
Once glorious towers, now sunk

Milion's Ode on the Passion.

Reballions Judah still her God detied:
Then do Isa:ah's eye prophetic rose
The lengthen'd vision of her future woes;

Then, with his country's fearful fate imprest,
The sacred fervour labouring in his breast,
Against the guilty race his kindling lyre
Breathed the deep vengeance of th' Almighty's ire.

"Hear, 'O ye Heav'ns, and thou, O Earth, give ear, And trembling shrink the awful sounds to hear! The Lord—the Lord hath spoken from on high, Whose voice is fate, whose will is destiny. See 'from afar the dread avengers come, Fierce as despair, insatiate as the tomb. Heard ye their wheels, like whirlwinds, sweep around? Heard ye their thundering coursers beat the ground? Mark'd ye their spears move on in long array, And shield on shield flash back the beam of day? O'er 'Salem's walls Destruction sternly low'rs, And frowns dark horror on her destin'd towers. Bow'd to the dust, 'she mourns her slaughter'd band's, And strives in vain to lift her fetter'd hands."

O greatly-fall'n, how humbled is thy state! Thy fields how bare, thy courts how desolate! Where Joy was wont the nightly dance to lead, Shrieks the lone bat, and hungry vultures feed; There the fierce dragon finds a place of rest, And boding screech-owls build their secret nest. No more, Bethesda, o'er thy desert springs Descending Seraphs wave their healing wings; No more sweet sounds, at morn, or eve, declare That hosts angelic hover on the air: All—all is fled; and Desolation reigns, Without a rival, o'er thy ravaged plains.

O days divine, of you may mortal sing, When God himself was Israel's Guard and King? Will not the eloquence of earthly speech Fail from a height, which fancy scarce can reach? To know Creation's Monarch ever nigh, A staff in sorrow, and a friend in joy; To see Heav'n's glories visibly displayed, And all its Seraphim in light arrayed; These were thy rights, O'Israel, this thy boast, These the high joys, thy disobedience lost.

Bear witness, Hermon, thou, whose dewy sod Has felt the footstep of a present God;

Isai. i. 2.
 Id. xxix. 3.

² Id. v. 26. &c. and xxi>

⁴ Id. 4th verse.

And, Carmel, thou, whose gales, with incense fraught, The murmurs of a voice divine have caught; What dreams extatic o'er the vot'ry stole, How swell'd the pious transport in his soul! E'en now, when o'er your long-forsaken sweets The Pilgrin lingers, in your loved retreats, Steal visionary forms along the vale, And more than music whispers on the gale.

O had I pinions, " fleet as those that bear
The dove exulting thro' the realms of air,
Then would I visit every holy shade,
Where Saints have knelt, or Prophets musing stray'd;
Bend with a sigh o'er every relic near,
And pay each shrine the tribute of a tear.

Where o'er the waste, in rnde disorder thrown, Neglected lie yon crumbling heaps of stone, O who (sad change!) the blest abode could tell, Where God's own glory once vouchsafed to dwell? Yet from the ruins Fancy still can raise Th' unperial structure, bright beneath her rays; Swift to the view its scatter'd wealth restore, And bid its vanish'd splendors beam once more. Ev'n as I gaze, 2 the sudden spires ascend, With graceful sweep the long-row'd arches bend; Aspiring shafts the heaving doine sustam, And all the fabric grows along the plain. See, as it rises, see the world combine Its various gifts to deck the work divine: Nature no more her secret treasures hides, The mine uncloses, and the deep divides. Mild o'er the wave the fav'ring breezes play, And waft the Tyrian purple on its way. Her purest marble rocky Paros lends, Her sweetest odours soft Idumé blends; On Carmel's heights the stately cedar falls, And Ophir sparkles on the polish'd walls. See, while the slow-expanding gates unclose, How bright within the boundless lustre glows! Here the tall palm for ever lives in gold, There sculptur'd flowers their fretted leaves unfold; While ever-burning lamps depend from high, Countless as stars, that throng the midnight sky.

Psalm 1. 5.

^{2 1} Kings, ch. vi. passim-

But far within retires the dread abode, Jehovah's throne—the Oracle of God; Two cherubs there, with minic glories bright, 'High o'er the Ark their guardian wings unite.

Thine were these mighty works, by thee design'd, Belov'd of God, and wisest of mankind. What to thy Sire the will of Heav'n denied, To thee it gave, propitious, to provide. Yet, while thy temple in the dust decays, Lives the full splendor of his sacred lays. O skill'd to strike the many-sounding lyre, With all a Prophet's—all a Poet's fire, What breast, that does not kindle at thy strain? What heart, that melts not, when thy strings complain? Hark, how the notes in mournful cadence sigh, Soft as the breeze, that only wakes to die. Changed is their tone; th' impetuous measures sweep, Like the fierce storm conflicting with the deep. Now all th' angelic bost at once combine Their golden harps in unison with thine. Extatic fervors seize the trembling soul, And Hallelmahs ring from pole to pole.

What 2 fearful omens heralded the hour,
That gave Judæa to a tyrent's power!
As sank the sun, aimd the western blaze
Terrific visions burst upon the gaze.
Unearthly spears reflect the setting beam,
Swords wave, behns glitter, hostile standards stream;
And thronging chariots, hurrying swiftly by,
Sweep the wide air, 'till darkness veils the sky.
Nor ceased the portents then: a lund light
Shot a fierce splendor from the clouds of night;
Its own san hue o'er all the temple spread,
And on each fear-struck face a ghastlier paleness shed.

See! see! untouch'd by any human hand,
The temple's gates—her massy gates—expand!
No earthly sound is that within I hear,
As waters bursting on the deafen'd ear,
Proclaiming, as its awfor thunders swell,
"The Lord no more in Israel deigns to dwell:"
No mortal foot th' affrighted threshold trod—
"Tis God's own voice, the parting step of God!

¹ 2 Sam. vii. 4. ² Josephi Hist. and Tacit lib. v. c. 13.

Yes, thou art now abandon'd to thy fate;
Vain is regret, repentance comes too late.
Already onward rush thy angry foes,
Already thy devoted walls'enclose:
Death with pleased eye pursues their destined way,
And grim Destruction leads them to their prey.

Darker, and darker still thy doom appears,
And Sorrow's face a blacker aspect wears.
In vain with equal hand does Justice deal
To each the stinted, and unjoyous meal;
With looks despairing, as they ask for food,
Breaks one shill shriek from all the multitude:
No more remains to fan life's feeble fires,
And Hope's last throb just flutters, and expires.
Ev'n the fond mother, seized with madness wild,
While in her arms th' unconscious infant smiled,
Drove to its heart the unrelenting steel,
And quench'd her fury on th' accursed meal.

Annd the battle's fierce, conflicting storm,
Death veils the terrors of his awful form:
There, e'en if Victory smile not, Glory's beam
Casts a clear light on life's last ebbing stream.
But, worn by wasting famine, to decay,
Hour after hour, by slow degrees away;
No cheering hope, no glowing pulse to feel,
No kindling tervor of evalted zeal;
Sunk in despair, to wish, yet fear to die,
This—this is death, in all its agony!

Yet, worn by hunger, and opprest with ill, Thy hardy sons remain unconquer'd still. Weakness and Strength alike their weapons wield, And they, who cannot conquer, scorn to yield.

Hark, how without the deafening tumult grows, How swell the shouts of thy victorious foes! Behold, ten thousand torches, harl'd on high, Gleam o'er the walls, and seem to fire the sky. Now, Salem, now, the spreading flame devours Thy homes, thy temple, and the headlong towers: Now Vengeance siming scours th' ensanguined plain, And waves her pimons o'er thy countless slain.

Tis done; proud Salem smokes along the ground, Her pow'r a dream, her name an empty sound. To other realms, from Sion far away, In mute despair, her last sad remnant stray; While all the wounds of unrelenting hate, Beneath their foes, her captive sons await; With no kind care their inward throes to heal, While insult sharpens ev'ry pang they feel.

Yet say, base outcasts of offended Heav'n, Rebelling still as often as forgiv'n, Say are the woes, that now your race pursue, More than your crimes, or heavier than your due? How oft your God has turn'd his wrath away, How oft in mercy has forborne to slay! How long by gentle chastisement he strove To win once more his people to his love! Ah, call to mind, when in a distant land Forlorn ye bow'd beneath a stranger's hand, His hot displeasure on your haughty foes Pour'd the full tempest of unsparing woes. Then, us his flock the tender shepherd leads To softer herbage, and more fertile meads, He led his chosen people far away, Their guide in darkness, their defence by day. Lo, at his word th' obedient depths divide, And whelm th' Egyptian in their refluent tide; While rescued Israel, free from every care, Gains the wish'd bank, and pours the vocal prayer. From the cleft rock see sudden rills rebound, And spread fresh verdure o'er the thirsty ground! Yet still anew your disobedience sprung, And discontent still murmur'd on your tongue; To graven idols still the knee ye bow'd, And join'd in Baal's courts th' incestuous crowd. Still in your pride ye mock'd the threatening Seer, As the deaf adder shuts her reckless ear; Plung'd in the Prophet's breast th' unhallow'd sword, And dared to slay the chosen of the Lord.

Swift into light th' expected years roll on,
Th' Almighty Father sends his promised Son.
Not as when Sinai view'd the law reveal'd
In fearful lightning, and in thunder seal'd;
Now peaceful omens cheer the drooping earth,
And hail the tidings of the Heav'nly birth.
Twas in the solemn stillness of the night,
When the mild moon diffused her cloudless light;

¹ Psalm cv. and cvi. passim.

² Luke ij. 7, 9, 10.

When all the wearied world lay hush'd in sleep,
The wakeful shepherds watch'd their folded sheep.
Clad in the radiant glory of the skies,
A form angelic burst upon their eyes;
And, slowly stealing on their wond'ring ear,
Rose the glad sounds, 'twas Heav'n itself to hear.
"Joy to the world! ye nations cease to mourn,
"Now is the Christ, the promis'd Saviour born!"
And, lo, descending, the celestial train
Swell the full chorus of the rapt'rous strain;
Till on the gale the notes departing die,
And all the vision melts into the sky.

Did ye not then with bursts of transport raise The loud hosannah of exulting praise? With trembling homage round his cradle bend, Watch every look, and every smile attend; And all Creation's noblest gifts combine To form an off ring for the Babe divine? Or, when, his mortal part matured to man, His earthly ministry at length began, Did ye not crowd his heav'nly words to hear, And drink instruction with delighted ear? No-harden'd still your stubborn souls remain, As sterile rocks resist the softening rain. Tho' to the blind unwonted day returns, And pale Disease with health's new ardor burns, Tho' ev'n the grave his mighty will obey'd, Unmov'd, untouch'd your listless eyes survey'd.

Driv'n thro' the world, unknowing where to lie, Despised, rejected, and condemn'd to die, Before his foes behold Messiah stand, Meek as a lamb beneath the shearer's hand. O turn on youder faded form your eyes, Oppress'd with sorrow, and consumed in sight! Mark that pale brow, with heavenly blood embrued, Where Resignation blends with Fortitude; Those lips in inward prayer that gently move, Those eyes, yet beaming with unconquer'd love; That meek composure, that angelic air, Those holy looks; and say if Guilt be there!

O love unbounded, more than words can tell The' hymning angels on the theme should dwell:

Isti. liii. 3. 2 Idem, 7th verse.

Not to one people, not one age confined,
But flowing ever on to all mankind!
See, on the cross those limbs in torture hang,
Convulsed, and quiv'ring with the deathful pang!
A deeper sorrow dwells upon that face,
Than Pam's severest agony could trace;
Ev'n now his spirit mourns Creation's woes,
And breathes compassion for his cruel foes.
See, by a world's united crimes opprest,
He bows his head submissive on his breast.
Now fades the light from those expiring eyes,
And Judah's King—her Lord—her Saviour dies!

Can this be He before whose awful nod Ev'n scraphs shrink? Is this the Son of God? Heir of the world, and Monarch of the sky? The voice of Nature shall itself reply. Else why, O Sun, conceal thy face in dread, Why tremble, Earth, and why give up thy dead? Why rends the temple's mystic veil in twain, And fearful thunders shake th' affrighted plain?

Yet, blind to truth, say, wretched outcasts, say, Wait ye the Saviour of a future day? Lo, he has lived to bless, has died to save, And burst the brazen fetters of the grave! Awake, redeem'd Jerusalem, 2 awake, And from the dust thy sullied garments shake! From thy gall'd neck unloose the servile bands, And cast the fetters from thy captive hands. Break forth, ye mountains, mto joyful song! Ye barren wilds, the rapt'rous stram prolong! Barren no more; unwonted verdure grows, And the dry desert blossoms as the rose. Behold, all Nature proves a second birth, New skies embrace a new-created earth: From the glad scene for ever Woe retires, Pain is no more, and Death himself expires. Ye angels, strike the full-resounding lyre, Swell the glad chorus, all ye head hly choir! She comes! she comes! descending from on high The Holy City meets the ravish'd eye! Bride of the Lamb, without a spot, or stain, Cleans'd of her crimes, and ransom'd of her chain.

¹ Matt. xxvii. 51, 52,

¹ Rev xxi. 1, 2. &c.

² Isai. lii. 1, 2, 9.

Look at her gates, her glorious tow'rs behold, More clear than crystal, and more fair than gold. There dwell the Lord's Redeem'd, in glory bright, Gaze on his face, and live amidst his light: Taste the delights, that time can ne'er destroy, Eternal fulness of unfading joy.

CHAUNCY HARE TOWNSEND.

ODE LATINA.

IOL DEBELLATA.

Oum ut per undas ibat Atlanticas Vis provocatæ ad bella Britanniæ, Ultura despectum tridentem, et Jura sm violata ponti,

Dilecta vidit vela, ubi dissitam Hispana rupes prospicit Africam, De monte Libertas, et Anglis Fausta novum cecinit triumphum

Quo tota Neptuni intremuit domus,* Urbesque, gentesque, et vaga flumina, Latèque consternata tellus Horrait; " Ecce dies latrom

Propinquat ultrix, quæ dabit æquori Fluctus per orbem volvere liberos, Quam mille, du uptis catenis, Voce canent choreâque gentes.

At tu, marmâ sede superbiens Quæ mæsta latè marmora despicis, Captoque detestata nautâ Sceptra tenes, quid marma densos

Cogis maniplos? quid galeam manu
Tergis? quid arcem mœnibus instruis,
Firmasque turres? quid mmaces
Ense micant jaculoque dextra?

© cæca fatis! nonne procul vides Quæ, fæta Marcis fulmine lugubri, Effusa tempestas ab Arcto Occiduas equitet per undas Jovisne fulvo milvius aliti
Opponit ungues, aut ovium lupus
Prædator umbrosâ ruentem
Provocat e siluâ leonem?

Non hæc repulsæ classis Iberiæ, Non Occidentem deseruit vagus Pirata, cognatoque, prædam Ipse petens, minitatur hosti;

Sed dura pubes, quam neque flamina Furentis Austri, non Aquilo minax, Non ipsa deterrebat Arctos, Indomitæ penetrale brumæ.

Qua fraude terrarum ac maris arbitros
Devota falles? I, pete navibus
Campos, ubi Australes virescit
Inter aquas nemorumque nurmur

Perennis æstas, aut ubi frigoris Flammæque sentit perpetuas vices Thule; vel extremos virorum Seras adi, rutilosve pronæ

Tractus diei; non tamen Angliam, Non arma, justique effugies minas Belli, neque expertem Britanna: Invenies ditionis undam."

Dixit, carinâ sed freta fervidus Rupit minister fulminis Anglici, Et, classe conjunctâ, Batavus, Æquorei socius pericli,

Dextra probavit, quid furor æmulus, Et restituti vincula fæderis Possent, quid, ejecto Tyranno, Legitimi pia jura regni.

Quantum illa terrorem intulerit dies, Testes cadentum fumida mænium Fragmenta, viçtricique classis Per tenebras populata flammâ,

Fuscæque cladem in sedibus abditis l'levere matres, et caput Africæ Lugubrè ploravit, recisis Viribus; una dies trecenis

Poems for 1817.

Exemit annis dedecus et notam;
Afflicta quid non debuit Angliæ
Europa, captivos reducens
In patriam populumque cives?

Quæ non coegit dura Necessitas,
Odere fortes bella, neque impios
Sperant tyrannorum triumphos;
Cælum animo superosque tangit

Extollit udâ qui miseros humo,

Et jure, rectum qui colit, imperat,

Hinc nomen Anglorum, subacto

Hic melior titulus profundo.

Nostro resurgat munere ditior
Terra otiosæ blanda Neapolis,
Prædamque Sardoas ad urbes
Angligenûm referant carinæ,

Cùm nos iniquis non miseras opes Scrutamur armis, non decus imperî, Nec vile permutamus aurum Sanguine degeneres Britanno.

Ergo auspicatam cùm jubar aurei Solis revectum retulerit diem, Collesque ridebunt aprici, et Unda vagis recreata ventis,

Tum feriatas ad mare virgines

Ducent choreas et juvenum manus

Conjuncta, dum surgat per unibram

Hesperus, ille levesque risus

Levesque curas spectat amantium;
Matresque circum et soliciti patres
Stabunt, neque infestum timebunt
Per tenebras dare vela nautam.

Quò Jus, et Æquum, et sancta vocat Fides, Itur Britannis; alter in arcibus Stet victor, Alpinamque brumam Transiliat, famulasque secum

Traducat Artes, mox grave dedecus, Vicesque diras illacrymabilis
Passurus exul; nos coronat
Dia Themis meliore lauru;

Per mille crescet non fragilis vices,
Per mille durabit procellas
Angligenûm intemerata virtus.

GUL. NANSON LETTSOM, Coll. Trin. Alumn.

* We have been flattered by an observation made by some of our poetical friends, that Alcaic verses have been more correct since the publication of the rules for that species of verse in the Classical Journal. The present Poem is indeed a proof of the truth of the observation. We have not observed an instance of inaccuracy in the versification.—ED.

Quotannis Proposito, Dignati, et in Curia Cantabrigiensi Recitati.

SHAKSPEARE,

HENRY IV. PART 2. Act 3. Sc. 1.

O Sleep, O gentle Sleep, Nature's soft nurse, how have I frighted thee, That thou no more wilt weigh my eye-lids down,

And steep my senses in forgetfulness? Why rather, Sleep, ly'st thou in smoky cribs, Upon uneasy pallets stretching thee, And hush'd with buzzing night-flies to thy slumber; ... Than in the perfum'd chambers of the great, Under the canopies of costly state, And lull'd with sounds of sweetest melody? O thou dull god, why ly'st thou with the vile, In loathsome beds; and leav'st the kingly couch, A watch-case, or a common larum bell? Wilt thou, upon the high and giddy mast, Seal up the ship-boy's eyes, and rock his brains In cradle of the rude imperious surge; And m the visitation of the winds. Who take the ruffian billows by the top, Curling their monstrous heads, and hanging them With deaf'ning clamours in the slippery clouds, That, with the hurly, Death itself awakes? Canst thou, O partial Sleep! give thy repose To the wet sca-boy in an hour so rude, And, in the calmest and most stillest night, With all appliances and means to boot, Deny it to a king?

IDEM GRÆCE REDDITUM.

Rex Henricus Somnum alloquitur.

ΤΩ Φίλον Τπνου θέλγητου, δς βροτῶν δέμας μαλακῶς ἀτάλλεις, πῶς ποτ ἐκφοβών σ ἐμῆς εὐνῆς ἀπήλασ; οὐ γὰρ ἡδέως ἔτι βλέφαρα βαρύνεις, οὐδ, ἀναψύχων πόνου, τέγγεις φρένας μοι νηδύμω λήθη κακῶν. τί σ', ἐν στέγαισι πολυκάπνοισι κείμενον, νυχία, βοῶντες ὀξὸ, κοιμίζουσ ὀπὶ κεσών, κώνωπες, ἐν δὲ στιβάσιν ἀστρωτοῖς πεσών, Φιλεῖς καθεύδειν μᾶλλον, ἢ 'ν θυώδεσι ἐαλάμοις τυράννων, πολυτελῶν σκηνῶν ὅπο, θελγόμενος ὅμνων ὅμμαθ ἡδίστω μέλει; φεῦ! σκαιὸν λέγω σε θεὸν, δς αὐχμωδοῦς ἔχει στρωμνῆς πενήτων, τὸν δὲ βασιλικὸν λέχος ἔχοντ', ἀϋπνον ἐκλέλοιπας, ὡς ὅταν κώδων ἐν ἄστει πάννυχος τηρῆ Φύλαξ.

τί δ'; οὐκ ἐφ' ὑψηλῷ τε καὶ δυσεμβάτᾳ ἰστῷ, ἀπέδησας βλέφαρα παιδὶ ναυβάτη, ῶς τ' ἐν λίκνῳ, κνώσσοντ' ἐδίνησας, ' βρέφος, αὐτῆ κλύδωνος ἀλμυροῦ τρικυμία; καὶ ταῦθ', ὅτ' ἄνεμος, ἀγρία μιχθεὶς ἀλὶ, κυρτῶν λαβών που κυμάτων πελωρίας ἐπῆςε κοςυφάς, ἐν δ' ὑγραῖσιν αἰθέρος νεφέλαισιν ἐστήριξε, Φρικῶδες βρέμων, ῶστ' αὐτὸν Αΐδην ἐξεγείρεσθαι κτύπω; οὖκουν πέφυκας ἄδικος, ὸς σὰ δῶρ', ' Τπνε, τοίαδ' ἐν ῶρα, διαβρόχῳ ναύτη νέμεις, ἄνακτι δ', ὅσπερ ξύμμαχον τὴν νύκτ' ἔχει, σιγήν τε, χῶ, τι κῶμ' ἄγειν κατ' ὁμμάτων Φιλεῖ μάλιστα, ταὐτὰ δωρεῖσθαι φθονεῖς;

CAMBRIDGE EXAMINATIONS FOR A UNIVERSITY SCHOLARSHIP.

As a Supplement to an Article in the first part of this Number, we are enabled to give the course of examination for a University Scholarship in the present year. Our readers will doubtless agree with us, that it would be difficult to propose to the young students of any University in the world a series of exercises, better calculated to call forth their powers, display their learning, or discriminate between the different degrees of their merit.

Morning I.—Essay in Latin prose on the following subject: Quod cnim homini naturaliter insitum est, co decet uti, et, quicquid agas, agere pio viribus.' Cic. de Senectute.

Morning II.—Translation into Greek lambics from Exodus xiv.

and into Greek Anapests from xv. 1-7.

Morning III.—Translation into English prose from Theocritus, Idyll. vii. 50—89; and into English prose and Latin lyrics, the ode of Simonides: "Οτε λάρνακι, κ. τ. λ.

[&]quot; Ως φαμίνα, δίνασε σάκος μέγα" τοὺς δ' Γλαβ' "Τπιος." ΤΗΣΟΓΑ. Idyll. 24.

Θελγομίναι άξει κάμα κατά βλιφόρου. PLATO, apud Brunck. Anthol. tom. L.
p. 171.

Morning IV.—Translation into English prose from Cicero, At vero Androni Sextilio, &c.; from Tacitus, O conditiones miseras, &c.; from Sallust, Corpus illi laborum tolerans, &c.; and into Latin verse from Job, c. xxviii.

Morning V.—Translation into English prose from Thucydides ii. 76. Οι δε Πελοποννήσιοι · · · · το προέχον της εμβολης; Demosthenes in Androtionem: Καλ μην κάκεινό γε · · · · ως ου πεποίηκεν, άποδεικνύναι; Aristotle, περί 'Ρητορικής, ii. 11. Πῶς δ' ἔχοντες • • • ὑπάρχη αὐτοῖς ή τύχη.

Morning VI.—Latin Elegiac verses on the following subject: 'Fertilis frugum pecorumque tellus Spicea donet Cererein corona. Nutriant fœtus et aquæ salubres, Et Jovis aura.' Hor. Carm. Sec.

Morning VII.—Translation into Greek and Latin prose from English prose.

Morning VIII.—The following miscellaneous questions.

1. About what period did the Pelasgi settle in Greece? From what countries did they come? Mention, upon the authority of ancient writers, the principal divisions, and the different migrations, of this people.

2. What was the time, and what the circumstances of the ${f Do}$ rian invasion of the Peloponnesus? What were the consequences to the former inhabitants! and what the different dynasties esta-

blished by the Dorians in that peninsula?

3. In what part of Greece was the lonic dialect originally used? Mention the subsequent distinctions in this dialect, and the diffe-

rent authors that used it, whose writings are still extant.

4. Of what nature was the government of the Grecian States as represented in the works of Homer? Compare it with that of other nations in an early state of their civilization. Support your assertions with quotations.

5. What appear to have been the limits of the geographical knowledge of Honier? What progress had other sciences made in his time? What reason is there to suppose that the art of Writing

was then known?

6. What arguments respecting the antiquity of Homer's poems can be drawn from the versification? Have you grounds to think it probable that the Iliad and Odyssey are the productions of different persons? Are there any parts of either poem which you assign to a later age!

7. To what ages ought the following works properly to be assigned—Homer's Hymns, Hesiod's Poems, Anacteon's Odes,

Æsop's Fables?

8. What were the principal authorities of the Athenian government established by Solon? Enumerate the changes and revolutions which took place in this government to the time of Philip of Macedon, with the dates and circumstances of each.

9. What is the statement of different writers respecting the naval and military forces of the Persians in the invasion of Greece by Xerxes? What appears to have been their total loss in this expedition?

10. What were in succession the predominant Empires in Asia, from the first Assyrian Empire to that of the Parthians? Mention the events which occasioned the power to change hands; and the founder of each dynasty.

11. Enumerate the principal events which took place in Greece between the Peloponnesian and the Phocian Wars, with their dates in Olympiads, and the principal actors in each.

12. Who were the principal Orators contemporary with De-

mosthenes, and what their respective characters?

13. What are the different Greek historians from whom we derive our knowledge of Grecian affairs, from the earliest times to the death of Alexander? What are the limits of the history of each?

14. Translate the following passages:

Ευπ. Iphigenia in Aulide. v. 366.
μυζίοι δέ τοι πεπόνθασ' αὐτὸ πρὸς τὰ πράγματα,
ἐκπονοῦσ' ἔχοντες, εἶτα δ' ἔξεχώζησαν κακῶς,
τὰ μὲν ὑπὸ γνώμης πολιτῶν ἀσυνέτου, τὰ δ' ἐνδίκως,
ἀδύνατοι γεγῶτες αὐτοὶ διαψυλάξασθαι πόλιν.
'Ελλάδος μάλιστ' ἔγωγε τῆς ταλαιπώζου στένω,
ῆ, θέλουσα δρᾶν τι κεδνὸν βαρβάρους, τοὺς οὐδένας,
καταγελώντας ἐξανήσει διὰ σὲ καὶ τὴν σὴν κόρην.
μηδέν ἄν γένους ἕκατι προστάτην θείμην χθονὸς,
μηδ΄ ὅτλων ἄρχοντα' νοῦν χρὴ τὸν στρατηλάτην ἔχειν
πόλεος' ὡς ἄρχων ἀνὴρ πᾶς, ξύνεσιν ῆν ἔχων τύχη.

SOPII. Philoctetes. v. 827.

Τπν οδύνας άδαης, Τπνε δ' άλγεων, εὐαής ήμιν ελθοις, εὐαίων, εὐαίων άναξ:

ἤμμασι δ' άντίσχοις τάνδ' αἴγλαν, ά τέταται τανῦν.

ἤθι, ἤθι μοι παιών.

ἤ τέχνον, ὅρα γε ποῦ στάσει, ποὶ δὲ βάσει, πῶς δέ μοι τάντεῦθεν φροντίδος: ὁρᾶς ἡδη, πρὸς τί μενοῦμεν πράσσειν; καιρός τοι πάντων γνώμαν ἴσχων πολὺ παρὰ πόδα κράτος ἄρνυται.

15. Explain distinctly the usages of the indicative, subjunctive,

and optative moods after ως, όπως, Ινα, όφρα.

16. Give the laws and restrictions observed in the regular anapestic measures used in Tragedy, and in Comedy, with instances in each case.

17. What is the distinction between the three ages of Greek Comedy? What political characters were introduced upon the stage by Aristophanes? What reason is there to attribute to him any share in the destruction of Socrates?

18. Give instances of the changes made by Horace in each of

the Lyric metres which he borrowed from the Greeks.

19. Give some account of the first settlers in Italy, their names, origin, and language; and mention the original sources of the Latin language.

20. Give some particulars of the life of Sallust—the commotions of the State in which he was concerned, and the part he acted, with your opinion of his style as an historian.

21. Give an account of the Roman Calendar.

22. Enumerate the principal events which took place in the Roman State from the end of the third Punic War to the death of Julius Cæsar, with their dates.

ADVERSARIA LITERARIA.

NO. XIII.

I beg to offer to you what I am inclined to think the true exposition of a very brief, though a wonderfully fine, comparison, which occurs in Iliad. xiii. 754, 755. The subject of it is Hector: and the hero in his impetuous course is compared by the poet, if we literally translate his words, to a snowy mountain.

Ή ρα, καὶ ώρμήθη, ὄφεϊ νιφόεντι ἐοικώς, Κεκληγώς, διὰ δὲ Τρώων πέτετ', ἡδ᾽ ἐπικούφων.

According to Clarke, Similitudo hic desumta, partim ex corporis proceritate et robore, partim ex galeæ splendore et albitudine cristæ. According to Pope, This simile is very short in the original, and requires to be opened a little to discover its full beauty. I am not of M. Ducier's opinion, that the lustre of Hector's armour was that which furnished Homer with this image: it seems rather to allude to the plume upon his helmet, in the action of shaking which this hero is so frequently painted by our

author, and thence distinguished by the remarkable epithet xogubalohos. This is a very pleasing image, and very much what the

painters call picturesque.

Now, with all due respect to these two eminent men, it is still difficult to conceive, how the poet should think it an apt illustration of his subject, to compare a rapidly moving warrior to a deeprooted and stationary mountain, merely because the man wore a helmet with a white crest, and because the mountain was topped with white snow. The leading idea, present to the mind of Homer, and fully expressed by the word ωρμήθη, was certainly, the rapid motion of Hector, not his white crest; and, both the total silence of the poet in this place relative to the white decoration, and the obvious turn of the sentence itself, require us to conclude, that the hero is compared to a snowy mountain on account of his rapid motion. How then are we to elucidate such an extraordinary comparison? Very naturally and easily, I think, by supposing that the poet alludes to an avalanche or gigantic mass of snow, which in mountainous Alpine regions is often detached from the side or summit of a glacier, and which rushes with tremendous and accumulating force down to the valley beneath. If this be the meaning of Homer, perhaps there is not a more magnificent simile in the whole Iliad: and his rambling life and inquisitive humor make it not improbable, that he might have heard from eye-witnesses an account of the ruin produced by an Alpine avalanche.

G. S. F.

Use of Arches known among the Ancients.

Finding that many artists imagine that the use of arches in building was unknown to the ancients, I send you the following most respectable testimonies, in confutation of that opinion.

In the first place, this is evident from a very beautiful passage in the treatise Περὶ Κόσμου, or, On the World, ascribed to Aristotle, and which, if not written by him, is acknowledged by all the learned to be of great antiquity. Proclus, in his Commentaries on the Timæus of Plato, cites it as a work which was believed long before his time to be the production of Aristotle, though it is not indubitably certain that he was the author of it. The passage is this: ἔοικε δὲ ὄντως, εἰ καὶ μικρότερον, παραβάλλειν τὸν κόσμον τοῖς ὁμφάλοις λεγομένοις τοῖς ἐν ταῖς ψαλίσι λίθοις, οῦ μέσοι κείμενοι κατὰ τὴν εἰς ἐκάτερον μέρος ἔνδοσιν, ἐν ἀρμονία τηροῦσι καὶ ἐν τάξει τὸ πᾶν σχῆμα τῆς ψαλίδος καὶ ἀκίνητον. i. e. "The world indeed appears to resemble (though it is comparing a great thing with one that is small) what are called key-stones in arches of stone, which, being

situated in the middle of the pressure on each side, preserve the whole figure of the arch in harmony and order, and in an immoveable position." And afterwards, he admirably observes, "that this is the relation which God has in the world, since he connects the harmony and preservation of the whole of things." Τ.ῦτον οῦν ἔχει τὸν λόγον ὁ θεὸς ἐν κόσμφ, συνέχων τὴν τῶν ὅλων ἀρμονίων τε καὶ σωτηβίαν. The other testimony is that of Seneca, who in his 90th Epistle says, that, though the invention of arches is ascribed to Democritus, yet it is necessary that prior to him there should have been bridges and gates, the summits of which are curved. His words are as follow: "Democritus, inquit, invenisse dicitur fornicem, ut lapidum curvatura paulatim inclinatorum medio saxo alligaretur. Hoc dicam falsum esse. Necesse est emm ante Democritum, et pontes et portas fuisse, quarum fere summa curvantur."

T. TAYLOR.

On the death of Jerome Savonarola, (who was burnt alive in 1498, at Florence,) by Giovanni Antonio Fluminio.

Dum fera flamma tuos, Hieronyme, pascitur artus, Relligio, sacras dilaniata comas, Flevit, et, O, dixit, crudeles, parcite, flammæ; Parcite, sunt isto viscera nostra rogo.

Menage, having sent a Spanish Dictionary to a friend as a present, received in return a dozen of excellent Beaune wine. He immediately sent the following Epigram:

Lexicon Hispanicum tibi do; tu vascula bis sex Belnensi gratus das mihi fœta mero.

Quod si nosse cupis munus præstantius utrum;

Quis dubitet? præstat munus, amice, tuum.

Unam quippe meo disces e munere linguam;

Omnibus at linguis per tua dona loquar.

In tumulum Laurentii Toscani.

Si Virtus, Pietasque mori, ac Prudentia possent, Debuerant, Laurens, te moriente mori. Έκτορα Ποιαμίδην, καὶ εἰ μάλα καρτεοός ἐστιν. Hom. Iliad. κὶϊί. 316.

This verse is suspected to be spurious, and to have been inserted for explanation. One proof has not been observed: xal is not used long before a vowel, unless it is digammated, which it is not in il. This position has, indeed, offended the ear of some of our best critics, who have recommended a transposition.

Sabellicus had, in his historical works, written many sound maxims of prudence, wisdom, and morality; but his life was far from giving an example of those virtues. Hence Latonus sent him this distych:

Quid juvat humanos scire atque evolvere casus, Si fugienda facis, si facienda fugis?

Literary Intelligence.

GERMANY.

We present to our readers our usual extract from the Catalogue of books published at the Easter Leipzig fair, 1817. Fuller Catalogues may be had of Black and Son, and also of Bohte, York Street, Covent-Garden.

Acta nova Reg. soc. scient. Upsal. vol. viium. 4to. Upsal, 1817.

Adelung's, J. C., Mithridates od. allgemeine Sprachenkunde mit dem Vater-Unser, als Sprachprobe in beinahe fünfhundert Sprachen u. Mundarten. 4r u. letzt. bd. fortgesetzt von Dr. J. S. Vater. 8. Berlin, 1817.

Adelung's, F. von, Nachtrage zum 111, 211, und 311, bde. des Mithridates, nebst einer Abhandlung d. Hrn. Min. v. Humboldt, über d. Vaskische. Herausg. v. Dr. J. S. Vater. 8. Ibid. 1817.

Æschylos, die Perser, u. Sieben gegen Theben, in d. Versart d. Urschrift, verdeutscht von C. P. Conz. 8. Tübingen, 1817.

Anakreon's Lieder. Neu übersetzt u. m. nöthigen Erläunterungen begleit. v. Dr. A. Drevel. 8. Landshut, 1817.

Anthologia Gr. ad. fid. Cod. olim Palatini nunc Parisini ex apographo Gothano edita. Curavit, epigr. in Cod. Palat. desiderata et annot. crit. adjecit Fr. Jacobs. Tom. ivus. et ult. Appa-

rat. Crit. ad Antholog. complect. Acced. var. lect. ex ipso cod. Palat. collata a Dr. A. J. Paulssen. 8. Lipsia. 1817.

Apollonii Alexandrini de Constructione lib. iv. Ex recensione J. Bekkeri. 8. Berolini. 1817.

Appendix ad Arnobii Afri edit. Lipsiensem, continens annott. et emendatt. quasdam cum priorum interpp. aliorum Vv. Dd. in hac edit. omissas, inspersis C. A. Heumanni conject. hactenus meditis, quibus suar. annott. supplement. adj. J. C. Orellius. 8. Lipsiæ. 1817.

Appendix ad totius Latinitatis lexicou Æg. Forcellini fol. Patavii et Lipsiæ. 1817.

Ars Consentii V. C. de barbarismis et metaplasmis, nunc primum e vet. cod. in lucem protracta. 8. Berolini. 1817.

Bax, C., de naturæ simplicitate in Euripidis Oreste Disputatio. 8. Trajecti ad Rhenum et Lips. 1817.

Beck, Prof. J. R. G. Lexicon Lat.-Græcum manuale in usum scholarum, accedit index prosodicus. 8. Lipsiæ. 1817.

Bellerman's, J. F., Versuch einer erklarung morgenländischer Talismane, m. 1 Kupfert. 8. Erfurt. 1817.

Bendavid, Laz. zur berechnung und geschichte des jüdischen Kalenders, aus d. Quellen dargestellt. 8. Berlin. 1817.

Bertholdt's, Dr. L., Histor. krit. Einleit. in d. sämmtl. kanon. und apokryph. Schriften d. alten u. neuen Testaments. 6r und letzt. Theil. 8. Erlangen, 1817.

Bibel, od. d. ganze heil. Schrift. des alten us neuen Testaments, aus d. Grundsprachen inbersetz u. durch nöthige Anmerkung. erläuteit v. Dr. E. F. C. Œrtel. 1r. band. die 5 bücher Mosis enthaltend. 4. Anspach. 1817.

Blätter, philologische. 1s. heft. 8. Breslau, 1817.

Brandstetter, R., das griechische zeitwort, systematisch dargestelt. 8. Landshut. 1817.

Brafidas, od. gebahrende Antwort auf d. in der Jen. allgem. Litt. Zeit. N. 172. 1816. erschienene recension der von Prof. Berger griechisch mit deutscher metrischen Uebersetzung herausgeg. ächten Fabeln des Babrius. 4. München. 1817.

Buttmann's, Ph., griechische Grammatik. 8. Berlin. 1817.

Buttmann und Schleiermacher über Heindorf und Wolf. 8. Ibid. 1817.

Callimachi hymni et epigrammata in usum lectionum edidit H. F. M. Volger. 8. Lipsia. 1817.

Cäsars, J. C., Denkwürdigkeiten aus d. gallischen und bürgerlichen Kriege übersetzt von P. L. Haus 3te Ausgabe, Durchaus umgearb. von D. F. Strack, 2 theile 8. Frankfurt a. Main. 1817.

Chœrili, Samii, quæ supersunt collegit et illustravit, de Chœrili ætate, vita, et poesi aliisque Chœrilis disseruit A. F. Naeckius. Inest de Sardanapali epigrammatis disputatio. 8. Lips. 1817.

Ciceronis, M. T. Opera quæ supersunt omnia, et diperditorum fragmenta. Recognov. C. G. Schütz. tom. xvi. pars 1ma et 2da. 8. Lips. 1817.

Ciceronis, M. T. de natura Deorum, lib. iii. ex recensione J. A. Ernesti, et cum eruditorum notis quas J. Davisii edit. ultima habet. Accedunt F. Creuzeri annott. ac præfat. et var. lect. ex xiii. cod. Mss. nondum collatis enotatæ. Apparatum crit. et notas aliquot suas adj. G. H. Moser. 8. Lips. 1817.

Ciceronis, M. T., ad M. Brutam orator. Ex recensione J. A. Ernesti. Edit. repetita. 8. Lips. 1817.

Dessen auserlesene Reden übersetzt von J. C. Wolff. 3r. bd. oder Reden gegen den Veires. 1r. bd. 8. Altona, 1817.

Clementis Alexandrini liber, quis dives salutem consequi possit, perpetuo commentario illustratus a C. Segaar. Gr. et Lat. 8. Trajecti ad Rhenum et Lips, 1817.

Creutzeri, F. Meletamata e disciplina antiquitatis. Fasc. 2us. 8. Lips. 1817.

Dereser, Th. A. Grammatica Hebraica, cum notis masoreticis ac dictis quibusdam vet. testamenti classicis. 8. Lucernæ et Lips. 1817.

Dionysii Halicarn. Romanarum antiquitat. pars hactenus desiderata, nunc denique ope codd. Ambrosianorum ab Aug. Maio quantum licuit restituta. Gr. Ad edit. princ. Mediolanensem. 8. Francofurti ad Mænum. 1817,

Engel's Dr. Ph. C. T., Hebraische Grammatik fur die Ersten Anfauger 8. Giessen, 1817.

Euripidis Tragædiæ et Fragmenta. Recensuit, interp. lat. correxit, schol. gr. e codd. Mss. partim supplevit, partim emendavit Aug. Matthia. tom. 4us. complect. scholia gr. 8. Lips. 1817.

Eutropii Hist. Romanæ, ed. accurat. mit Deutschen Anmerkungen u. einem Wortregister, von G. F. Seebodi. S. Hannover. 1817.

Frähn, C. M., de Arabicorum etiam auctorum libris vulgatis erisi poscentibus emaculari exemplo posito historiæ Saracenicæ Elmacini. 4. Casani et Lips. 1817.

Fundgruben des Örients, bearbeitet durch eine Gesellschaft von Liebhabern. 5r. bd. 1s.—4s. heft. fol. Wien. 1817.

Gesenius, Dr. W., ausführlicheres gram. krit. Lehrgehäude d. hebräischen Sprache mit durchgangiger Vergleichung de verwandten dialekte. 2 bde. 8. Leipzig. 1817.

Dossen hebräische. Grammatik. Zweite verbess. auflage. '8. Halle. 1817.

Dessen hebräisches Lesebuch. Zweite verbesserte auflage. 8. Ibid. 1817.

Gnomici poetæ Græci. Ad opt. exemplar. fidem emendavit R. F. P. Brunck. Edit. nov. corr. notisque et indd. aucta. 8. Lips. 1817.

Gregorius aus Cypern, d. Patriarchen, Selbst biographie. nebsteinem d. ungedruckten Briefe Gregor's; griechisch aus ein. Handschrift herausg. von Dr. F. C. Matthia. 4. Frankf. a. Main. 1817.

PREPARING FOR PUBLICATION.

CLASSICAL.

M. GAIL announces the continuation of his Historical, Military, Geographical, and Philological Researches, under the general title of the *Philologue*. The second volume contains many grammatical and lexicological contributions towards the improvement of the New Edition of H. Stephens' Thesaurus Linguæ Græce, now in the press at London. M. Gail intends likewise to establish a new monthly Journal at Paris, to be entitled le Philo-

logue, the first number of which, containing 240 8vo. pages, will-appear on the 1st of January 1818, if a sufficient number of subscribers can be obtained before that time. As in the second volume of his Researches, the disquisitions in the Journal noticed above, will relate principally to Grammar and Lexicology, but without neglecting ancient Literature, History, Tactics, and Geography, with reference to Herodotus, Thucydides, Xenophon, and the Thesaurus Linguæ Græcæ. M. Gail has proved, that he is well qualified for conducting such a Journal, by several erudite Articles in the London Classical Journal, by his excellent Editions of Xenophon and Thucydides, in Greek, Latin, and French, with elucidatory Maps and Plates; and by his Atlas to facilitate the study of Ancient History, which have met with the approbation of all Greek scholars in Europe.

IN THE PRESS.

CLASSICAL.

No III. of Stephens' Greek Thesaurus will be published on the 1st of November.

Mr. T. TAYLOR is reprinting his translation of Aristotle's Ethics, Rhetoric, and Politics, in 2 Vols. 8vo. for the use of the Universities.

Mr. DIBDIN'S Bibliographical Decameron will be published on the 1st of November. Price 9l. 9s. The work, executed in the finest style of printing, in three royal octavo volumes, will be found to contain, in the whole, not fewer than four hundred and sixty embellishments: of which upwards of eighty are upon copper; exclusively of the head and tail pieces, and initial capital letters, to each Day.

A concise Grammar. of the Romaic, or Modern Greek Language, with Phrases and Dialogues on the most familiar Subjects, compiled by Dr. Robertson, after a residence of some years in the Ionian Islands. 12mo.

Herodiani Pseudo-Lexicon vocatum Epimerismi, collated from the Manuscript in Paris, under the direction of Professor Boissonade, whose critical and explanatory notes will be added. One vol. 8vo.

Leonis Diaconi Historia: de Tactica ad Imperat. Nicephorum Phocam; Fragmentum Historiæ Joannis Epiphanii, &c. Gr. et Lat. cum notis, &c. Hasii, Parisiis, et typographia regia, in folio.

NO. XXXI. Cl. Jl. VOL. XVI. N

This volume completes the collection of the Byzantine Historians.

Æneæ Tactici Liber de toleranda obsidione, Gr. ad Codd. Mss. recens. vers. Latinam et Comment. Casamboni, notasque var. et suas adjecit Jo. Conr. Orellius. Supplementum ad editionem Polybii Schweighaeuserianam, Lipsiæ, in 8vo.

Strabonis Geographica, a Siebenkees et Tzschucke, tom. vii. et viii. absol. a Friedemann, in 8vo.

BIBLICAL.

An Introduction to the Critical Study and Knowledge of the Holy Scriptures: in three Parts. By Mr. T. H. Horne. In two large volumes 8vo., illustrated with Maps. Part I. will comprise a concise view of the geography of Palestine, and of the political. religious, moral, and civil state of the Jews; illustrating the principal events recorded in the Bible. Part II. will present a copious investigation of the principles of Scripture interpretation, and their application to the historical, prophetical, typical, doctrinal, and moral parts of the Sacred Writings, as well as to the practical reading of the Scriptures. Part III. will be appropriated to the analysis of the Bible; including an account of the canon of Scripture; together with critical prefaces, and synopses to each book upon an improved plan. An Appendix will be subjoined; containing an account, 1. Of the principal Mss. and editions of the Old and New Testaments; 2. Of various readings, with a digest of the chief rules for weighing and applying them; 3. Rules for the better understanding of Hebraisms; 4. A concise Dictionary of the symbolical language of Scripture; 5. Lists of commentators and biblical critics of eminence, with bibliographical and critical notices of each, extracted from authentic sources: together with chronological and other tables, necessary to facilitate the study of the Holy Scriptures.

Extract of a Memoir, relative to the Progress of the Translations of the Sacred Scriptures at Serampore, in the year 1815.

In the course of the past year, the Pentateuch has been printed off in the Orissa language. This fully completes that Version of the Scriptures; and thus the whole of the Sacred Oracles are now published in 100 of the languages of India—the Bengalee and the Orissa.

In the Sungskrit, the Historical Books have been completed at press. In this ancient language, therefore, the parent of nearly all the rest, three of the five parts, into which we divide the Scrip-

tures, are both translated and published—the New Testament, the Pentateuch, and the Historical Books. Two remain, the Hagiographa, which is now put to press, and the Prophetic Books, the translation of which is nearly finished.

In the Hindee language, the Historical Books are printed off: three fifths of the whole Scriptures are therefore published in this language. The Hagiographa is also put to press, and the Prophetic Books are translated. It was mentioned, in the last Memoir, that the second edition of the New Testament in this language was nearly finished; it is now in circulation.

In the Mahratta language, the Historical Books are nearly printed off: the Pentateuch and the New Testament have been long in circulation. After these, ranks the Shikh, in which the New Testament is printed off, and the Pentateuch printed nearly to the end of Exodus.

In the Chinese, the Pentateuch is put to press; but various circumstances have concurred to retard the printing. The method of punting with moveable types being entirely new in that language, much time is necessarily requisite to bring it to a due degree of perfection. The present type, in which we are printing, is the fourth in size which we have cut, each of which has sustained a gradual reduction. This last, in which we are printing both the Pentateuch and the Epistles, is so far reduced, that, while a beautiful legibility is preserved, the whole of the Old Testament will be comprised in little more than the size of an English Octavo Bible, and the New Testament will be brought into nearly the same number of pages as an English New Testament. The translation of the Old Testament is advanced nearly to the end of the Prophet Ezekiel.

In the Telinga language, the New Testament is more than half through the press. In the Bruj, also, the New Testament is printed nearly to the end of the Epistle to the Romans.—Three of the Four Gospels are finished in the Pushtoo or Affghan language, the Bulochee, and the Assamese. Those in which St. Matthew is either tinished, or nearly so, are, the Kunnata, the Kuncuna, the Mooltanee, the Sindhee, the Kashmeer, the Bikaneer, the Nepal, the Ooduppore, the Marawar, the Juypore, the Khassee, and the Burman languages.

A very important resolution passed at the second meeting of the Committee of the Russian Bible Society, purporting, that they should not consider themselves to have attained the object of their Institution, till they had provided with a Bible, every family, and, if possible, every individual, in the Russian empire. With what

ardour they are pushing forward to the attainment of this object, and accelerating the complete redemption of their pledge, will be seen, when it is stated, that, from the establishment of the Society to the present time, its Committee have either published, or are engaged in publishing, no fewer than forty-three editions of the Sacred Scriptures, in seventeen different languages, forming a grand total of 19ti,000 copies. In the course of 1816, the Committee have completed,

Slavonian Bibles	Copies. 10,000
Slavonian New Testaments	10,000
Finnish Bibles	5,000
French Bibles	5,000
Samogitian New Testaments	5,000

The printing of the following editions is either continued, or has been begun, in 1817:

	Copies. ,
Slavonian Bibles	20,000
Slavoman New Testaments	5,000
Armenian Bibles	5,000
Armeman New Testaments	5,000
Greek Bibles	3,000
Greek New Testaments	5,000
Georgian New Testaments	2,000
Moldavian Bibles	5,000
Moldavian New Testaments	5,000
German Catholic Testaments	5,000
Lettoman New Testaments	5,000
Dorpatian Esthonian Testaments	5,000
Tartar New Testaments	2,000
Gospel of St. Luke, (extra copies)	2,000
Psalms	2,000
Calmue Gospel	' 2,000

The number of Bibles and Testaments, issued in the course of the year, amounts to 19,431 copies, which is only about 500 copies fewer than were issued the three former years put together. The expenditures are nearly in the same proportion. During the three years, 1813, 1814, and 1815, the expenditure amounted to 297,642 rubles, 47 copies; in 1816, alone, 227,770 rubles, 73 copies.

Besides the above, preparations are making for Stereotype editions of the Scriptures, in five different languages: they are in a course of translation into the Common Russian, Tartar, and Carelian languages; and measures are adopting for procuring translations into Turkish Armenian and Buriat Mongolian.

When the Report was finished, His Excellency Mr. Turgeneff gave an account of the progress and success of the Bible Societies in other parts of the world, and expatiated particularly on the gigantic operations of the British and Foreign Bible Society.

JUST PUBLISHED.

CLASSICAL.

Bibliotheca Classica Scriptorum Græcorum diligentissime curata. Qui literis græcis delectantur, iis collectionem novam Auctorum Græcorum ita inscribendam et impensis meis edendam indico. Complectetur hæc bibliotheca probatissimos utriusque orationis scriptores Græcos, quorum multi novis curis emendati prodibunt. Godofied. Henric. Schæferus, Professor Lipsiensis, vir laude mea major, curam geret typographicam; forma crit, quam dicunt octavam, eademque minor. Literis exscribetur oculos legentium haud fatigantibus, versuum et capitum numeri indicabuntur, atque tum cultu et habitu, quo ornabitur idoneo, tum facilitate, qua emi et companari poterit, curabo, ut hæc collectio præstet.

ANTIQUITIES.

Athenicusia, or obss. on the topography and buildings of Athens, by W. WILKINS. Lond. 1816.

Elucidations of some ancient gents, or engraved stones, by A. de Nordstein. 8vo. Altenburgh 1817.

Italy — The Abbate MAI has published at Milan, an advertisement, dated May 1, 1817, relative to a small work of Philo edited by him last year. This Treatise on Virtue, which in the Milan Ms. bears the name of Philo, was written according to other Mss. by George Gemistes Pletho, a Greek author of the 15th century. It has even been long printed with the name of the latter (grace et latine, Basilea, Oponn, 1552, 8vo.—grace cum Stobeo, Antherpiæ, Plantin, 1575, fol. &c.) M. Mai, therefore, declares that he shall erase it from the list of inedited works lately published by him, observing at the same time, that it would not be impossible to assert the claim of Philo to this little Treatise, 1. because the Milan Ms. ttributes it to him; 2. because the style seems not unworthy of antiquity; 3. because Gemistes Pletho, who has borrowed from various ancient authors, as Aristotle, Theophrastus, Xenophon, Plutarch, and Arrian, might have done the same in regard to Philo; 4. because Philo actually composed books, no longer extant, upon virtue. Anticipating, however, the answers that might be made to these four observations, and unwilling to engage in any dispute on the subject, M. Mai requests scholars to consider his edition, of which he distributed but a very small number of copies, as cancelled.

BIBLICAL.

A new translation, being the sixth edition, of the Treatise concerning Heaven and its wonders, and also concerning Hell—being a rélation of things heard and seen by the Hon. Emanuel Swedenborg. 8vo. Demy, 8s. 6d.—Royal, 12s. 6d.

Sermons on Faith, Doctrines, and Public Dutics, by the Very Rev. W. VINCENT, D. D., late Dean of Westminster, 8vo. 1817.

To sixteen Scimons, such as might be expected from the learning, orthodoxy, and piety of the author, is added a Concioud Clerum, in which the pinest doctrines of the Gospel are displayed in easy, correct, and elegant Latinity.

As a supplement to the account of Dr. Vincent's Life, given in our late Numbers, we extract from this publication the following Epitaph, written by himself:

Hic requiescit
Quod mortale est
GULILLMI VINCLNT,

Qui puei sub domus hujusce penetialibus enutritus,

mox,

post studia Academica confecta, unde abiit reversus, atque ex imo Præceptorum gradu summum adeptus, Decanatu tandem hujusce Ecclesiæ, quam unice dilexit, decoratus est.

Qualis fuerit vita, studiis, moribus,

Qualis fuerit vita, studiis, moribus,
Lapis Sepulchialis taceat.

Ortus ex honesta stirpe Vincentiorum
de Shepy, in agro Leicestriensi;
Natus Londini Novembris secundo 1749;
Denatus Decembris 21^{mo}

1815.

ORIENTAL.

Fantasics of antiquity, or a collection of the mythological traditions of the Greeks, Romans, Egrptians, and other oriental nations. By J. A. RICHTER. 5 v. 8vo. Leipsic 1815—1817.

To this modest silence respecting his talents and his virtues, an elegant and proper allusion is made in the Prologue to the Westminister Play of 1816. Sec Class. Journ. No. XXIX. p. 158.

J. B. Gail, Lecteur Royal et Conservateur des Manuscrits Grecs et Latins à M. le Rédacteur du Classical Journal; Sur la prétendue ville d'Olympie.

Monsieur le Rédacteur,

M. l'Abbé Ciampi, professeur à Pise, et M. de Hanse, à Palernie, en Sicile, ont, tous les deux à différentes époques, mé l'existence de la ville d'Olympie: à qui des deux appartient l'honneur de la découverte? m à l'un m à l'autre. On en trouve la prenve dans le rapport de l'Institut, 2 Juillet 1813, p. 42. On y annonce un mémoire où j'essaie de prouver, ce que cinq ans auparavant j'avais enseigné dans mon école, qu'il n'y a jamais eu de ville d'Olympie, et qu'il ne manque à cette ville tant célébrée, si bien décrite par les géographes, si bien représentée par de savans burins, que d'avoir existé. J'ai lu ce mémoire en 1812, fait attesté par le rapport de l'Institut, 2 Juillet 1813, p. 42. Je n'ai donc rien pris ni à M. de Hause ni à M. l'Abbé Ciampi: l'avantage de la priorité m'appartient donc. J'ai dû en faire la remaique puisqu'elle a échappé à l'impartial M. Quatremère, rendant compte de l'opinion de M. de Hause. Elle n'étoit pas indifférente, puisque mon mémoire, en révélant une erreur à nos géographes, combat en outre une doctrine scholastique cironée, et qu'elle apprend à nos écoles à éviter un contre-sens six cent fois répété par les scholastes, commentatems, traducteurs, lesquels, avant mor, traduisorent ή 'Ολυμπία, la ville d'Olympie, lorsqu'il fallort traduire, le territoire de l'Olympie, ou l'Olympie. Dans le même article du Journal des Savans, M. Quatremère de Quinci rappelle ce passage de Pausanias (v. p. 401.) ύπελθείν ούχ ολόν τά έστιν ύπὸ τον θρόνον, que l'on traduit d'après M. Heyne par, on ne saurait passer derrière le tione; ou avec d'autres, sous le trone. Mais ὑπὸ suivé d'un acc. signifiant piès de, il faut, je crois, tradnire, il n'est pas possible d'approcher du trône. Pourquoi? c'est qu'un mur d'appur et de défense à l'entour du trônc empéchoit d'en approcher. (Voy. Paus. I. I. et) Pausan, I. I. et M. Quatremère.

Je reviendrai sur ce passage, et j'examinerai, 1. Si Pausamus alla sous le trône d'Amyclée, comme le pense le savant M. Quatremère, quoique le texte me semble due positivement le contraire. 2°. Si in τρίποδι (Paus. ini. p. 294. hg. dein.; et p. 299. l. l.) signifie sous le trépied; 3°. Si ὑπὸ θρόνον signifie sous le trône (Cl. p. 296. l. 27 et 28.) Sur ὑπὸ avec dat. et acc. voy. tom. ii. de mes Recherches Histor, Géogr. p. 150.

L'Académie Royale des Inscriptions et Belles Lettres a décerné deux pux dans sa séance du 25 Juillet dernier. Le sujet d'un de ces prix, remis l'année dernière au concours, et renvoyé à celle-ci, était, de rechercher tout ce qui peut concerner "l'Histoire de l'Ecole d'Alexandrie depuis ses commencemens jusqu'aux premières années du troisième siècle de l'ère chrétienne."

"Les auteurs devaient comparer l'état des sciences, des lettres et de la philosophie dans cette école, pendant le période de temps indiqué, avec l'état de ces mêmes connaissances dans la Grèce et dans les diverses parties de l'empire fondé par Alexandre. Ils devaient aussi rechercher les causes des différences qui caractérisent l'Ecole d'Alexandrie, et faire voir comment ces causes ont piéparé la doctrine des nouveaux Platoniciens."

L'Académie a décerné le prix au Mémoire enregistré sous le n° 1, et qui a pour épigraphe ce passage de S. Clément d'Alexaudrie:

"Φιλοσοφίαν δε, οὐ τὴν Στωϊκὴν λέγω, οὐδε τὴν Πλατωνικὴν, ἢ τὴν Ἐπικούρειόν τε καὶ ᾿Αριστοτελικήν ἀλλ᾽ όσα εἴοηται παρ᾽ ἐκάστῃ τῶν αἰρέσεων τούτων καλῶς (δικαιοσύνην μέτ᾽ εὐσεβοῦς ἐπιστήμης διδάσκοντα), τοῦτο σύμπαν τὸ ἐκκλεκτικὸν Φιλοσοφίαν φημί."

L'auteur est M. Jacques Matter, homme de lettres, demenrant

à Strasbourg, département du Bas-Rhin.

Le sujet de l'autre prix était la question suivante :

"Quels sont, parmi les ouvrages des auciens philosophes grecs, et en particulier parmi les ouvrages d'Aristote, ceux dont la connaissance a été répandue en Occident par les Arabes?

"A quelle époque, par quelles voics, cette communication a-t-

elle eu lieu pour la piemière fois?

"Quelle modification a-t-elle apportée à la philosophie scholustique?"

L'Académie a décerné le prix au Mémoire enregistré sous le

nº 1, et qui a pour épigraphe ce passage de Roger Bacon:

"Quatuoi sunt maxima comprehendendæ veritatis offendicula, quæ omnem quemcunque sapientem impediunt et vix aliquem permittunt ad verum titulum sapientiæ pervenire, vid. fragilis et indignæ auctoritatis exemplum, consuetudinis diuturnitas, vulgi sensus imperiti, et propriæ ignorantiæ occultatio cum ostentatione sapientiæ apparentis."

L'auteur est M. Amable Jourdain, Secrétaire-adjoint de l'Ecole

royale des langues orientales.

L'Académie Royale des Inscriptions et Belles-Lettres renouvelle l'annonce qu'elle fit l'année dernière du sujet du prix qu'elle adjugera dans la séance publique du mois de Juillet 1818. Elle avait proposé de l'assembler ce que les monumens de tout genre peuvent fournir concernant les "Annales des Lagides, ou la Chronologie des rois d'Egypte, depuis la mort d'Alexandre-le-Grand jusqu'à l'asservissement de ce pays par les Romams, après la mort de Cléopâtre, fille de Ptolémée-Aulète."

"L'Académie desire qu'on rapporte à leurs dates tous les faits de

cette histoire qui ont une époque certaine; et qu'on détermine, autant qu'il sera possible, la date de l'avènement de chaque prince au trône, et de la fin de chaque règne."

Le prix sera une médaille d'or de la valeur de 1500 fr.

Les ouvrages envoyés au concours devront être écrits en français ou en latin, et ne seront reçus que jusqu'au 1er Avril 1818.

Ce terme est de rigueur.

L'Académie Royale des Inscriptions et Belles-Lettres propose pour sujet d'un autre prix qu'elle adjugera dans la séance du mois de Juillet 1819, de "rechercher quelles étaient dans les diverses villes de la Grèce, et particulièrement à Athènes, les différentes fêtes de Bacchus; de fixer le nombre de ces fêtes, et d'indiquer les lieux situés, soit dans la ville, soit hors de la ville où elles étaient célébrées, et les diverses époques de l'année auxquelles elles appartenaient; de distinguer les rites particuliers à chacune de ces fêtes, et de déterminer spécialement ceux qui faisaient partie des cérémonies mystiques."

Le prix sera une médaille d'or de la valeur de 1500 fr.

Les ouvrages envoyés au concours devront être écrits en français ou en latin, et ne seront reçus que jusqu'au 1er Avril 1819.

Ce terme est de rigueur.

Ils devront être adressés francs de port, au secrétariat de l'Institut, avant le terme prescrit, et porter chacun une épigraphe ou devise, qui sera répétée dans un billet cacheté joint au Mémoire, et contenant le nom de l'auteur.

Les concurrens sont prévenus que l'Académie ne rendra aucun des ouvrages qui auront été envoyés au concours; mais les auteurs auront la liberté d'en faire prendre des copies, s'ils en ont besoin.

NOTES TO CORRESPONDENTS.

If any of our Readers should know the residence or address of any of the descendants of Maittaire, we shall feel greatly obliged for information. We wish particularly to ascertain whether he left behind him a collection of Letters from the Duke of Rutland, containing Critical Observations on Classical Authors, &c.

We shall give Professor Dunbar's dissertation on the particle and in our next.

We received No. 11. of Miscellanea Clussica too late for this Number.

The Account of Classical Mss. &c. will appear in our next.

M.'s reply to Mr. Bellamy came too late for insertion.

We consider the expression, which is the object of P. M.'s inquiry, as elliptical: in the first clause homo is understood with nemo, and in the second it is the nom. to laudet. A similar form occurs in Cic de Orat. iii. 14. Nemo extulit eum verbis, qui ita dixisset,— sed contemsit eum.

We do not think H. E.'s specimen of English Sapplies calculated to make our readers admire that metre in our language.

The article on Plutarch in our next.

Corrections in the Translation of St. John in our next.

While we acknowledge our obligation to Mr. C., whose favors we shall be glad to receive, we must decline the insertion of the Collation, as we find that the edition of Matthai is not scarce in this country.

On s'empressera de donner l'article de M. N. sur la *Littérature* Greeque dans le No. prochain. Le retard n'en est nullement volontaire.

Several other articles are received, to which due attention will be paid.

THIS DAY IS PUBLISHED,

In Octavo, with the Plates separate in Folio, 11.8s.

TOPOGRAPHY

ILLUSTRATIVE OF THE BATTLE OF PLATZEA

Consisting of Plans of the Plain and City of Platæa, of Plans of Eleuthera, Anoe, and Phyle, and a View of Eleuthera, from Drawings made on the spot, by T. Allason, and engraved by Cooke.

ACCOMPANIED BY MEMOIRS

Read to the Academy of Inscriptions and Belles Lettres of the Institute of France.

By JOHN SPENCER STANHOPE, F. R. S. And Acad. Inscrip. and Bell. Lett. Instit. Paris. Corresp. Printed for JOHN MURRAY, Albemarle-Street.

THE

CLASSICAL JOURNAL.

NO. XXXII.

DECEMBER, 1817.

REMARKS ON

The Similarity of Worship that prevailed in different Parts of the Pagan World.

: מרוים ארוים Gen. xiii. 8.

No. 1v.-[Continued from No. XXIX. p. 94.]

Divination, which so universally prevailed, we shall discover strong traces of it, even in the writings of Moses. Although divination, in the state in which we find it in idolatrous Egypt, forms no part either of the Jewish history or ritual, yet there undeniably exist parts of Holy Scripture, which are referrible to this current of popular opinion: the whole account of the water of jealousy, in the 5th chapter of Numbers, the different instances of casting lots throughout the sacred volume, and the manner in which the Urim and Thummim are supposed to have revealed the Divine will, besides others, that might be adduced, most satisfactorily demonstrate, that the ceremonies of the Mosaic law were rather rites

NO. XXXII. Cl. Jl.

VOL. XVI.

 \mathbf{P} :

purified from vulgar errors, than ordinances absolutely new. The rabbinical Jews, indeed, ever debased in their intellectual researches, were as prone to a superstitious divination, as the nations whom they reprobate: to them certain days and seasons (the eclipse of the moon, and various contingent circumstances,) were inauspicious; they believed the gates of Heaven to be closed every night, and evil spirits to be then endued with miraculous powers; on the contrary, they accounted the cock an auspicious bird, who warned them of the approach of morn, when the infernal authorities were deprived of their sway. Hence, in Reshith Chachemah we read: לילוד ליכוד לוברון בין יום ובין ליכוד ליכוד

Yet, though they thus bless God, they scruple not to offer the cock in expiation for their own sins, saying at every blow, זה הליפתי זה תחתי זה כפרתי זה התרנגול ילך למיתה ואני אלך לחיים מובים עם כל ישראל אמו

and notwithstanding this, because he thus bears the sins of a man, the Talmudists dignify him with the name of גבר: also, on the new moon in some months, some of them keep a festival for two successive days, others only for one, and others yet for a longer time; but, with respect to the majority of their superstitions, all very nearly accord. Although we find no such particular regard to omens, as is discernible among the ancient Romans, 2 yet divination formed an essential feature in the Druidical creed; with them the haruspices, and sortilegists, were indispensably requisite in the the transaction of every affair of moment, from whence the Druids themselves were sometimes called hadredd, i. e. adders; and pheryllt, teachers of curious arts and sciences, metallurgy, &c. Thus Pliny observes, " Britannia hodie eam (Magiam) attorité celebrat tantis cæremoniis, ut eam Persis dedisse videri possit." Tacitus also records of the Germans: "Auspicia, sortesque, ut qui maximè observant sortium consuetudo simplex; virgam frugiferæ arbori decisam, in surculos amputant, eosque rotis quibusdam discretos, super candidam vestem temerè ac fortuitò spargunt:

^{&#}x27;A'man offers a cock, a woman a hen, a pregnant woman a cock and a'fiet, '&c. &c. See the Muhhammedan accounts of the angelic cock in the first: Heaven, the representative of all cocks material and immaterial.

² Cicero de Divinatione.

mox, si publicè consulatur, sacerdos civitatis, sin privatim, insé. pater familie precatus deos, cœlumque suspiciens, ter singulos tollit, sublatos secundum impressam ante notam interpretatur." Herodotus mentions the divining lots amongst the Scythians, and Ammisnus Marcellinus those used by the Alani. Mr. Maurice, and others, have likewise largely written concerning the Anguinum of the Druids, which Pliny thus describes: " Prætered est ovorum genus in magna Galliarum fama omissum Græcis. Angues innumeri æstate convoluti, salivis faucium corporumque squamis glomerantur; Anguinum appellatur. Druidæ sibilis id dicunt in sublime jactari, sagoque oportere intercipi, ne tellurem attingat. Profugere raptorem equo: serpentes enim insequi, donec arcentur amnis alicujus interventu." Among the Bardic remains are several little poems called GWARCHANAU charms or talismans, or GORCHANAU incantations, which names clearly bear allusion to this fruitful branch of idolatry. Diodorus Siculus says of these people, μάλιστα δ' ότων περί τινών μεγάλων επισκέπτωνται, παράδοξον και άπιστον έχουσι νόμιμον άνθρωπον γάρ κατασπείσαντες, τύπτουσι μαχαίρα, κατά τὸν ὑπερ τὸ διάφραγμα τόπον καὶ πεσόντος τοῦ πληγέντος ἐκ τῆς πτωσέως καὶ τοῦ σπαραγμού των μελών, έτι δε της του αίματος ρυσέως το μελλον νόουσι. παλαιά τινι και πολυχρονίφ παρατήσει περί τουτών πεπιστευχότες. But, in Strabo's manner of relating it, there appears a trivial difference. Yet, although great was the attachment of the Druids to divination, it is absolutely impossible that they could exceed the nations of the East; for divination is the offspring of superstition, cradled by the wretched priestcrast of oriental climates, being the worthy profession of those oracular impostors, whose sole employment it was to embody the wild horrors of Niebuhr relates the juggles and frauds practised by Santon's, Derveeshes, and others; and Pietro della Valle gives an entertaining history of the جكّر ما or liver-eatess. Hence is it, that talismans and afnulets are eagerly purchased by the fanatic herd, to secure them from the real or imaginary calamities of life, and to invest them with a subaltern species of magic power. Many, however, of these are simply verses from the Koraun, written either. in the common character; or in cabbalistical letters; some are tufts made from sea-cows' hair,—water poured from a shell on earth ta.ken from a dead man's grave,—small beads,—magic knots,—ligatures fastened round the arm, --- spherical pieces of wood, &c. -- a composition of human bones, or dirty rags, &c.—with many others too numerous to name, which have the peculiar properties of effecting a reconciliation among enemies, of defending from murder, fascination, insanity, and the maladies incident to human life; also from sorcery, more especially from that species called چشم زحم, or fascinating eyes, such as those of the جگر خار from all kinds of evil, the bites of serpents, &c.; while some of another species are used to cure love, to gain the affections of a lover, to keep husbands and wives faithful, -some, to prevent conception, ad femora mulierum alligantur, others to cause it. Many of these are suspended about the necks of camels and horses, for various purposes; and of all طلسم is, perhaps, the most famous, being an amulet bearing on it an infinity of magical or mystical characters under a certain horoscope, which will avail against all calamity and fascination, and preserve every treasure, with which it is buried for

purposes of concealment. Of a similar nature is sorthe science of sand, which, in addition to other properties, confers prophecy on its possessors. It is a matter of surprise, that these absurdities should have acquired such extent; especially as Muhhammed continually inveighed against the idols and superstitious practices of the Pagan Arabs. In Sura, v. 4. we find this

precept, respecting their divining arrows, وان تستقسموا بالإزلام of which Sale in his preface has given a minute account, and of which Jellal'oddeen records these particulars:

كانت سبعة عند سادة ال كعبة عليها اعلام و كانوا يحيونها فإن امر تهم ايتمروا بإن تهتهم التهوا:

which is very similar to the Rabbinical accounts of the Urim and Thummim. This superstition of divining arrows, doubtless, prevailed over all the East; the prophet Ezekiel has poetically mentioned their use at Babylon, in his axist chap. 21. 22. and Isaiah has continual allusions to the abominations which we have cited. Even Muhhammed, who affected to censure his unconverted coun-

trymen, was not incredulous, as appears from the fable of the Jew Loberd and his daughter. Originally, these absurdities seem merely. to have been prayers and religious duties, metamorphosed by enthusiasts and sectagogues into amulets, charms, and all the monstrous imagery of credulity. Even TERMOOR, the great and un-

conquered, wrote a treatise on شكون or omens, and in the Persian translation of the Tuzuk, we read, that when one of his mistresses was indisposed,

دوازده سید دعاکوب جمع آمده یک سال از عمر خود بوب

بعشیدند ووب صحت یانت و دوازده سال زندگانی کرد

Many of these impostors acquire their livelihood by these practices. The Malays, to this day, yield not in fanaticism to the Arabs, or the ancient Druids; the Chaldmans and Egyptians encouraged occult sciences, as much as possible; and the Hindoos (as may be seen from Mr. Ward's work on their religion and manners) perhaps exceed every nation on earth in superstition:--for instance, the amulet which Koushulya is represented, in the Ramayana, to have bound on Rama's right hand, defended him more efficaciously, than other mantras, from the evil power of the Rakk-The wonderful fables of Odin's magic, the prophetic powers of the Runic characters, and the magic rings of the Samothracians, are all referrible to the same school. The magical book, also, of the Tau-tsë sect, in China, their various sacrifices to spirits, accompanied with extraordinary ceremonies, shew, that at one time, perhaps, there existed not a nation on earth, that was free, altogether, from these and the like fanatical rites.

Diodorus Siculus, speaking of the Hyperborean island, ev rois αντιπεράν της Κελτίκης τόποις κατά τον 'Ωκέανον, in which Apollo was considered to be the chief deity,—in which were many bards, (Κιθαρισταί,) and circular temples, (σφαιροειδή τῷ σχήματι,) observes, έχειν δε τους Υπερβορέους Ιδιάν τινα διάλεκτον, και πρός τους Ελληνας οίκειότατα διακείσθαι· and from the ceremonies performed at the vernal equinox, mentioned in the sequel, there can be no difficulty in discovering this Hyperborean island. I conceive, -that by ίδιάν τινα διάλεκτον, Diodorus implies, that our Druids possessed a sacred language; but, whether my interpretation be cor-

rect, let the following observations determine. The affectation of a particular "holy tongue," seems to have been very general; and although, indeed, the common people among the Jews spoke the same language as the high priest and Levites, yet there is no reason for doubting, that they possessed much information, which they withheld from the lower orders. However, from Cæsar, it has been urged, that the Druids were ignorant of the use of letters,1 and Mr. E. Williams observes, that, before letters were in use among them, they had a wonderful art of assisting the memory, by which art they preserved their traditions. Now, whether the language was preserved orally or by writing, that "wonderful art" may atill have been the medium by which the bardic theology has been transmitted to our day; and the secrecy of the Druids, which originated from the same motive, which induced the ancient Egyptians to conceal their knowledge under symbols and hieroglyphics, may have inclined this order to reject the use of letters, and adopt some other plan of recording their "memorabilia." General Vallancey remarks, that the Irish Druids marked cycles on rough stones, as Abraham was said to have done, that there were rude pillars inscribed with Ogham, or sacred characters, which none but Druids could read, (which seems to contradict the authority of Cæsar); and Mr. E. Williams supports the General, by averring large stones to have been found in Cardigan bay, with inscriptions in the Roman character, but in some unknown language. Most of those inscriptions which occur in Meyrick's History of Cardiganshire, are either Runic or Latiu, in Anglo-Saxon characters. General Vallancey adds, "There is great reason to think that they had three alphabets at one time, the Phœnician, Pelasgian, and Ogham or mysterious; the last word, Sir Wm. Jones has informed us, is Sanscrit, and used by the Brahmins in that sense." Pausavias, in his tenth book, instances several ancient hymns among the Greeks, "those original Doric hymns, (as Bryant writes,) which were universally sung in their Prutaneia and temples. These were in the ancient Ammonian language, and said to have been introduced by Pagasus, Agyieus, and Olen. This last some represent as a Lycian, others as a Hyperborean, and by many he was deemed an Egyptian. They were

[!] The probability is, that the Druids concealed their use of letters; Muhbammed, for instance, was called the illiterate prophet, although the contrary might easily be substantiated.

in different Parts of the Pagan World. 211

chanted by the Purcones, or priests of the Sun, and by the female hierophants, of whom the chief upon record were Phaennis, Phaemonoë, and Bao: the last of these mentions Olen as the inventor of verse, and the most ancient priest of Phaebus." On referring carefully to Pausanias, I have been unable to discover Bryant's authority for calling this language "Ammonian:" the same indisputably learned, although too fanciful writer, conceives, that many old hymns were preserved in the oracular temples, and long retained and sung, when their meaning was imperfectly known. From the hymns ascribed to Homer, and inserted in the Oxford editions of the Odyssey, it is evident that the priests of Delos had hymns in many tongues, and that the priestesses were able to imitate the speech of many people:

 Πάντων δ' ἀνθρώπων φωνὰς καὶ Κομβαλίαστυν μιμεῖσθ' ἴσασι· φαίης δέ κεν αὐτὸς, ἔκαστον φθέγγεσθ', οὖτφ σφι καλὴ συνάρηρεν ἀοιδή.

Onomacritus is also said to have copied some sacred hymns in Pieria, which Bryant calls translations from ancient Orphic poetry, written in the original "Ammonian" language; and he thus particularises his meaning: "The Helladians.....were of the race which I term 'Ammonian,' and came from Egypt and Syria, but originally from Babylonia. They came under various titles, all taken from the religion which they professed." From whence, it would not be difficult to show, that his "Ammonian language" must have been a language cognate with the ancient Sanskrita. Pelloutier, speaking of the Celts, observes, that their prayers were hymns, "On a Vu encore, que ces hymnes se chantaient au son des instrumens, and avec divers mouvemens du corps, de manière que chaque cantique avait non seulement son air, mais même sa danse particulière." Brotier remarks, "Omnibus retro sæculis, et apud barbaras omnes gentes, ut ex Americæ populis nobis adhuc compertum, idem fuit carminum usus," &c. Tacitus, also, says of the Germans: "Sunt illis hæc quoque carmina, quorum relatu, quem BABDITUM vocant, accendunt animos, futuræque pugnæ fortunam ipso cantu augurantur; terrent enim, trepidantve, prout si-Nec tam voces illa, quam virtutis concentus videntur: adfectantur præcipue asperitas soni, et fractum murmur, objectis ad os scatis, quo plenior et gravior vox repercussa intumescat."

Mr. Davies, the author of the Celtic Mythology, is of opinion,

212 Remarks on the Similarity of. Worship

that the Britons, also, anciently had certain mystic poems, composed in some dialect of Asia: accordingly, we find a foreign prayer in the Myvyrian Archæology:

Gwawd Lludd y Mawr.

Kathl goreu gogant, Wyth nifer nodant;

O Brithi, Brithoi,
Nuoes nuedi;
Brithi, Brithanai, (al. leg. Brithanhai)
Sychedi, edi euroi! &c. &c.

the translation of which may be found in the Celtic Mythology; of which this is the final part;—" On the day of the Sun, there truly assemble five ships, and five hundred of those that make supplication, O Brithi, Brithoi, &c.—O son of the compacted wood! the shock overtakes me; we all attend upon Adonai, in the area of Pumpai." These four lines belong to no Celtic or Gothic dialect; and Mr. Faber has concluded them to be Hebrew, according to the following specimen:

הוי בריתי ברית היא נוח: עץ נוח ערי ברית ברית אני סוד ערי עדי הוא רעי:

Sir Wm. Drummond, in Class. Journ. No. xxvi. p. 421, gives a far more ingenious version:

הו בריתי ברית עי נהה עץ נוה ערי בריתי ברית אני סך עדי עדי זהו רעי:

Monboddo well remarks, that in judging of the affinity of languages, we are but little to regard the vowels, and lag all our stress upon the consonants: perhaps, indeed, there may be other tongues to the which these lines are referrible; but, from the similarity of religious rites, and from the strong authorities which I have elsewhere cited. I am inclined to suppose that these words rather belong to the Sanskrita, than to the Hebrew tongue; nor need it be a matter of surprise that they have been pronounced Hebrew or

Phænician, when it is recollected, that an immense number of Chaldee roots are to be found in the Sanskrit lists of Dhatros. Prithu-Raja is a direct Sanskrit translation of Hu Gadarn; and in the Magadhi, and several colloquial dialects, B is pronounced P, and. as may be seen in Stephanus, Therranky was used by old writers for Berravixy:—now, on a reference to Captain Wilford's luminous essays, we find that Prithu-Raja was a well-known name in Indian story, and by collating the coinciding points, the correspondence, or rather identity of character, is undeniable:—indeed, Prithit was a form of Vishnu, produced by churning Vena's right arm after his death; who, likewise, afterwards married a form of Lakshmi, and, to finish the whole, Captain Wilford identifies him with Noah. This prayer, it may naturally be imagined, must have some connexion with "the open procession," mentioned at the beginning of the verses, and the ceremony seems to accord with those of Osiris, Isis, and Horus, of Bhawanee and Jagannatha, and the like. Adonai forms no singularity in this piece, since we may discover a variety of Hebrew words in the Bardic remains; and the demi-Christian bards affected to display all that they had learned from the Christians; and as it is well known how great was the enmity that prevailed between them and the Church of Rome, Taliesin boasts, that his lore, as well as theirs, was detailed in Hebraic, which will satisfactorily account for Hebrew terms occurring in Celtic writings. Conceiving, then, these verses to be Sanskrit, I thus translate them, in connexion with the preceding: "On the day of the Sun, there truly assemble five ships, and five hundred of those who make supplication; Io! Mighty One! (Hu Gadarn!) come, thou Mighty One!" In our ships be thou conducted! Mighty One! Mighty One! do thou guide (steer) us; be thou our friend, and be our pilot!" which 2 seems in perfect unison with the ceremony of the procession of Osiris gubernator mundi, with which that of Hu Gadarn corresponded. Thus does it appear, that the idia diantertos of Diodorus Siculus signified a sacred language used by the Druids.

MANUSCRIPTS, BIBLICAL, CLASSICAL, AND BIBLICOORIENTAL.—No viii.

** We have made arrangements for collecting an account of all manuscripts on the foregoing departments of Literature, which at present exist in the various Public Libraries in Great Britain. We shall continue them till finished, when an Index will be given of the whole. We shall then collect an account of the Manuscripts in the Royal and Imperial Libraries on the Continent.

THE late Marquis of Lansdowne's Collection of MSS. formed, it is well known, one of the best private collections in the kingdom. They had been procured by the assiduity of two eminent collectors, Mr. James West, and Mr. Ph. Carteret Webb, and relate principally to the laws, government, topography, and civil history of England and Ireland. Mr. West's comprehends 115 vols. in fol. of the Cecil state papers, with some others which have been little known, and are very curious. They also contain Bishop Kennet's historical papers; together with surveys of counties, heraldical collections, with many original and valuable registers of abbeys, &c. Mr. Webb's collections contain papers relating to the history of Parhament, and the revenue of the Chancery, Exchequer, Treasury, Spiritual and Admiralty courts, Wards and Livery, Star-chamber, &c. They also comprehend 30 volumes of the papers of Sir Julius Cæsar, Judge of the Admiralty in Queen Elizabeth's reign, and Master of the Rolls in James I. and Charles I.; and from these, it is said, may be obtained an almost entire history of the finances of those reigns.

Besides these two collections, the Lansdowne MSS. contain many valuable articles that were copied from the records in the Tower, and from those which had belonged to that well-known collector of our old English histories and records, Sir Robert Cotton. From among these we have selected the few articles which seemed most to relate to our department of Classical and Oriental Ilterature, in connexion with our xxviith Number of the Classical

Journal.

878. Cicero de Inventione Rhetorica, libri ii. This treatise of Cicero's, so remarkable for method and perspicuity, is here written in a hand of as remarkable elegance and correctness. It is a

small octavo, written in the fifteenth century, on vellum, with.

initials painted and illuminated.

279. Cicero de Officiis, libri iii. This MS. is of the same pariod, but more abbreviated, and not so well executed in point-of correctness. Its system of pointing too is somewhat different. It is a small quarto, written on vellum.

880. Writers on husbandry, Columella, Xenophon, Cato de Re Rustica. In folio, written on vellum: of the fifteenth century. Xenophon is not in Greek; and the treatise, indeed, is rather something in Latin, formed on the Œconomics of Xenophon. Disserta-

tion or Dialogue of Xenophon.

381. Codex vetus Virgilii Maronis, made from a MS. in the Vatican, so as to preserve the ancient shape of the letters, and accompanied with curious paintings, exhibiting the subjects of the verses as here extracted from different parts of Virgil. It is in quarto, and has this title, "P. Virgilii Maronis Opera que supersunt ab Antiquo Codice Vaticano ad priscam Literarum et Imaginum Formam descripta in Bibliotheca Eminentissimi Camilli Maximi Cardinalis." An. MDCLXXVII. The original MS. was very ancient.

882. A MS. of the entire works of Virgil, comprehending the Æneid, the Georgics, and Bucolics, in folio, of the fifteenth cen-

tury.

883. Horatii Epistolæ, Sermones et Carmina, una cum Juvenalis et Persii Satyris, on vellum, of the 15th century. This is a fine MS. in quarto, and has something rather curious attached to its history: it formerly belonged to Mathias Corvinus, king of Hungary. It contains some curious and rather strange readings;

Nunquam dimoveas ut nave Caprea—Quod si me Liricis inseres vocibus. Feriam sidera sublimi vertice.

This MS. also came into the possession of the celebrated Dr. Taylor, who left it, with many more, to Dr. Askew.

884. Martialis Épigrammata, written in a neat Italic character,

on vellum, of about the fifteenth century.

885. Suetonii Opera: an elegantly written MS. on vellum,

painted and illuminated, of about the same period.

288. A. M. Boëtii Severini Opera omnia: fol. 2 vols. on vellum, richly illuminated, and very neatly written, of about the fifteenth or sixteenth century. It is supposed these two beautiful volumes, as well as some of the preceding, formerly belonged to the Madicean family at Florence.

1292. Les vrais Clavicules du Roi Salomon, par Armodel, 4to. It also contains le Livre d'Or, which relates to the virtues and characters of the Psalms of David, in French, but with Latin mottoes. The Psalms and Athanasian Creed are here converted into

charms; for it is a book of magic. There is nothing of science in it; and it shows of what trumpery the ancient magic consisted.

1293. Les véritables Clavicules du Roi Salomon; another MS, in the style and character of the preceding, though the penmanship is better executed: and he who can take in and digest the Discours Préliminaire, being Solomon's Dedication to his son Roboam, may easily take in the rest. We are informed, at the beginning of this manuscript, that it was translated from Hebrew into Latin by the Rabbin Aboghazar.

1115. Chronicon Mundi ab Adamo ad Jesum Christum: an ancient, and very curious roll, illuminated, well written, and well preserved, but, in some parts, of no greater authority than the preceding book, on magic. Whence is derived the knowledge of the following, which is delivered as an undisputed fact, we know not: Beata Virgo Maria Mater Domini x11 annorum erat, quando conceptus fuit Dominus per Spiritum, together with other minutenesses concerning the day of Christ's birth, &c.

1301. Continuata Series et Hist. Omnium Germanorum Imperatorum, necnon Tyrannorum qui Imperium Romanum occupare conati sunt, per Octavium de Strada Martuanum: a somewhat more modern MS. than the former, and not of such exquisite pen-

manship, but very useful for those who attend to medals.

1294. Cabalistarum Dogmata: a very modern MS. consisting of extracts from that singular and extraordinary man, John Pic de

Mirandula, Latin and French, with a copious Index.

The Lansdowne collection did contain several curious Chinese MSS. together with original drawings of fruits and flowers, with views of the interior of China, its costume, manners, customs, and trades; all done by the first artists of the country: it does not appear, however, that they were lodged in the British Museum; nor, indeed, would they have much concerned our department of Classical and Biblico-Oriental MSS.

On reading the above article, the reader will perceive (by consulting the 27th Number of the Classical Journal,) that it has not appeared in its due order; and it may be proper to account for the delay, so that it may be understood, that it has proceeded from no neglect, either in the writer or publisher. When the gentleman, who undertook to give an account of the Classical and Biblico-Oriental MSS. in the British Museum, found it necessary, through other engagements, to relinquish this undertaking, the present writer was engaged to complete the work, by giving an account of the Cottonian and Lansdowne MSS. which related to this subject: and this part, so far as the order of time is concerned, was duly performed. His copy was sent, with one or two books, to the publisher, to be inserted in the regular succession: but whether

through want of faithfulness in the person by whom the parcel was sent, or by the parcel being mislaid at the printing-office, it was never received by the publisher. So while the writer, being at a distance, thought the publisher had his reasons for delaying to insert his account, the publisher was ascribing delay to the writer; but from the above true statement, it will appear that neither was in fault.

The writer, having thus, amidst illness and some hurry, imperfectly re-executed what he engaged to perform, doubts not that this article will henceforth proceed regularly.

Scip. i. 12.:—"Ipsum autem Liberum. Patrem Orphaici νοῦν υλικόν suspicantar intelligi, qui ab iilo individao natus en singulos ipse dividitur: ideo in illorum sacris traditur Titanio furore in membra discerptus, et frastis sepultis rursus unus et integer emersisse; quia νοῦς, quem diximus mentem vocari, ex individuo præbendo se dividendum, et rursus ex diviso ad individuum revertendo et mundi implet officia, et nature sum arcana upu deserit."

scripta est ab Onomacrito, de quo ita Tatian. (p. 138. ed. Worth.): 'Θρφως δε κωτά τον αυτόν χρόνον 'Ηρακλεϊ γόγονεν, άλλως τε και τὰ εἰς κοντετάχθαι, γενομένου κατά την των Πεισιστρατιδών άγχην, περί την πεγτηκοστην 'Ολυμπιάδα. Est ergo idem, ad quem scribit Theognis (v. 503.),

Οἰνοβαρῶ κεφαλήν, 'Ονομάκριτε, καί με βιᾶται

Olvoc.

Nam temporibus Xernis illa gnomica scribebat, aut certe circiter adventum Medorum et Mardonii sub Dario Hystaspis, ut ipse ostendit, cum ait (v. 762.),

Μηδέν τον Μήδων δειδιότες πόλεμον.

De Onomacrito vide Herod. vi. Extat præstantissimum fragmentum Orphei de vero Deo Hebræorum, ex quo hos pauculos versiculos excerpsimus, qui ad antiquitatem historiæ sacræ pertinent. Totum fragmentum qui legere volet, et cum voluptate, et cum fructu id fecerit." Scaliger l. c. p. 47. De hoc insigni loco silent Theognidis editores, Brunckius, Gaisfordius, Bekker, et Schaefer. In præfatione Fr. Sylburgii, nuper a Gaisfordio et Bekkero repetita, non definitum est, quod mirum, quibus temporibus gnomica sua scriberet poeta. "'Thoyevis, ita olim correximus in Fragmentis Orphei, quæ vir eruditissimus, amicus noster, H. Stephanus edidit A. 1573. Et ita emendate rursum excusum undecim annis post in edit. Theognidis et versuum Pythagoræ. Antea inepte legebatur ύλογενής. Est igitur ύδογενής, Aquigena, h. e. Moses ex aquis tanquam natalibus extractus. Nam verbum TVD est Extrahere, ἀνασπᾶσαι, ΠΨΟ ἀνασπαστός: non autem quod Μώς Aquam Ægyptiis sonarct, ut nugatur Philo Judæus Έλληνιστής, et Hebraismi penitus imperitus. Josephus vero amplius largitur. "Compositum enim ex Mô, Aqua, et vons, Extractus ex aqua, unde coaluerit nomen solidum Mwvojs. Alii dicunt Mwv Syriace esse aquam. Denique hinc fluxit dici Μωΰσην, potius quam Μωσην, quod rectum Ezekiel Tragicus: erat.

> *Ονομα δε Μωσῆν ἀνόμαζε, τοῦ χάριν *Υγρᾶς ἀνεῖλε ποταμίας ἀπ' ἡϊόνος.

Videtur simpliciter a verbo derivare, ut ratio postulat, non ab aquis. [Vide Jablonskii Glossav. Vocc. Æg. in Novo Thes. Steph. Pt. in p. ccxli. a, et Styrz. de Dial. Macede et Alex. ibid. Pt. i. p. clxxiv. a.] Recte igitur olim ύδογενής pro ύλογενής. Sed mirum, unter horum notitia Orpheo, aut Onomacrito. Vetustissi-kum autom mendum hoc esse non dubito, ut ύλογενής pro ύδογενής legenstur." Scaliger, l. c.

SIMONIDIS Fragm. CXXXVIII. "Schol. Homer. Il. N. 103.:

"Hia, βράματα, οὐ τα ἐν οίκφ δὲ ἐσθιόμενα, ἀλλά σὰ ἐν ἐδῷ.

. Δεύτε φίλοι, ήτα φερώμεθα,

Espanions ones. Schol. Ven. ospolasota. Sed Schol. hallucinari videtur. Verba Homeri sunt Od. B. 410." Gaisford. Mira est hic negligentia, tanto estitore indigna: nam in Schol. Ven. B. quidem

legitur pegolpes da, sed in Schol. Ven. A. est pepigusta.

SIMONIDIS Fragm. clanvisi. "Argum. Eurip. Med. Φερεκύδης δὲ καὶ Σιμωνίδης φασὶν, ὡς ἡ Μήδεια ἀφεψήσασα τὸν Ἰάσονα, νέον
ποιήσειε. Vide Schol. Aristoph. Eq. 1818." Gaisford. Pro
ἀφεψήσασα, quod vel Gaisfordii, vel typographi incurine debetur,
lege * ἀνεψήσασα, (quo verbo caret Schneideri Lex.) τα legitur in
Beckii edit. Mirum est Porsonum τψήσωσα dediase, cum paulo post
sequantur hæc, Αἰσχύλος δ΄ ἐν ταϊς Διονύσου Τρόφοις ἰστορεϊ, τον καὶ
τὰς Διονύσου τροφοὺς μετὰ τῶν ἀνδρῶν αὐτῶν ἐνεψήσωσα, * ἐνεοποίησε.
Notandum est verb. νεοποιέω, quod habet quidem Schneideri Lex.,
sed ἀμαρτύρως. In eodem Argumento occurrit adverb. * γενναιοφρόνως ab adj. * γενναιόφοων. Utrumque vocabulum ignorat Schneider.
Locum hunc citat Jacobs. Anthol. T. vii. p. 221. ubi legitur ἀνεψήσασα—ἐποίησε, male pro vulgato ἀντψ. — ποίησειε.

SIMONIDIS Fr. clavii. "Menander Rhetor p. 31. ed. Heeren. Πεπλασμένοι δὲ, δταν αὐτοὶ σωματοποιώμεν καὶ θεὸν καὶ γονὰς θτῶν ἡ δαιμόνων, ὥσπερ Σιμωνίδης (τὴν) αὖριον δαίμονα κέκληκε, καὶ ἔτεροι τον, καὶ ἔτεροι ἔτερόν τονα." Gaisford. Effugerunt ergo hujus viri docti diligentiam verba Ruhnkenii hæc in Epist. Crit. i. p. 90.——

²⁴ Hesiod. 'E. z. 'H. 803.

'Εν πέμπτη γάρ Φασιν Εριννύας ἀμφιπολεύειν,
"Ορκον τιννυμένας, τον Ερις τέπε πημ' οπιόρκοις.

Hunc locum respexit Menander Rhetor p. 595. Πεπλασμένοι δὲ Τρινοι δταν αὐτοι σωματοποιώμεν και θεὸν, και γονὰς θεών ἡ δαιμόνων, αστιες Σιμωνίδης Αὐριον δαίμονα κέκληκε, και δτερδι "Οκνον. Leg. "Οςκον. Vide Græv. ad h. l. Eodem modo in Oraculo ap. Herod. vi. 3: "Ορκου πάις, Horci filia, dicitur Justitia ultrix, ubi v. Wessel." Gaisfordianus Simonidis Index voce Αύριον caret.

Simonidis Fr. xviii.

' Ως δπόταν χειμέριον κατά μῆνα
Τιτύσκη Ζεύς ἤματα τεσσαρακαίδεκα,
Ααθάνεμόν τε μιν ἄραν
Καλέουσιν ἐπιχθόνιοι, ἱερὰν
Παιδοτρόφον ποικίλας ἀλκυόνος.

" Pro πινόσκη, Ruhnk. Ep. Crit. i. p. 98. corrigit τιτύσκη, ut ap. Aratum Phæn. 418.

Πολλάκι γὰς καὶ τοῦτο νέτφ ἐπὶ σῆμα τιτύσκει Νὸξ αὐτή."

Jacobs. a Gaisfordio allatus. " Equidem πιτύσκη substitui vultigato πινύσκη, quod interpretari non licet commode. Postea Ambr. λάνθανε. τήν μιν διζαν habèt." Schneider. ad Aristot. H. A. v. 8., nescius, ut videtur, ante se, probante Jacobsio, Ruhnkenium sic emendasse. Antimachus ap. Schol. ad Nicandri Ther. 471.

Ηφαίστου πυρὶ εἶχελον, ἢν ρα τιτύσκει Δαίμων ἀκρετάτης ὅρεος κορυΦήσι Μοσύχλου, de quibus versibus vide Editores Novi Thes. Steph. Pt. iii. p.222. n. 2. Ruhnkenii verba sunt hæc:—« H. in Merc. 162.

> Μήτερ εμή, τί με ταυτα τιτύσκεαι, ήὐτε τέκνον Νύπιον.

Emenda mirorxeis. Il. E. 249.

"Ηδη γάρ με καὶ άλλο τεὴ ἐπίνυσσεν ἐφετμή.

Naumachius in Stobæo Grotii p. 317.

Μούνη δ' άφραδέοντα πινυσσέμεν, άλλα κατ' αίσαν. .

Callim. H. in Dian. 152.

Κερδαλέφ μύθω σε, θεή, μάλα τῷδε πινύσκει, ubi v. Spanh. Suidas, ad Homeri locum allatum respiciens, $E\pi i$ νυσεν έντι του διήσειρεν, ubi recte Portum emendare διήγειρεν, intelligitur ex Etym. 122, 33. Πινυτός ό διεγηγορμένος τον νούν. Hesych. Επιγύσκειν διδάσκειν. Scr. Enlyuoxer. idloaoxer, ut sit varians lectio loci Homerici. Contraria labes insedit Simonidis Fragmento ap. Aristot. H. A. v. 9. quod in ordinem redigere constus est Kuster. ad Suid. T. i. p. 116. J. C. Scaliger πρύσχη vertit temperat, Kuster præparat, quem sane miror, cum mentem poetæ pulcre viderit, non vidisse maculam. Leg. haud dubie TITÚGAP. Aratus Phæn. 418. l. c. Nunc conjecturæ meæ v. 162. mukum præfero certissimam conjecturam J. Piersoni ad Mær. p. 119, อียดิ์เฮมะสเ." Quicquid contradicant critici summi, Ruhnk., Jacobs., Schneider, et Gaisford., recte se habet vulgata lectio in Simonidis Fr. πινύσκη, quod verbum egregie explicuit H. Steph. Thes. Gr. L. iii. 418. f. ab illis prætermiseus:—" Πινύσσω et πινύσκω, Moneo, Sapere vel resipere facio, Ad sanam mentem reduco. Suid. πινύσκω exp. πινυτὸν ποιῶ. Quod vero ap. Aristot. l. c. de Alcyone ex Simonide affertur, 'Οπόταν χειμέριον κατά μῆνα πινύσκη Ζευς ήματα τεσσαρακαίδεκα, Gaza sic vertit, 'Quum per mensem hybernum Jupiter bis septem molitur dies temporis.'- Sed et hic mivigrein accipi queat pro σωφρονίζων, ut Jupiter hybernos dies dicatur πινύσκειν, quum cos veluti castigat, et ex asperis ac frigidos flatus spirantibus leniores serenioresque ac tepidiores reddit : quod per alcyonios dies accidere solet, silente etiam ac pacato mari eo tempore."

Gaisfordius post Jacobs. λαθάνεμον pro vulgato λανθάνεμον dedit, aed vellem vir doctus lectoribus suis exposuisset quid valeat voc. λαθάνεμον. "Λανθάνεμον άραν Simonides vocat Tempus, quo silent venti. Gaza vertit Clementiam temporis." H. Steph. Thes. Ind. Ut vertim fateamur, et λαθάνεμον et λανθάνεμον analogise repugnare videos. Sed de his quæstionibus Hermanni nostri sententia expectatio est. Si poeta ληξιάνεμον, a ληξίς, Cessatio, et ἄνεψος, Ventus,

scripsisset, nulla dubitatio nobis inhasisset.

" Democrit, Fragm. Bibl. Gr. vol. iv. p. 335. Θάλασσα μέν

ούν * ἀπογαληνιάται τῆς ἀλκυόνος ἀοῦς ἐπωκζούσης ἐπὶ ἡμόρας-ζ. Vide ibi Rendtorf. p. 349. et Gemmi Elem. Astron. p. 602. ed. Pettei. ubi alkuorlog." Albert. Auctor. Emendd. in Herydd: 1898. 21: Eustath. ad II. 1. p. 1776. 32. "Em lorian de Manamhas liv τῷ κατ' αὐτὸν Λεξικῷ λέγει, ότι άλκυονίδες ἡμέρους αι έν χειμώνι νήναμοι και γαλήνην έχουσαι και ότι περί του αυτών έριθμου διαφέρεται. Σιμωνίδης μεν γάρ πέντε φησίν αυτάς, και Αριστοτέλης. : Δημαγόρας δε ο Σάμιος, έπτε, Φιλέχορος δε, έννέα, ότι δε καί δεκατέσσαρές είσιν, έτεροι λέγουσιν. 'Ο δ' αύτὸς Παυσανίας μῦθον 🗚 αύταϊς καὶ τοῦτόν φησιν 'Αλχυονέως του γίγωντος θυγατέχες, Φθονία, 'Ακθη, Μεθώνη, 'Αλκίππα, Παλλήνη, Δοιμώ, 'Αστερίη. Grammat. S. Germ. in Bekkeri Anecd. Gr. T. i. p. 372. omnino conferendus est: 'Αλκυσγίδες ήμέραι περί του άριθμου διαφέρονται. Σιμανίδης γάρ εν Πεντάθλοις ενδεκά φησιν αστας, και 'Agusτοτέλης εν τοις Πορί Ζώων, (v. Kuster. ad Suid.). E. H. BARKER.

PROLUSIO MERCURIALIS.

Ad amicum præstantiss. item digniss. Præs. Rev. adm. G. B. Episc. Cluniensem.

HABES, Amice ornatissime, dilectissime, quod te severioribus perfuectum officiis paulisper forsitan oblectet. Te itidem novo huic, quale quale sit, argumento judicem primopere idoneum, qui vel semtentiam confirmes, vel errorem redarguas, adhibere aveo. Neve me autem, quamvis latine scribendam judicaverim, rem politius limare posse existumes; scis enim et tute ipse, ut opinor, quam multa per complures jam annos, impedierint quominus literis latinis operam darem.

Cogitanti nuper de notissimi Dei Mercurii indiciis, dotibus, sensu demum mythico, magna mihi incidit suspicio, omnes omuino interpretes apiro quodam consensu in hac re hallucinari. Qualem enim nobis attentant! Quam multiplicem! Quam disparem sibi!

Ede quid illum
Ense putes? Quemvis hominem secum attulit ad nos;
Grammaticus, Rhetor, Geometres, Pictor, Aliptes,
A ugut, Schonobates, Medicus, Magus.
Juv. Sat. 3. v. 74.

Certe Deos Deasque, mythologici quasi dramatis personas, sibinet ipsis penitus congruentes reddere, opus foret cui minime accingor. Unicuique autem praccipuum quoddam esse videtur signumi tat! ze-parrip, quo plerumque oriantur, aut quorsum spectent de iis omnia figmenta. Fas sit jani milii, in re mythologica rudi licet atque inexperto, ut hancce notam vel indicem Mercurialem investigare aggrediar; neve supra modum audacem aut arrogantem putes, si intactum

aliquid, nec usque adhuc excogitatum, depromam.

Illos precipue, et toto prorsus celo errasse mihi quidem videtur, qui, cum Macrobio aliisque, Mercurium colem esse interpretantur. Quot igitur soles? Habemus jampridem Harpocratem, Hyperiana, Adonida, Jovem Ammonem, Liberum Patrem, Osiridem, Isidem vel Orum, aliosque plarimos pro sole nonnunquam usurpatos; liceat igitur furto, ei ipsi proprio, utamur, dum hunc saltem turbæ surripiamus. "At sidus ejus scilicet soli conterminum." Beneque autem contigua dixeris, totidem verbis idem esse negas: vix item stella hæc ob propinquitatem lucida, imo potius obscura, et nimio quasi splendore adumbrata videatur. "Attamen,

Τί Πλειάδεσσι κάμοί;

Τί δ' ἄστρασιν Βοώτεω; Anacr. Od. 17. Quid hic nobis cum astronomica, aliisve, quam de mythologies, aut

poetica tantum agitur?

Mihi quidem placet sententia quanto quanto huic contraria; nec dubitem sane, vel τῶν κριτικῶν βία, per Mercurium, non lucem sed caliginem aut tenebras intelligere. Sol igitur et Mercurius inter se dissimillimi—fratres nimirum sunt proculdubio, nempe Jovis filii, quoniam a Prima Causa tam lux quam tenebræ obortæ—fratres autem diversarum adeo naturarum, ut, Dioscorum more, in eodem loco consistere nequeant.

Primus mihi et præcipuus, inter partes defendendas, testis et mystagogus adeat Horatius, cujus Odes 10. L. 1. ne iota quidem omitagogus adeat Horatius, cujus Odes 10. tere velim-En igitur in medias res me projicio.

Quin et Atridas, duce te, superbos Ilio dives Priamus relicto, Thessalosque ignes et iniqua Trojæ Castra fefellit.

Quid autem? Solisne, cedo, an caliginis ductu, ita latuit ut ignes hosce vigiles, omniumque oculos, et notitiam falleret? Integros jam accedamus fontas; ibique Iridem a Jove missam ita Priamum compellantem audire est.

Λύσμοθαί σ' ἐκέλευσεν 'Ολύμπιος Εκτρρα δίον

Μηδέ τί τοι θάνατος μελέτω φρεσί, μηδέ τι τάρβος, Τοϊος γάρ τοι πόμπος άμ' έψεται 'Αργειφύντης, "Ος σ' άξει είως κεν άγων 'Αχιλής πελάσση.

Sidus Mercuriale ob motus celeritatem nomen sibi vindicat. De quo Minutius Felix (c. 21. P. 108.) "Mercurius alatus, Saturnus, ob cursus tarditatem, impeditis pedibus adhibetur."

Talem, inquit, ducem,—qualem obsecto? Nonne ita intelligenda est fris, "Ego minime tibi comes idonea; aderit autem Mercarius, qui te umbris suis protegat et tutetur?" Brevi itaque Jupiter sic imperat Mercurio:

Βάσκ ίθι, καὶ Πρίαμον κυίλας έπὶ νηας 'Αχαιών 'Ως άγαγ' Δε μήτ' άρ τις 'ί δη, μήτ' άρ τε νοή ση.

Interea Senex, ingruente crepusculo, ad Ili tumulum sistit noctem opperiens; mox illum appropinquans Mercurius clam'omnibus producit, simulque custodibus, haud secus ac τῷ ᾿Αργῷ, oculos obsignaus, somnum ingerit. Nec multo post, reditâs ut meminerit monens, et insdem auspiciis ante solis ortum reducens, sub ipsa aurora evanescit Metcurius;

Ερμείας μεν Επειτ' απέβη πρός μακράν Ολυμπον, Ή Αλος δε κροκόπεπλος εκίδνατο πάσαν επ' αίαν.

—Que omnia minime Soli, apprime autem Noctis Deo consentanea. Poetre jam ulterius auscultemus.

Tu pias lætis animas reponis Sedibus, virgaque levem coerces

Aurea turbam.

Virga sua scilicet præpotenti animas in Orcum deducit; nec profecto magis idoneus excogitari potest δ νεκρόπομπος, quando animæ δηλονότε, quam ipsæ umbræ sint, non per Solis radios iis minime tolerabiles, sed obscure quodammodo, et per tenebras sub Tartara mittantur. Necnon animas interdum ex Orco reducit—ut Virgilius,

Tum virgam capit; hac animas ille evocat Orco

Pallentes:

quippe quas, si unquam rediissent, occulte redire necesse est. Qui igitur Deorum superorum nuncius est, idem inferorum regno incolas suppeditat.

----Nigrique Jovis vacua atria ditat

Mortibus.—

Stat. 2. 49.

Unde merito sane dicatur

Superis Deorum

Gratus, et imis.

De hoc similiter Claudianus,

Commune profundis

Et superis numen, qui fas per limen utrumque Solus habet, geminoque facit commercia mundo.

Utrumque scilicet regrum penetrat, cum utrumque nobis pariter obserum sit, atque abndor.

Jam rtio sese offert wanny and iste,

Callidum quidquid placuit jocoso Condere furto.

Luxne igitur an, tenebræ? dies an nox furto accommodation? Dignus quidem noster qui furum Deus adhibeatur, ut nempe corum latro-

Idem asserit de Nocte ipså Spencerus noster:

For she in hell and heaven had power equally.
F. 2. B. 1. C. 5, St. 34.

cinia et prædationes velamine suo protegat. Caligo omnium quatifur est metaphoricus, aut jocqsus, qui omnia per breve spetium e conspectu amovet, at simul ac "redeunt spectacula mane," redeunt illico τὰ ἀπολωλότα.—Sic enim deinceps Poeta noster:

Te boves olim nisi reddidisses Per dolum amotas, puerum minaci Voce dum terret, viduus pharetra Risit Apollo.

Boves Admeti Thessalize regis ab Apolline custoditas, surripuit Mercurius; hoc est, quæ interdiu securæ erant, noctu vel abstrabebantur, vel errabant. Porro hæc fecisse dicitur dum admodum puer, quia nox, simul ac inducta est, celat omnia. Sic enim Homerus, nescio quo interpretante in Hymn. ad Merc.:

Editus is mane citharam pulsavit eadem

Luce, boves Phæbi celavit vespere raptas.

—Quid tum deinde! Redit jam Sol aut Apollo vultu minaci, boves simul inventæ, sed nec risu abstinuit ille, quum eundem, qui boves amoverat, suam ipsius pharetram, id est, radios suos simili fraude, si libuit, surripere atque occultare, posse intellexit. Omnibus denique quot tetigerat, ut ait Lucianus, ab infantulo illo furcifero furatis atque absconditis, Neptuni scilicet tridente—Martis gladio,—Veneris cestu—Vulcani forcipihus—Apollinis pharetra—Jovis ipsius aceptro—postremo fulmen etiam aggressus ille, hoc subito ardentius esse sensit quam quod digitis conveniret.—Hic nimirum plane hæreremus, atque ista temere omnino et inepte effutiri putaremus, ni mythologicam mentem recte calleamus; dato autem filo, sensus adest aptissimus atque concumissimus, nempe cum alia omnia occultent tenebræ, Jovis tamen fulgura noctem obscurissimam, nubes deusissimas, facillime penetrare et perrumpere.

Alium jam profesamus charactera.

Te canam magni Jovis et Deorum Nuncium.

Bene sane—Deorum enim tam opera quam consilia secreta esse, eorumque mandata invisibili quodam atque oculos fallenti modo absolvi debent. Adde quod noctu per somnia adhiberentur plerumque Deorum τὰ θεοπρόπια. Si autem reliquorum Deorum tum præsertim et quasi κατ' έξοχὴν, nuncius est magni Jovis, cujus stuprationes et adulteria noctis ministerii primopere indigere existumes. Cum emim aliis furtis tum præcipue Yeneris adeo favent tenebræ, ut senex Texentianus adolescentem pæne excusatum habeat, si diceret, Persuasit Nox, Amor, Vinum, Adolescentia. Quapropter forsitan, quod parum olfecere interpretes, Mercurium Veneri adjunxit Horatius noster (Od. 30. L. 1.)

Gratise—tecum—properentque nymphæ, Et parum comis sine te Juventus Mercuriusque.

Jovis igitur nuncius est Mercurius præcipue in re amatoria. Sin allegorium hand penitus inspiceres, codem redit; universe quidem

mechatur Jupiter, at non sine Mercurio, hoc est, vis nafure genera-

'tiva partus suos clam hominibus promovet.

Huc omnino referenda est, unde titulus 'Appendirans, fabula. Io, ut aiunt nonnulli, terra est, Argus cœlum, oculi ejus sidera.—Esto—Jam Mercurius, ut delirant nonnulli, quia Sol est, eximio suo splendore lumina luce extinguit. Vah! commentum futile atque insulsum! Quasi lo, sive terra, sive vacca sit, interdiu minus quani nocte lucida cerneretur! aut quasi nunquam, nisi per solis ortum, obscurari possint sidera! Mirum item in hac re vacillare interpretes, quando aperte asserit Ovidius

—Centumque oculos nox occupat una.

Met. v. 721.

Liceat nostrani jam invicem aptemus interpretationem. Vaccam hanc, Jovis pellicem, non enim hic de terra, sed de pellice agitur, ita suspicatam habuit Juno, ut cam semper coram in oculis retinere cupiens, Argo, id est, cœlo stellato custodiendam tradiderit—Sensus est—Ne nocta abriperetur Vacca, Juno, quæ est aer, noctes semper lucidas aut sidereas intulit—Hoc ægre ferens Jupiter, Mercurium, id est, noctem tenebrosam, nubesque piceas, quibus uxoris spes artesque frustrarentur, inducere curavit.

Ad Odes hujus initium, quod, quasi obscurioris quodammodo interpretationis, huc deferendum judicavi, jam taudem redeundum

est.

Mercuri facunde, nepos Atlantis,
Qui feros cultus hominum recentum
Voce formasti catus, et decoræ

More palæstræ,
Te canam—curvæque lyræ parentem.

Atlantem ipsum,

-Cinctum assidue cui nubibus atris

Piniferum caput, Æn. 4. v. 248.

minime incongruum huic nostro avum esse, nihil jam moror. At
"Eho," inquies, "quid autem de scientiis "Hæ proculdubio luci
magis quam obscuritati adsimilandæ."—Certe, si perfectionem, minime vero si primordium respicias. Nihil prorsus ex seipso origimem ducit; vix enim muudum ex ordine, solem e luce, originem
traxisse dixeris; endem lege nec scientias e doctrina aut lumine, sed
maxime ex ignorantia aut tenebris extitisse atque emicuisse judicaveris.

Flermetem jam attendamus terminalem Harrisianum. Trunce ejus rudi atque infabricato denotantur quasi literarum principia. Hic latent velo mystico obvoluta, scientiarum omnium elementa; velo item amoto eadem panduntur; lux tenebris succedit, adeo ut dectrina ex inscitia, cultus e faritate, eloquentia e balbutie, originem transse videantur. Recte igitur eo nomine Mercurius scientiarum

Abs per transpositionem Hos.

2 Vide Harris's Hermes, p. 325.

aucier videatur; rectè feros hominum recentiorum animos persuasione lumanitatem versus allicuisse, dein musica rhetorica scientifique aliis societates instruxisse, et vitam perpolivisse, necaon paleques decora exercitatione membra formasse dicatur, quandoquidem e tene-

bris primum hæ, omnes effulsere.

Nec unica reddenda est ratio. Novimus ex qualitatibus alias primarias esse, alias secundarias; quod et hic forsitan accommodari potest. E cœlo descendit non Γνῶθι σεαντὰν tantum, sed etiam Γνῶθι ἄπαντα. Quare facillime qui Deorum, unde omnis derivata cognitio, interpres et internuncius est, scientiarum etiam repertor atque conditor habeatur. Primum itaque Deorum nuncius est, quia mandata eorum clam omnibus perficiuntur; dein scientiarum inventor, quia has Deorum nuncium attulisse convenit. En tibi binæ interpretationes, quarum utralibet, ni faltor, ad nodum solvendum sufficiat.

Sin scientiarum auctor sit Mercurius, non ideo iis illum præsidere necesse est; nec cum caligine hoc congrueret. Musices, verbi gratia, patrocinium Apollini donâsse videtur, qu'um lyram illam quam Poeta noster fraternam appellat, largitus est. Male igitur, ut opinor, concentui illi septem planetarum, a quo septem chordas deducit Pythagoras, nonnulli Mercurium præfecere. Spherarum certe Apollo præses est et choregus; idem musices patronus sit, si libet;

nostrum hunc non nisi testudinis inventorem jactitamus,

-Curvæque lyræ parentem.

Habemus igitur Hermetem alipedem, præpetem, velocissimum, enndemque truncatum, informem, immobilem; quæ res merito Criticis injecit scrupulum. Liceat autem ex altera parte Deorum nuncium, ex altera scientiarum quasi fontem reconditum agnoscamus, inde alia liquido sequi. Mercurius alatus est, quia Deorum mandata retardari nequeunt; item per figuram terminalem intelligendum est, scientias in elementis adhuc latentes justa sua atque legitima forma carero. Denique figuram hanc vel ideo obtinere dicas, quod in tenebris evanescant membrorum distinctiones.

Hactenus ex Ode nostra insigni vel propria depromsimus vel extrinsecus aliena ei aptavimus. Omnia item insuper, ni fullor, eodem spectant quotquot alibi reperiuntur indicia; ne autem plus æquo

materiam producam, quod superest paucis expediam.

Quando de furtis jam supra facta est mentio, non adeo mira videbitur forsitan aut intempestiva abbinc in mercaturam transitio; eoque magis dicas quod per Mercurium lucrum præcipue iniquum, celatum, fraudulentum, significaris constat. Quidquid igitur arcani, reconditi, mystici sit in re mercatoria, id illi merito attribuas, qui idem cum a mercibus Mercurius, tum a dolo nonnunquam Dolius nuncupatur. Hinc per "Epherov lucrum inopinatum, præter expectationem oblatum, improvisum intellexerunt veteres.

Alis, ut jam vidimus, petaso, caduceo, talaribus, instructus est Mercurius, non tantum, ut aiunt interpretes, quia Deorum nuncius est, sed etiam quia lucrum, præsertim si inopinatum fuerit, neglectum evolat. Adde jam, si libet, quia Nox ipsa "dea nigris obsita pepuis," omnia circumvolitans terris quasi imminet atque incumbit —quia nempe, perinde ac ovis gallina, sic tam terris quam "ponto Nox incubat atra."

Somni item, quod plane tenebrarum est, adprime artifex et minister haberi potest Mercurius. Non enim somnum ipsum Morpheus, at, ut nomen suum indicat, imagines tantum, phantasmata, rus μορφας, somniantibus admovet. Sic etiam Ovidius

-Simulatoremque figuræ

Morphea.

Bene igitur 'Epµñs ab antiquis pro ultimo potu usurpatus, quod nempe Mercurio ut somni præsidi libarent e cæna surgentes. 1

Hactenus, ut videtur, res bene convenit. Quo antem pacto somnum abstrahere potest Deus ille umbrarum? Ait enim Virgilius (Æn. 4. v. 244.)

Dat somnos adimitque. 2

Dat certe, quomodo autem adimit? At quidni, siquidem ab Horatio Sol diem celare dicitur?

Alme Sol, curru nitido diem qui

Promis et celas. (Carm. Sæc.)

Quemadmodum igitur Sol oriens diem aperit, occidens claudit, ita Mercurius, quum caliginis numen sit, vel noctem, vel somnos noctis

comites, accedens infert, decedens secum abstrahit.

Somnum, ut perhibent auctores, strictum caduceo suo ingerit. Aliud autem mirificæ hujus virgæ officium est quod rixas componat: ea nempe fretus Mercurius, cum serpentes duos præliantes cohibuerat, eos exinde virgæ suæ obvolutos gerebat. Caduceus dicitur, ut aiunt nonnulli, quod cadere faciat contentiones, unde fit ut legati, την είρηνικήν hancee præ se ferentes, caduceatores appellentur. Quid demum hoc caligimi aptius? quid accommodatius? Nox prælia dirimit; interposito scilicet tenebrarum suarum quasi clypeo contentiones acerrimas ulterius progredi vetat. Quod nec in iris præsentibus tantum obtinet, sed et irarum causæ in posterum obligione conduntur.

Proinde de Lyra dicit Poeta noster, (L. 3. Od. 11.) hac fretum Mercurium, tam manes pænis agitatos, quam Cerberum rabie frementem blanditiis suis mulcere posse et delinite.

Cessit immanis tibi blandienti

Japitor aulæ

Cerberus; quamvis futiale centum Muniant angues caput ejus, atque. Spiritus teter, saniesque manet Ore trilingui.

^{&#}x27; Vide Steph. Lex. ad verb. Ερμής.

² Vide etiam Hom. Il. 24, v. 343,—Ov. Met. 2. v. 735,

² Caduceatores pacem, Feciales bellum ferebant.

Quin et Ixion Tytiosque vultu Risit invito: stetit urna paulum Sicca, dum grato Danai puellas Carmine mulces.

Que quidem quid sibi velit fabula usque Criticis in occulto esse constat. Sin calignem intelligas, expeditur nodus—caligo nimirum et somnum et quietem secum afferens, maximos sane poenas rependentium dolores, maximam custodum ferocissimorum vigilantiam tandem aliquando compescit atque exsuperat.

Extremum quod rei fidem faciat argumentum jam exinde proferamus, quod Pan Mercurii filius habeatur; et quandoquidem in eo quod modo notavi, Horatium, ut videtur, illustrasse mihi contigerit,

dabitur hic insuper, ni fallor,

Quanvis haud equidem tali me dignor honore, vel Homeri ipsius defendendi copia! Per Pana nimirum universam naturam designari liquet, cujus ita imaginem pinxerunt veteres ut quidquid in mundo quaquaversum sit in ea osteuderetur. Cornua habet in radiorym solis et cornuum lunæ similitudinem—corpus hispidum propter arbores et virgulta—pedes caprinos terræ soliditatem imitantes;—et reliqua deinceps. Hæc quidem sententia, cui et bene quadrare videtur etymon Panis, ex his Orphei abunde stabilitur:

Πανὰ καλῶ κρατερόν τε θεὸν, κόσμοιο τὸ σύμπαν, Οὐρανὸν, ἡδὲ θάλασσαν, ἰδὲ χθονὰ παμβασιλείαν, Καὶ πῦρ ἀθάνατον· τάδε γὰρ μελῆ ἐστι τὰ Πανόε.

Jam si ortum suum respiciamus, Pana hunc, talis cum sit, fere omnes, Homero duce, interpretes Mercurii filium esse perhibent: ait enim poetarum disertissimus, in Hymu. ad Pan.:

Tepμelao φίλον τόκον ἔννεπε, Μοῦσα.

Nec tamen desiderantur quibus, ob rei inscitiam, minime arrident hæcce generis cunabula, quique multo satius judicant quod vates antiquissimi, et inter primos Memphici, ieροφάντης templi, tradidere, Pana nempe e Chao et Dæmogorgone natum fuisse, noctemque universam partum ejus præcessisse. Euge jam! nonne hi tum maxime nobiscum faciunt, quum în ipsum Homerum vellicandum et exprobrandum se accingunt? Quid enim est Mercurius nisi Chaos illud informe, tenebris penitus involutum et absconditum? Quid insuper Dæmogorgon, nisi vis naturæ generativa ceu vitalis, omnium rerum mater atque altrix, cujus ope Pan a Mercurio, totum videlicet, quod aspicimus, systema mundanum e caligine impenetrabili eliclebatur? En igitur Noctem istam, ante mundi partum, την ἀνήλιον, ο opacissimam, universam? cui autem luminis aliquantulum vel ideo inferre conati sumus, ut Horatianum illum a lergo sequi videremur, qui

Non fumum ex fulgore, sed ex fumo dare lucem Cogitat, ut speciosa dehino miracula promat.

Hor. de Art. Po. v. 143.

--Quid ais, mi Quintili? Nonne hic mythus perspicacissimus, ele-

Vide Spencii Polym. p. 106.

Non igitur Phœbus, sed Mercurius e fratribus natu major.

gantissimus, ipso dignus Mæonide! Nec est, ut opinor, quin celeberrimo e nostratibus paetæ libenter accinamus, ubi dicit, "Non bo-

nus quidem dormitat Homerus, nos autem somniamus."

Abi jam, Atlantide, et amico charissimo, eruditissimo, salutem defer; qui siquidem ingenuis me insererit criticis, vel Elea viderer redimitus lauro—sin minus, tu promtu proverbium est; "Ex quovis ligno non fit Mercurius."

HERMETICUS.

LOCI QUIDAM LUCIANI EMENDATI ATQUE EXPLANATI

A JOANNE SEAGER, A.B.

BICKNOR. WALLICE IN COMITATU MONUMETHIE RECTORE.

No. VI.—(Continued from No. XXIX. p. 155.)

I. DE SALTATIONE pag. 302. (p. 940. ed. Salmur.) ἐπεὶ δὲ κατὰ τὸν Νέρωνά ἐσμεν τῷ λόγῳ, βούλομαι καὶ βαρβάρου ἀνδρὸς τὸ ἐπὶ τοῦ αὐτοῦ ὀρχηστοῦ γενόμενον εἰπεῖν, ὅπερ μέγιστος ἔπαινος ὀρχηστικῆς γένοιτ ἄν. Legendum haud dubie βούλομαι καὶ βαρβάρου ἀνδρὸς τὸ ἐπὶ τοῦ αὐτοῦ ὀρχηστοῦ ΛΕΓΟΜΕΝΟΝ εἰπεῖν: nam dictum, non factum, narrat Lucianus.

IÍ. DE SALTAT. p. 303. (p. 941. ed. Salmur.) ή δὲ πλείστη διὰτριβή καὶ ὁ σκοπὸς τῆς δρχηστικῆς, ἡ ὑπόκρισίς ἐστιν, ὡς ἔφην. κατὰ τὰ αὐτὰ καὶ τοῖς ῥήτορσιν ἐπιτηδευομένη καὶ μάλιστα τοῖς τὰς καλουμένας ταύτας μελέτας διεξιοῦσιν. οἶδε γοῦν καὶ ἐν ἐκείνοις μᾶλλον ἐπαινουμένη τῷ ἐοικέναν τοῖς ὑποκειμένοις προσώποις, καὶ μὴ ἀπφδὰ εἶναι τὰ λεγόμενα τῶν εἰσαγσμένων ἀριστέων, ἢ τυραννοκτόνων, ἢ πενήτων, ἢ γεωργῶν, ἀλλὶ ἐν ἐκάστφ τούτων τὸ ἴδιον καὶ τὸ ἐξαίρετον δείκνυσθαι.

Conjecit Solanus Ol & your xal is include in ansociment vel in pro olds. Pro olds malebat Gesnerus ciads. Emendabam olim, dieficuour ATE your xal is include mandon in ansociment med minimus locus nec mutationis, nec interpretationis egere videtur; quippe sic jam recte conversus a Gronovio: Novit enim se in illis magis

laudari, eo quod similiz plane sit subjectis personis.

DE SALTAT. p. 306. (p. 944. ed. Salmur.) ήκουσα δί τινος καὶ περιττότερον τι ψανιευομίνου όπὸς της τῶν ὀρχηστικῶν προσωπείων στωτής, ὅτι καὶ κὐτή πυθαγορικόν τι δόγμα αἰνίττεται. Hoc toco de te aliqua arti saltatoriæ peculiari agit Lucianus; sed τη ὀρχηστική non proprium esse τὰ προσωπεία ejus [its masks] silere, manifestum est; nam προσωπεία omnia semper silent. Legendum itaque, ὑπὸρ τῆς τῶν ὀρχηστικῶν ΠΡΟΣΩΠΩΝ [characters, actors] σιωτής.

WALLER ON ANCIENT GEOGRAPHY

Report (published in 1814) tof the works concerning History to the french intifracient Literature, to which various members of the French intitute had devoted their attention, contains a very interesting account
of extensive resultates lately made on the old Itineraries of Perus,
and India; and on the marches of Alexander and Seleucus Nicator.
These, and similar researches, were the subject of some Members
composed by M. Walckenser, a learned member of the French institute, and justly celebrated for his knowledge of Ancient Geography, and his skill in illustrating the classical authors, who treat of
that important and difficult science. We are now enabled to present our readers with a notice of those researches, somewhat more
detailed than the account above-mentioned. In this Number of,
our Journal, we mention only the Memoir concerning the ancient
Itineraries, and those remarkable passes or defiles to which the
Greeks and Romans gave the name of Pylae, or Gates. In a funture Number we shall offer some notices of M, Walckenser's other
passearches.

INE two last segments of the Peutingerian Table comprise Itiness ries in Persia and India, hitherto unexplained; distances which no person has yet been able to combine; and names of places, for the greater part, not found in other monuments of antiquity, nor yet examined by modern writers, nor even registered in those voluminous dictionaries of ancient geography, of which it has been the professed. object to collect all the names recorded by old authors, or discovered. on medals, and in inscriptions, &c. M. Walckenaer's researches demonstrate that some Itineraries in the Peutingerian Table have been constructed according to those of Alexander's and Selencus Nicator's marches: that others are precious remains of the documents collected by Eratosthenes, for the composition of his Geography; and finally, that a third portion belongs to the flourishing ages of the Roman Empire. The distances given by the Peutingerium Itineraries agree with those of the marches of Alexander and Seleucus Nicator, and the other measures of the ancients felative to those countries, as preserve by Strabo and Pliny: M. Walchenner notices the different sources! whence their anthora defived their materials, the letters of Alexander the Great; -the description, componed by this conqueror's desire, the various provinces that sometituted his empire; -the journal Diagnetes, and of Beton :- the relations of Ptolemy, and of A bulus; of Nearchus, Onesightus, Patroclus, Megasthenes, D chus, and of Dionysius. ? .

Alexander's lettlet were still in existence when Pliny and Philipsotted them. The description of that monarch's empire, communicated to Patrockie by Report

keeper of the royal treasure. Patroclus himself had governed Babylonia and the countries bordering on the Caspian Sea; he was sent into India by Autiochus Soter. Diognetes and Bætou were the chief persons employed to measure the route of Alexander and of his army. Athenœus has preserved the title of their journal. Ptolemy the son of Lagus, and Aristobulus, were two of Alexander's generals, and participated in the events which their memoirs record. Nearchus and Onesicritus performed themselves that adventurous navigation from the Indus to the Persian Gulf, described in their own journals, which Arrian has preserved, and which Juba, king of Mauritania, abridged. Megasthenes, so often quoted by Strabo, was sent on an embassy to the Indian monarch, Sandrocottus. Deimachus, who, like Megasthenes, composed an account of India, resided in that country as ambassador to the son of Sandrocottus; and Dionysius, whose narrative Pliny has cited, was also a traveller in India, having been sent

there by Ptolemy Philadelphus.

From an examination of all these writings, and of the means which their authors employed in obtaining the best information, M. Walckenaer concludes,-" that no part of ancient science is supported on proofs more satisfactory and authentic." "But," adds M. W., " if the ancient measures have been taken with exactness, they should present a result corresponding to that given by modern measures, in cases where these have been taken with equal accuracy; and the positions of ancient places as well as of modern, may be determined with precision, by means of this agreement between works executed at epochs separated from each other by intervals of more than sixteen hundred, and more than two thousand years." Such a result could not have been obtained by means of the modern maps hitherto engraved and published: but the geography of Persia and even of India has within a short time made much greater progress than is generally known. This circumstance M. W. now first exposes in the course of his researches; and we learn that Manuscript Itineraries have been communicated to him, constructed with the utmost ingenuity and exactness by the able geographers who accompanied the last ambassador from France to Persia, and by other travellers. M. Walckenaer's work was completely terminated when Mr. Macdonald Kinneir published in London (at the end of 1813) his Memoir on Pirsia, and the map which illustrates it. M. W. does not deny that this map has been useful to him in confirming the exactness of some resultalready obtained, or in assisting him to obtain others still more exact; "but it bears," says he, "every acharacter of too great precipitation, and exhibits serious-errors which its author might easily have avoided, by combining with more care the materials that he possessed." M. Walekenzer then examines the advances which the geography of Hindustan has made, since the last edition of Major Renucli's Memoir and Map; and he indicates all that afforded him assistance in establishing a solid basis for his researches. These, he informs us, will be comprised in five different Memoirs. The object of M. Walcheoner in the first, is to ascertain the position of the Caspian Gates, noticed by Alexander's historians; and to compare with our modern. measures those great measures which the ancients have given us relatively to Persia, India, and Bactriana. The second Memoir will contain a geographical analysis of some Itineraries in the Peutingerian Table: viz. 1. From Seleucia to the mouth of the Persian Gulf-2. From Babylon to Echatana-3. From Echatana to Rhages-4. From Echatana to Persepolis. In the third Memoir M. W. directs his inquiries to the various roads which branched off from Rhapes. from the Caspian Gates, and from Persepolis, which led into India and Bactriana, and of which the details are found in Pentinger's Table, in Pliny, and in Strabo. Our learned author's fourth Memoir is dedicated to the great Itineraries given by Pliny, and the Table above mentioned, extending from the Indus to Palibothra, and from Palibothra to the mouth of the river Ganges. In the fifth and last Memoir M. Walckenaer discusses the Itinerary which the Peutingerian Table furnishes; comprehending the coasts of Malabar and of Coromandel: he compares the measures yielded by them, with those of the same coasts found in Ptolemy, and in the Periplus of the Erythrean Sea; and concludes with a short geographical analysis of the materials used in the construction of his map, which exhibits all the results of his researches. The first Memoir is entitled, " De la Position des Portes Caspiennes des Historiens d'Alexandre, et des Mesures générales données par les Ancieus, relativement à la Perse, à l'Arie, et à la Bactriane." In this, M. W. gives the texts which prove that the ancients took the Caspian Gates as a centre for all their measures. He observes that it is not only necessary to find the group of mountains which contained those gates, but to ascertain the valley which led to them, the entrance, and the central point of this defile. "The narrow pass of Khawar," says M. Walckenger, "is not that of the Caspian Gates, as Rennell, and after him, other modern geographers have believed; but these were situate more towards the north in the same group of mountains, near a place called Serbend. (a name which in Persian signifies the 'head of the defile,') north-eastward of the Ruins of Rhages, a position which accords with the measures and descriptions of the ancients, whilst the pass of Khawer, to the south-east of Rhages, is too remote, and is also contrary to their texts and measures."

Our author next examines those measures, in appearance contradictory, which Pliny, Strabo, Eratosthenes, and Ammianus Marcellinus, have given between the Caspian Gates and Hecatompylos; shows that all these agree among themselves, and that their seeming contranety arises merely from a difference of modules in the measures; and that they all agree with our modern maps in placing Hecatompylos at Dameghan. To this discussion M. Wulchemaer has annexed a map, entitled "An Essay on the Topography of the Caspian Gates, according to the Manuscript Itinerary of Trezel, the printed Relations of various Travellers, the Furkish

Geographer, and the Maps of Delisle and of Macdonald Kinneir. This central point being determined, M. Walckenzer examines the great measures given by the ancients, between the Pyla Caspia or Rhages, the mouth of the river Cyrus, the line where India commences, the river Jaxartes, Thapsacus, Pelusium in Egypt, Babylon, · Susa, Persepolis, and the extremity of the Persian Gulf. And he shows that they are exactly conformable to the modern maps that have been improved by the latest observations, such as those of Persia by M. La Pie, in the last edition of Chardin's travels, and that of M1. Macdonald Kinneir. He also proves that the stade of those aucient measures is always the same, that is, the stade of 11111 to a degree, or equivalent to the four hundred thousandih part of the circumference of the earth—that of which Aristotle has given the module, and which Freret, Delisle, D'Auville, Gosselin, and most other learned geographers have considered as the only stade applicable to the marches of Alexander. Thus, as M. W. observes, all of Asia that was known to the ancients is connected with the point of the Caspian Gates, of which the longitude and latitude are ascertained by their relatious with the points of Pelusium, and other places which the moderns have fixed astronomically and trigonometrically. M. Walckenaer further observes, that we should not be surprised at the exactness of those general measures given by the ancients; they were not only the simple estimates of distances between different places, but, as we perceive by the discussions in which Strabo employed himself, they served as bases for their maps. M. W. therefore examined them with minute attention, before he applied to the details.

He next demonstrates, from the agreement of these measures with the Peutingerian Table, that the Itmeraries of this map are the same that Eratosthenes used, and which he styled anepigraphic, or "without title." This ancient writer is thus justified from the reproaches of Strabo and Hipparchus, who blamed him for having preferred those Itineraries to the measures given by most approved geographers. Had Strabo and Hipparchus known the exactness of those Itineraries, they would, on this subject, have adopted the sentiments of Eratosthenes.

M. Walckenaer remarks that the measures given by the ancients are not always so exact as those which he has above mentioned. The ancients are often deceived both in the module of the stades which they employ, and in the manner of applying them; and, it may be said, in their calculations and their deductions. Of this, M. W. furnishes more than one proof, whilst analysing the discussions of ancient geographers concerning the form which should be given to Perria, to Arm, and to Bactrlana, Having explained the causes of that exactness which appears among the ancients, M. W. developes those of their errors—"All which causes," says he, "wate common not only to Eratosthenes and Hipparchus, but to all the ancient geographers; they explain the motives of their geographical

combinations, and may serve us in restoring their different systems of geography, with respect both to the coasts and the interior."

This, however, is not immediately the object of our learned author, who, in his present researches, is content to demonstrate, incontestably, that, from the agreement subsisting between the ancient computations and modern documents for general measures, it is possible to ascertain precisely the positions of ancient and modern places, according to the particular measures furnished by the old Itineraries. This task has been performed by M. Walckenaer in his Researches, which determine the situations of ancient places by those measures,

and confirm them by all the monuments of history.

An observation, which had been made respecting a passage of Pliny quoted in the preceding Memoir, suggested to M. Walckenser his "Remarks on the Defiles of Caucasus, and on the denominations of Caspian, Caucasian, Surmatian, and Albanian Gates, applied to those different Defiles." In these he has proved that the passage of Pliny, as found in the editions of Hardouin and Brotier, is either without meaning, or has a false and contradictory sense. But M. W. by merely changing the punctuation, without any alteration of the text, establishes the sense of this passage in a manner clear, evident, . and conformable to the configuration of the places which Pliny describes. An attentive examination of this passage has led M. W. to a discovery still more important. Pliny here accuses his contemporaries of having erroneously bestowed the denomination of "Caspian Gates," on a defile of Caucasus, and thus confounding them with the Caspian Gates, through which Alexander passed, and which, according to Pliny, were only known in his time from the descriptions left by those historians who celebrated that conqueror's expedition. This accusa tion, if well founded, would not only fall on Corbulo, who had made war in Caucasus, and transmitted to Rome a plan of the defile in the mountains there, which he styled " Caspian Gates," but also on the Emperor Nero, or his ministers, who, in au order given to the army, designated these defiles of Caucasus, by the title of Caspian Gates. And those personages Pliny reproaches, expressly and by name, for having committed such an error without leaving us ignorant of the means by which they might have obtained better information. Pliny's accusation would likewise affect Strabo, Eratosthenes, Tacitus, Suetonius, and Procopins, who had also fought in this country with Belisarius, and has so well described it. Priscus, also, would incur the blame of Pliny; and he who arranged the Pentingerian Table, and has placed a station called Cartific widently in Caucasus. every author must have erred except Pliny. But M. Walckenaer proves, from a passage in Strabo, that the chain of Caucasian mountains bore among the natives the name of Caspian mountains, and this was its most aucient denomination; that one of the loftiest summits of the Coucasian hills was particularly styled Mount Caspian; . that, in short, there was a race of people called Caspians, in the country of Caucasue; and that, consequently, the ancient authors were,

not wrong in giving to the defiles of Caucasus the name of Caspian Gates, although those defiles were very different from the Caspian Gatse of Alexander's historians. The charge of incorrectness, therefore, must fall on Pliny himself, who, in this passage, has undertaken with such an air of authority to censure others. Modern writers, however, and those especially who have composed dissertations, or professo, to illustrate the denominations of Concasian, Albanian, and Caspian gates, deceived by the tone of assurance which Pliny adopted, have taken his remark as the basis of their decisions. Like him, they condemn the ancient authors whom they endeavour to explain and correct after their own fashion, and from this have resulted errors fatal in their consequences respecting many points of considerable importance in ancient history. It was through the defiles of Caucasus, that those Nomades of northern Asia have often passed, to make such terrible irruptions into the civilized nations of the south, as in different ages have so changed the face of the world. These defiles are thus connected with the most important epochs of history, and their names are always found in recitals of the greatest revolutions and most extraordinary events. These Researches, therefore, must be highly interesting, which restore to many passages of the ancient writers, that clearness of which they had been deprived; and, particularly, rectify an error first committed by an ancient author, and allowed to subsist during the course of nearly eighteen hundred years.

ON THE SCIENCE

OF THE EGYPTIANS AND CHALDEANS.

Part II.-[Continued from No. XXXI. p. 160.]

The statements which I have made of the calculations of the ancient Orientalists, and especially those which I have cited on the authority of Eratosthenes and Aristotle, must appear extraordinary, and may perhaps appear suspicious, to those who have been accustomed to think contemptuously of the knowledge of the Egyptians and Chaldeans. If my conclusions be just, the sages of Egypt and the East had determined, with as much accuracy as the moderns, the distance of the sun from the earth, and the circumference of this terrestrial globe; and should this statement be founded on truth, it will be difficult to deny that the exact sciences were outlivated in former ages with as much success as at present;

nor ought this to appear wonderful, since no kingdom of modern Europe has flourished for so long a period as Egypt did, from the age of Misraim to that of Cambyses, including nearly seventeen centuries; or as the Assyrian empire, which lasted for at least 1900 years, from Ninus to Sardanapalus; or as the kingdom of Babylon, which was established by Belus, from whose reign to the time of Cyrus we cannot reckon less than 1700 years. But in order to enable those, who have not examined the measures employed by the Greeks in stating dimensions, altitudes, and distances, to judge of my reasoning, it is necessary that I explain myself distinctly concerning the stadium. The subject is, I admit, extremely dry; and I shall therefore endeavour to be as brief as I possibly can be with perspicuity; but as this measure perpetually recurs in the language of astronomers, as well as in that of geographers, it is very necessary that we should ascertain the meaning, or rather the various meanings, of this important word. l explain it as follows.

When the Greeks made computations of any considerable extent from their own observations, or when they thought it necessary to reduce Oriental measures to their own standards, in order to assume to themselves the merit of having made any particular calculation, they generally reckoned by the Olympic stadium. The celebrated D'Anville estimates this stadium, which contained 600 Greck feet, at 941 toises, or 567 French feet, equal to 605 English feet and a fraction, reckoning the English foot at 1000, and the French at 1068, as their relative proportions. But D'Anville has made this calculation in seckoning by the short Greek foot, which Dr. Greaves calculates to have been to the English as 1007 to 1006. though even this difference, small as it is, be probably greater than the truth. I find, however, that it was the long Greek foot, which was reckoned for the Olympic stadium. Dr. Arbuthnot thought that this long Greek foot exceeded our English foot by 875 decimals of an inch; but this estimate appears to me to be too high. The Olympic foot contained 4 palms, and the palm in question here was the δοχμή, or δακτυλο δοχμή,—the breadth of the 4 hagers compressed, equal to about 3 English inches, and nearly one 5th of an inch. Consequently the Olympic stadium, containing 600 of these long Greek feet, was equal to nearly 625 English feet, or

perhaps fell beneath that measure by a very few lines. It was by this measure of 600 long Greek feet, that Herodotus reckoned when he gave the height of the pyramids in the lake Mæris at one stadium; and Eratosthenes, either from the desire of being contidered as the author of the calculation, or from the fear of being accused of excessive exaggeration, probably brought the Oriental stadium, equal to 330 short Greek feet, to the Olympic stadium of 625 feet, when he gave the distance of the sun from the earth at 804,000,000 stadia. Even this, statement so much alarmed the copyists, that they threw it out of Plutarch's text, and, had it not been for the translation of Xylander, we should not have known that it had ever existed. But is clear that Xylander must have found this statement in the original, from which he made his version.

Again, when the Greeks spoke of distances measured by strangers, and when they did not think it necessary to speak with precision, or supposed that they would be understood by their countrymen without appealing to their own peculiar standard, they still employed the word stadium to express proportions of extent, which, though very different from that of the Olympic stadium, yet came nearer to it than to any other itinerary measure for which they had a name in their language. Thus they used the word stadium to denote portions of the Eastern mile, of the Persian parasanga, and of the Egyptian scheenus, though one of these portions exceeded, and all the rest (some of them very considerably,) fell beneath, their own standard. The French Academicians have reckoned, besides the Olympic stadium—one of 1,14 toises, or 684 French feet, equal to 729 English feet—one of 85 toises, or 510 French feet, equal to 545 English feet—one, equal to 483-495, or 500, or 505 English feet—one of 68 toises, equal to 435 English feet and of one 514 toises, equal to about 330. English feet.

The stadium of 729 English feet, or 114 toises, was an itinerary measure of Asia Minor. It seems to have been designed to give the 27th part of an Egyptian scheenus, or 20th of a Persian parasatter or 9th of an Eastern mile. Perhaps it may be the stadium neckoned at 1000 feet, natural measure, by Censorinus. Bailly says it was the same with the Alexandrian stadium, in which supposition he follows the Roy, though, I believe, Thomas, Smith,

an Englishman, was the first who ascertained the existence of this tadium.

Cassini pointed out another stadium of 85 toises 3 feet 7 inches, or 513 French feet 7 inches, equal to 548 English feet, 8 inches. Bailly tells us, that this stadium was the 30th part of a parasanga; but, for reasons which I shall state in the sequel, I must reject this computation. The stadium in question was an approximation to the 36th part of a scheenus, and to the 27th part of a parasanga. Posidonius assigned 240,000 of these stadia to the circumference of the earth; and in reckoning 668 to the degree, the error for the whole circumference of the globe will not amount to 120 miles.

D'Anville estimates at about 751 toises, (about 483 English feet,) the stadium, which he considered as equal to the 10th part of a Roman mile. But, I think, he has shortened this stadium too much. It might nearly answer to the 10th part of a Roman mile, without being rigorously exact; for it does not appear to have been originally a Roman measure, and was apparently in previous use among the Greeks. It seems to me, that this was the stadium generally understood by Xenophon. D'Anville observes, that the distance from Gesoriacum navale (Boulogne sur mer) to the Rhutupiæ statio (Richborough) was always reckoned at 450 stadia, and that the measured distance amounts to between 33 and 34,000 This gives a result of from 74 to 751 toises to the stadium. But 34,000 torses amount to 217,600 English feet, about 1120 feet Now, as nearly as I have been able to above 41 English miles examine and calculate the distance between the two places, I should reckon it to be greater by at least 2000 feet, supposing the sea to have once washed the very walls of Richborough castle, which, & think Camden says, was a mile from the shore in his time, Without following D'Anville through his calculations, I must observe that other respectable writers assign 500, and even 505 English feet to this stadium. Major Rennell says, that the stadium calculated on the 150th part of a mean march-of his scale would be 493 feet. But after having examined the question with all the ettention in my power, I would fix this stadium at 495 English Apri; and I hold it to have been originally an Eastern measure, often entering into the calculations of the Greeks, and answering precincly to the 40th partitifa schodius, and to the 80th part of a partsanga. Major Renntll says, that the stadium employed by Xenophon might be reckoned at 750 to the degree; but when Xenophon spoke of the stadium, equal to the 30th part of a parasangs, I am inclined to reckon it at 740 to the degree.

The stadium of 68 toises (about 435 English feet) was an approximation to the 34th part of a parasanga, and to the 46th of a scheenus.

We now come to the stadium reckoned at $51\frac{1}{2}$ toises, or 509 French feet, or perhaps rigorously something more, and rising above, rather than falling under, 330 English feet. This stadium bore a manifest proportion to that of 495 feet, and answered precisely to the 45th part of a parasanga, and to the 60th part of a schenus.

It follows, that I reckon the parasanga at 14,850 feet, and the scheenus at 19,800. I estimate the parasanga at more than 3 Roman miles, because it was equal to 3 long Persian miles, or to 9000 long Persian cubits, as is evident from the tables of Abulfeda. Now the modern Persians estimate their ancient cubit at 8 digits more than their present, which I estimate as not quite equal to 15 English inches, being less by a very minute fraction of an inch. The ancient cubit then, according to their reckoning, will be something less than 20 of our inches, but more than 194. Consequently 9000 cubits of this measure may be estimated at about 14,850 feet—since the parasanga by this rate was more than 14,750 feet, and less than 15,000.

Shah Cholgi has estimated the circumference of the earth at 8000 parasangas, reckoning 22 parasangas and a fraction to the degree. The error for the whole circumference of the earth is so great, as to prove that the Persian astronomer could not have measured an arch on the meridian with any sort of accuracy. Upon what principle then did Cholgi make his reckoning, for it is evident that he set out upon certain data, from the exactness with which he calculates, and brings out the round number of 8000. parasangas, by the fractions of miles, and cubits added to each of the 22 parasangas for each degree. It is well known that the Persian astronomers copied, as nearly as they could, the disciples of the Alexandrian school, and that they preserved many things by tradition from that school. We have seen above, that Posidonius calculated the earth's circumference at 240,000 stadia. I campot help suspecting, that Chelgi had the tradition of this membersment, which probably was not originally made by Posidonius; and that

he was aware that it was made by a proportion of the parasanga. But the most common partition of the parasanga by stadia was into 30 parts; and Cholgi, not being aware that Posidonius had employed another ratio, mistook the stadium of 548 feet, equal to the 27th part of a parasanga, for the stadium of 495 feet, equal to the 30th part. Now mark the result : -240,000 stadia, multiplied by 495, will give exactly 118,800,000 feet; and 14,850 will give as precisely 118,800,000 feet.

The scheenus has been generally reckoned equal to 4 Roman miles. The estimate among us of one M. P. is 967 English paces, each pace equal to 5 feet. 4 M. P. are therefore equal to 9868 Euglish paces, or 19,840 English feet. I teckon the scheenus at 19,800 feet. The excess of 460 feet over 4 M. P. is proposed with the full conviction of its being necessary to adjust the mea-Most assuredly the schoenus, and 4 Roman miles, had an accidental coincidence more or less exact. It would be idle to suppose, that where a distance lay between 19 and 20,000 feetbetween 4 Roman nules and a scheenus—which supposes a yet smaller difference, that a Roman, in his itinerary, would much hesitate in resolving the Egyptian into the Latin measure. How often does an Englishman reckon the French league at 3 English miles! The difference between a scheenus and 4 M. P. amounts to nothing like this. But I shall now place before my readers a table of the relative proportions of the different stadia to the scheenus, to the parasanga, and to each other.

TABLE.

The reckoning according to English feet, inches, &c.

Egyptian scheenus=19,800 feet. Four Roman miles=19,340 feet. Stadium of 729 feet, multiplied by 27=19,683 feet. Olympic stadium of 625 feet, multiplied by 32=20,000 feether Stadium of 548 feet, 8 inches, multiplied by 36=19,751 feet. Stadium of 495 feet, multiplied by 40=19,800 feet., Stadium of 435 feet, multiplied by 45=19,575 feet. sadium of \$30 Teet, multiplied by 0=19,800 feet.

Persian parasanga=14,850 feet. Three Roman miles=14,505 feet. Stadium of 729 feet, multiplied by 20=14,580 feet. Olympic stadium of 625 teet, multiplied by \$4=15,000 feet. Stadium of 548 feet, 8 inches, multiplied by 27=14,814 feet. Stadium of 495 feet, multiplied by **3**0=14,850 fect. Stadium of 435 feet, multiplied by 34=14,790 feet. Stadium of 350 feet, multiplied by

48=14,850 feg's

We now see, why Herodotus reckoned the scheenus at 60 stadist, Eratosthenes, in one instance, at 40, and Pliny at 32. Herodotus meant the stadium of 330 feet; Eratosthenes that of 495 feet; and Pliny the Olympic stadium. Again, when Herodotus spoke of the parasanga as equal to 30 stadia, he had in view the stadium of 495 feet. But in order better to show the application of these different stadia to the same dimensions, let us turn, by way of example, to the accounts which the ancients have given us of the vast capital of Chaldea.

Herodotus tells us, that the whole extent of the walls of Babylon amounted to 480 stadia. On the other hand Diodorus Siculus, where he follows the authority of Clitarchus, who had resided at Babylon, and Strabo, (for so the text should be corrected) reckon the whole extent of the walls at 365 stadia. Now it is clear to me, that Herodotus made his calculation by the stadium of 330 feet, which was equal to the 45th part of a parasanga, and that Diodorus and Strabo made theirs by the stadium of 435 feet, which was an approximation to the 45th part of a schoenus, but which gave almost exactly the 34th part of a parasanga. According to the first of these writers, the walls were 158,400 feet, precisely 30 English miles in extent; and, according to the two last, the extent amounted to 158,775 feet, making little more than half a furlong of difference.

We may be almost certain, that when Strabo stated the breadth of the Euphrates at Babylon at one stadium, he spoke of the stadium of 435 feet, because Mr. Rich measured the stream at Hellah, and found it to be 450 feet in breadth, when the river was apparently a little above its usual height.

I am inclined to think that the tower of Belus, which formed a square of one stadium for its base, and which, with seven towers raised one above another upon this base, was also one stadium in height, was not 500 feet in any property dimensions, because the extent of its mass of rulus, which ought to be considerably greater than the extent of its original site, does not authorise us to calculate this stadium at more than the length of the stadium of 435 feet.

I am well aware that I have differed in these statements, not only from Freret, D'Anville, and Bailly, but more essentially from Major Rendell. This gentleman, in his very valuable work on the

geography of Herodotus, reckons, as a mean, about 718 stadia to the degree, and estimates the general rate of the stadium at 500 feet. That there existed a stadium nearly of this measure, though I would rather reckon it at 495 feet, and that this stadium was in very general use as an itinerary measure, I. think undeniable. have no doubt myself, that it answered to the 30th part of a parasanga; and that it was the stadium by which Xenophon, in particular, commonly reckoned; and, therefore, admit its general use: but, when Major Rennell goes so far as to hold, that the Olympic stadium was never employed as an itinerary measure; when he regards the stadium of Aristotle, valued at 1111 (rather 1112) to a degree, as merely imaginary; and when, in short, he rejects every stadium proposed by Cassini, Freret, D'Anville, and other writers. in favour of that of 500 fect, I find it impossible to agree with him. I would ask this acute and able writer, if we reject the stadium of 330 feet, as well as the Olympic stadium, how are we to reconcile the Greek authors, who have stated so differently, according to appearances, the length, for example, of the coast of Egypt, from Plinthine to the lake Serbonis? According to Herodotus, the extent is 60 scheeni, which hereckons at 3600 stadia; -after correcting an error in Strabo, his computation gives 1970 stadia. If the stadium in both cases be reckoned at 500 feet, a difference is here exhibited, which is utterly unaccountable. Herodotus is precise; he repeats this calculation. Strabo and Diodorus differ from each other only by 30 stadia. Now let us suppose, that Herodotus reckoned by the stadium of 330 feet, and Strabo by the Olympic stadium, and the difference between them dwindles, comparatively speaking, to a trifle,—it will amount to little more than & miles for the whole coast of Egypt, with all its sinuosities included.

No one will deny that the Olympic stadium was employed in measuring dimensions, since Herodotus used it to denote the height of the pyramids in the lake Morris. But why, I would ask, was this historian so very particular in his description, of this stadium, if he did not mean distinctly to mark, that it was different from that by which he had been estimating the circuit of the lake, which circuit he makes equal to the extent of the whole Egyptian coast, 3600 stadia? It is difficult to imagine this, even in reckoning the stadium, only at 330 feet; but if it be reckoned at 500 feet, this

lake must have been about 341 English miles in circumference; and, all matters considered, this is quite incredible. But I shall now proceed to show, that there is good reason for thinking, that there really was an itinerary measure, both in Egypt and in Chaldea, equal to 330 feet.

The word scheenus ($\sigma\chi\sigma\sigma\sigma\sigma$) is said, in a passage in Plutarch, to be of Persian origin; and the Coptic word CHDYS, which signifies a chain, or cord, may have come from the same source. But if this word were originally Persian, we may consider it as at least highly probable, that the measure also was introduced by the Persians, after Cambyses had added Egypt to the provinces of his empire. Now I shall proceed to show, that the Chaldeans had one itinerary measure equal to the third part of a scheenus, and another equal to the sixth part of a scheenus, each of which they partitioned into 10 parts; whence it follows, that the 10th part of the first measure was equal to the 30th part of a scheenus, and that the 10th part of the second measure was equal to the 60th part of a scheenus.

I shall endeavour to explain this matter with as much brevity as possible; but in making such an analysis, it is not easy to avoid some tedious details. The Orientalists reckoned their stadia, (I can find no other word to express my meaning,) by cubits, as the Greeks reckoned theirs by fathous and by feet, and the Romans by paces. Some writers think, that the Egyptian and Chaldean cubits were the same. The Egyptian cubit called drah, which word is used by the Persians (هراع), is estimated by Bishop Cumberland at 21 0 English inches, and by Fieret at 20 10 00 French inches. Both these calculations seem to me to be too high. D'Anville calculates the Egyptian cubit at 19 French inches and 8 or 9 lines, and the Chaldean cubit at 19 French inches. 'This again is probably below the standard. I consider the Chaldean and Hebrew cubits to have been the There were two Chaldean, and two Jewish subits. Herodotus says, that the royal Chaldean cubit was longer by three digits than the common. According to Ezekiel, the long Hebrew cubit was longer by a palm than the common cubit. This palm was the short palm, and may be proved to be so from Jerom; and therefore should have rather been rendered day to low than was a work, equal to four digits. But the-

rodotus may not have known the precise difference letween the two Chaldean cubits; and there are very powerful arguments to show, that the Chaldean and Hebrew cubits were the same, Ezekiel evidently spoke with the intention of conveying very exact information.—"And these are the measures of the altar by cubits, the cubit being a cubit and a palm." Now it is to be remembered, that this was written at Babylon, and was addressed to the Jews who had been long settled there. These Jews were already half Chaldaized. prophet himself introduces the Chaldaic idiom into his writings, as is evident from the sense in which he uses the word I in the very verse from which I have been quoting. The cubits of which he spoke were clearly Hebrew cubits, because Hebrew measures alone were employed in the construction of the temple, of the altar, and of the ark. If, then, the Chaldean and Hebrew cubits had been different, it cannot be supposed that the prophet would have failed to have remarked it to the Babylonian Jews. No doubt he would have said, these cubits must not be mistaken for the Chaldean cubits, with which you have been accustomed to measure since the captivity. It is scarcely possible to suppose, if any difference had existed between the Hebrew cubits, and those in general use at Babylon, that this remark would have been omitted. I likewise find, that Jerom translates אמה ומפה (a cubit and a palm,) cubitus verissimus; and what can be understood by this, unless it be, that such was the standard cubit both in Palestine and Assyria. But if any doubts yet remain on the subject, let us turn to the decree of Cyrus, in Ezra. There the word row, cubits, is clearly Chaldaic. Now if the 60 Chaldaic cubits allotted for the site of the temple, had not exactly corresponded with 60 Hebrew cubits, can it be supposed that Ezra would have said nothing on the subject? Would Josephus have translated this *decree, and yet not have remarked, that the cubit in the second temple was not the same with the which had been received as a measure in the first? I cannot believe it, and therefore I hesitate not to affirm, that the Hebrew and Chaldaic cubits were the same.

We are now to consider the exact length of the Hebrew long cubit, equal to the Chaldean royal cubit. The ark is stated, in Exodus, to have been two cubits and a half in length; and Josephus says that its length was five spans. Consequently the scubit was

precisely two spans in length. But the word ownlawn, used by Jasepher, answers to the Hebrew 1771, which, I believe, is always rendered onitany by the LXX. In the tables for Greek mea--sures, however, I find the σπιθαμή set down as equal to 9 English inches 656 decimals, reckoning 1000 parts to the inch; and in the tables for Hebrew measures, the An is made equal to 10 English inches 944 decimals. If these accounts be accurate, then Josephus has stated the ark to be at least half a foot shorter than it really was according to scripture; and this error occurs in a measure of only two cubits and a half! But, if this difference had really existed, would not the accuracy of the antiquarian, and the piety of the Jew, have induced Josephus to have said, the length of the ark, though exactly equal to five Hebrew spans, which make two cubits and a half, must be reckoned at five Greek spans and two palms? I believe that the length of the σπιθαμή is accurately. stated at 9 English inches 656 decimals; but when the zereth is reckoned at almost 11 English inches, I cannot agree to the estimate, because then both Josephus and the LXX must be often accused of very inaccurate calculations. If, therefore, we recken the zereth to have exceeded 10 English inches by 4 or 5 decimals, in counting the inch at 1000 parts, it is as much as can be well allowed, for even at this rate we shall have a giant's span, and exceeding the common measure of the human foot. Thus, however, we shall have two Hebrew spans, or the Hebrew cubit, equal to 20 English inches 8 of 10 decimals. It has been argued, that the cubit of 20 544 French inches, which is said by Freret to have been the length of the Egyptian cubit, must have been also that of the Jews and Chaldeans. We might as well contend, that the Winchester bushel must be the bushel of Cork and Aberdeen. In reckoning the orthogy at 9450 English inches, and the man at 10 10 10 linglish inches, the excess of the Hebrard apan over the-Greek will not be so great as to make it sufprising that it was not noticed by Josephus and the LXX; but had the prop been equal 10 10 10 41, the case would have been different.

The long Jewish, or Chaldean mile contained 4000 cubits; and was divided into 10 parts or stadia, each consisting of 400 cubits. The short mile, otherwise called the Sabbath-day's journey, was precisely the half of the long mile, and was divided into 10 parts, or

stadia, each containing 200 cubits. Allowing 20, 180 English inches to the Chaldean cubit, we have, for each of these stadia of 200 cubits, about 330 English feet. It follows, that the stadium of the long Chaldean mile, made the 30th part of a scheenus; and that the stadium of the short Chaldean mile answered to the 60th part of the same measure:—22½ of these long, and 45 of these short stadia were contained in a parasanga.

It was by the stadium of the short Chaldean mile that Herodotus appears to have counted, when he reckoned the extent of the walls of Babylon at 480 stadia; and I think that it was likewise, by this measure, that Aristotle, upon the reports perhaps of Callistbenes, and apparently taken from the Chaldean mathematicians, reckoned the circumference of the terrestrial globe at 400,000 stadia.

The Persian parasanga (فرسخ), or pharsank (فرسنك), consists, as I have already stated, of 9000 long cubits, containing 32 digits each; but as each of these digits contains only the measure of the breadth of 6 barley-coins, some difficulty occurs in settling the precise length of the cubit. The long Scripture cubit has been estimated at $19\frac{680}{1000}$ English inches in some of the tables. I think this is too short for the Hebrew measure, and I conclude that the calculation has been founded on the Persian measure. Thevenot, in counting barley-corns, which was not the way to get at the exact truth, since the measure which is fixed must be fictitious, determined the Persian cubit to be equal to 18 French, or 18 100 Eng. lish inches. I would rather take the measure as set down in the tables, with the slight difference of about the 34th of an inch; and, rejecting Thevenot's calculation, I would reckon the long cubit, called the black, at 19 inches and 850 decimals. But the parasanga contains exactly 3 miles, and each of these miles contains 3000 long cubits; whence it follows, that the long Persian mile (مير) holds the middle place between the Girand the short Chaldean miles. The long eastern measures, therefore, seem to have borne relations. to each other, which have not yet, perhaps, been investigated with sufficient precision. "

NO. XXXII. Cl. Jl. \ VOL. XVI. . S

September, 1817.

W. DRUMMOND.

P. S. In my last article an error has occurred, in stating the number of English miles, at which Eratosthenes, in calculating the distance of the sun from the earth, had really estimated that distance. The number of stadia, reckoned by that philosopher, between the earth and the sun, amounted to 804,000,000, and each stadium consisting of 625 English feet, the distance should have been stated at 95,170,454 English miles, instead of 95,193,000. It is always painful to have committed a mistake; but I find some consolation in having again to call the attention of the reader to this calculation, which Eratosthenes must have had from Oriental tradition, and which could not have been a mere guess. Let the scientific reader decide, how far it attests the progress of knowledge in the ancient kingdoms of Egypt and Babylon, The distance, assigned by modern philosophers to the sun from our planet, has been stated, since the transit of Venus in 1769, at W. D. 95,173,000 English miles.

v. 26. he shall, shall.

Сн. XV. v. 2. purgeth it, purgeth.

- v. 6. cast forth, cast out.—and men gather them, and cast them into the fire, and they are burned, and it is gathered, cast into the fire, and burned.
 - v. 11. might remain in you, in you may remain.

v. 13. a man, he.

v. 20. kept, observed.—keep, observe.

v. 24. both seen and hated, seen them, yet they have hated.

Cii. XVI. v. 2. cometh, that, is coming when.—doeth God service, offereth a sacrifice to God.

v. 8. reprove, convince.

v. 25. proverbs, parables.—show you plainly of the father, give you a plain account of the father.

v. 26. I say not, I need not say.

CH. XVII. v. 9. · I pray wot, I pray not now.

v. 11. own name, those whom, authority, which.

v. 12. in thy name, by thy authority.

v. 13. might have my joy, may have their joy in me.

v. 22. given me: for thou lovedst me before, given me, for thou lovedst me, before.

Gu. XVIII. v. 14. which gave, who had given.

v. 25. and, as,

v. 28. defiled: but that they might eat, defiled, and rendered untit to eat.

v. 37. Art thou a King then? Thou art a King then?

CH. XIX. v. 24. rent, rend.—that the scripture might be, so that the scripture was.

v. 40. as the manner of the Jews is to bury, according to the manner of embalming among the Jews.

v. 41. in the place, near the place.

v. 42. There they laid Jesus therefore, because of the Jews preparation day, for the sepulchre was nigh at hand, There, as this sepulchre was near, they laid Jesus, on account of the preparation of the Jews.

CH. XX. v. 6. cometh, came.—seeth, saw.—clothes lying,

clothes.

v. 9. knew not, had not understood.

v. 19. were assembled for fear, were assembled, for fear.

v. 27. faithless, incredulous.

v. 31. might, may.—believing, by your belief.—might, may. CH. XXI. v. 7. his fisher's coat unto him, on his fisher's coat.

v. 11. for all, although.

v. 16. again the second time, the second time.—feed, tend.

v. 21. what shall this man do, what will become of this man!

v. 24. every one, separately.

C. P.

ON THE CHARACTER OF PLUTARCH, AS AN HISTORIAN.

With Remarks on some of the "Lives of the illustrious men" of Greece.

"There is a history in all men's lives
Figuring the nature of the time deceas'd." 2. Hen. iv. 3. 1.

ALTHOUGH none of the works of Plutarch rank him in the list of professed historians, yet it cannot be necessary to show the intimate connexion, which subsists between the duties of the writer of history and those of the writer of biography. This most especially takes place, when the subjects of the biographer have

been public characters, and have performed the first parts in the thrama of the day. It is then, that he has a double duty to, pera form: he ought not only to exhibit the moral and intellectual character, the private and domestic actions, but likewise to enter into the details of the public transactions, in which his hero has been concerned. It does not hence follow that the biographer must be the historian of the times, in which the public character has figured: when, indeed, that character, as often happens in Plutarch, has been the chief director of the energies of his nation, the mover and adviser of all the political measures of the day, the sphere of the biographer is considerably enlarged; but even then his duty only leads him to notice the transactions, in which the subject of his memoirs was involved, and to show their relative importance and connexion. For it belongs to him not only to raise the superstructure of his actions, but also to exhibit a scale by which its parts may be measured, and the size of the whole ascertained. Though one particular phænomenon may be the object of exhibition, yet he must fill the unoccupied parts of the canvas with other objects and other figures, not merely to relieve the eye, but to show the keeping of the whole.

It would be a truism to observe that the biographer is as responsible for the truth and fair representation of general history as the details of the individual life. The biographer of a public man is, in fact, as much an historian as the historian of any particular place or time. Plutarch is as much an historian as Bentivoglio or Bishop Burnet. The general historian sets before us the prospect of a wide and extended country; the biographer puts the telescope into our hands; and though the view is limited, yet the part observed is much more minutely and distinctly seen. The one gives us the outlines of kingdoms; the other fills up the details of departments; and each is answerable for the grand features of the country that comes within his observation.

From the works still extant, and from the much greater number we find in the list given by his son, Plutarch appears to have been not only a voluminous, but a very general, writer. He wrote in nearly every department open to the ancient philosopher. In his own time, his works were perhaps more duly appreciated than at present. He met indeed with extensive consideration

in his visits to Rome; but he is seldom mentioned by his contemporaries and the writers in the times immediately succeeding. On the revival of literature a high value was put upon his philosophical writings. In the course of a pursuit, which led me to pay some attention to the moral writings of Plutarch, I became convinced of the fallacy of the many eulogies which I had heard and read of his intellectual power and philosophical spirit. His works are valuable, because in many instances they contain transcripts of the opinions and reasonings of prior and superior philosophers. As literary productions, they should be considered as the contents of his huge common-place books, selected and threaded together with some ingenuity.' Plutarch, and the many, who have quoted and trusted his lives as authentic history, have erred; he in the design of his history or biography, they in their mistaken view of this design. They have imagined that the truth of history was the object of his research, that he was anxious to illustrate the obscure, to confirm the doubtful, and by a collision of authorities to elicit a fair and veracious account. οὖτε ώς ποιῆται ὑμνηκασι περὶ αὐτῶν ἐπὶ τὸ μείζον κοσμούντες-ούτε ώς λογογράφοι ξυνέθεσαν έπλ το προσαγωγότερον τη ἀκροάσει ή ἀληθέστερον.—He does not seem to have felt that histories of the times, of which he writes, were wanted. He quotes no less in his lives than two hundred and fifty authors, most of whom are historians. "I write lives," says he, "not histories." He certainly did not write histories, nor can I think his pieces of biography are "lives" properly so called. They are rather characters than regular lives. One of Plutarch's principal objects was to describe a character,—to gather the της ψυχης σημεία—to paint the "portrait de l'âme." He little regarded historical truth when

Should this opinion appear severe, and draw down the anger of the admirers of Plutarch, I will shelter myself behind the high authority of Brucker, who, though he did not contribute to form, has confirmed that opinion. Et judice ad quidem facultate, qua polluisse multis videtur, ultra mediocritatem non fuisse gavisum, ea, que vel ipse tractavit, argumenta mediusque ratiocinands, quem adhibuit, vel que ex veterum systematibus descripta, illustravit, satis produnt. Unde si cum Vossio inter philologos et historicos summos referendus est, de quo disceptare nolumus, philosophis tanto illum summis, cum eo adsenbere, veritati omnino est contrarium, cum intra rediocritatis limites ejus philosophia consistat.

he had conceived the design of drawing any given character, and was in search of traits to illustrate and support his opinion. It is thus that he disregards all comparative authority, giving in name-rous instances more credence to a flying rumour, or to the calumny of an obscure libeller, than to the weighty testimony of Thucydides or Xenophon. Hence he so frequently contradicts himself, presenting us, in two different lives, with two different accounts of the same transaction; sometimes attributing a saying or an action to one man, sometimes to another, as it suited his present purpose; "tant il vrai," says Bayle, "qu'il étoit en possession de faire servir une même historiette à divers usages." Barnes, as he is quoted by Bayle, has found the same fault: Neque enim inusitatum Plutarcho easdem res et sententias aliquando variare, aliquando diversis authoribus tribuere, non memorià lapsus, sed ut in rem suam, quam præsens ornat, torqueat.

Plutarch, though, as I have already observed, to draw characters was his object, has not excelled in the delineation of the character of man as found in the experience of life. His hero is either wholly avaricious, wholly just, cruel, or ambitious. He seems to have held that every man is led by some paramount and uncontrollable passion, to know which, is to obtain the key to all his actions. The name of the individual is in some cases little more than the peg on which he hangs the symptoms of the ruling passion. His heroes are too often like the heroes of the Faery Queen, where "holiness" and "justice" are embodied into knights, and led through a round of allegorical adventures. Plutarch was not acquainted with the wayward nature of man; he had not studied the principles of human action; he did not know that there is no road marked out before us, and that all our actions are but the consequences of circumstances acting upon the strength or weakness of our minds, and the sensibility or obtuseness of our feelings. The nature and species of the mental faculties are never the topics of his discussion. It is surprising that Mantagne, whose mind was so essentially different from Plutarch's, the one being excellent in the very qualities in which the other was deficient, should have thought, highly of the "parallels." We must attribute it to the force of early impressions. "Plutarch's lives" was the text-book of his father, when he read him lectures on politics in the course of that

oral or viva roce education which so materially contributed to forth the character of Montagnes-St. Evremond has some observations, which so exactly coincide with my ideas on this head, that I shall indulge myself in the quotation. St. Evremond, though not a learned man, as that expression is generally understood, was a deep and lively observer of mankind. Speaking of Plutarch, he says, "mais je pense qu'il pouvoit aller plus avant et pénétrer davantage dans le fond de la Nature. Il y a des replis et des détours en notre âme, qui lui sont échappés. Il a jugé de l'homme trop en gros, il ne l'a pas cru si différent qu'il est de lui-même, méchant, vertueux; équitable, injuste; humain et cruel; ce qui lui semble se démentir, il l'attribue à des causes étrangères. Enfin s'il définit Catalina, il nous le donne avare ou prodigue; cet 'alieni appetens, sui profusus' étoit au-dessus de sa connoissance, ct il n'eût jamais démêlé ces contraires que Salluste a si bien séparés, et que Montagne lui-même a beaucoup mieux étendus." Dryden, in his life of Plutarch prefixed to that translation "by as many hands as lives," that "child of many fathers," has taken notice of this passage, and endeavoured to refute it by quoting the character of Sylla. If St. Evremond had been selecting instances, he would have adduced this very character in confirmation of his opinions. It is true Plutarch there mentions many of what he calls "anomalous" traits: he makes Sylla haughty, and severe to inferiors, submissive and courteous to superiors, or to those of whom he had something to ask, punishing slight, and overlooking heavy offences; but he accounts for these contradictions in the very way to which St. Evremond objects. These things, says Plutarch, can only be reconciled by supposing Sylla to have been naturally vindictive and cruel, but occasionally giving way where his interest was concerned.

Plutarch's principal motive for writing his "lives" was the best, —
the advancement of virtue. He had two subordinate motives,—to
recommend democracy, and to exhibit in a favorable light the
illustrious men of Greece. It was his opinion, that the representation of a great and virtuous character, would materially advance the
interests of virtue. He did not apprehend that the reality of the
individual's existence, or of the actions he attributed to him, could
be of consequence, farther than the belief of it would tend more.

effectually to produce imitation. In his life of Pericles, he says that virtue has in itself an attractive power, and that its mere exhibition stirs up a desire of emulation. This may be true, but it is not the spirit in which a biographer, or historian, should set out. He ought not to be in search of virtuous examples, but of truth. To turn over the pages of history in order to white-wash the characters we find there, is not to teach "philosophy by examples," but to eulogize the cardinal virtues under "proper names." The investigation of truth will much more essentially serve the cause of virtue, than any partial representation, which eagerness in looking for, and the difficulty in finding, the virtues personified, might lead him to create. Plutarch himself confesses the difficulty of discovering perfect specimens of virtue, and, in the absence of them, recommends that the brilliant parts of a character be set in a full light, and the defects thrown into the shade. Plutarch is like the artist who, having to draw the portrait of a prince who had lost an eye, k him in profile.

One of the other motives already adverted to, that Plutarch had in writing, which alone would lead us to receive with caution his representations, is, that he was anxious to exalt the same of his native country by an advantageous comparison of its great men with those of Rome. He saw its degraded state, and its small political consideration; his "amor patrix," of which no man ever felt more, was wounded and indignant; he burned to show that Greece had once been the superior of Rome, if not in national conquests, yet in individual greatness. He had also another motive; he was an ardent lover of republicanism; his little Cheronæa was a republic, and he the first man in it. He knew little of that form of government practically, or he would not have attempted to dress it out in such engaging colours. In common with his contemporary countrymen, and even with the present degenerate race that boust themselves atleir descendants, he looked with a jealous eye on the despotic power of his masters. They were all proud of their descent, and could talk loud enough, if they could do no more, of the good old times of Marathon and Salunis, Plutarch, in some of his 'clives," is a warm advocate of democracy; and it was doubtless with the view of indirectly recommending his favourite form of government, that he chose some of his "lives." Mi. Mitford, in his "History of Greece," has mentioned this, and

added the similar case of certain French writers, who, when restrained from meddling with the politics of their own country, eagerly vented themselves in discussions on the freedom, government, and measures of ours. Plutarch, from the time of Petrarch, when I believe is nearly the first that quotes him, on the revival of literature, down to the days of Rollin or even of Gillies, has been extensively held as one of the best authorities, not only for historical facts, but also for their causes, and the order of time in which they happened. He has been cited with Thucydides and Xenophon, and his evidence has been balanced against that of these excellent Plutarch never intended this; and and trust-worthy historians. before his admirers held him up as the most authentic as well as the most entertaining writer, they should have inquired what pretensions he himself advanced. It would be exaggerating to say that our reliance on Plutarch is, as if 1800 years hence the "historical novels," as the phrase is, of the present day should be quoted for the history of Courts, and the private lives of individuals. we may observe that a similar mistake has been made with regard to the Cyropædia of Xenophon, as to the "lives" of Plutarch. Xenophon's life of Carus is not history, though it has been esteemed such: it is the model of an excellent prince, as the "lives" commonly are models of excellent statesmen and generals.

The Grecian part of the "lives" of Plutarch is much more correct and to be depended upon than the Latin: this may be accounted for from the slight knowledge he had of that language, and of the authors who wrote in it; and perhaps from his taking less interest in the great men of a foreign country. The lives of Aristides, Cimon, and especially that of Pericles, as far as my observation goes, have the fewest of Plutarch's prevailing, faults; but even here, how many of the qualifications of the instructive biographer and historian appear to have been wanting? In every work either of history or biography, a constant attention ought to be paid to chronology, and facts should be related in the order of time—each part of their subject should only take up so much . space in narration as it is relatively important—trifling and disgusting fables, and irrelevant matter of every description, should be avoided—the most probable causes should be assigned—and that connexion which is found between the various and different acts

of nations and individuals, if possible, should be vigilantly preserved. The philosophical historian should also trace to their source, the causes which led to the political and moral changes of the times. should show the point where a nation struck out of the road of its true interest, and where and how it returned. He has likewise to chibit the effects of the forms and administrations of governments on the manners, morals, and general character of the society for whose good they are created. It would not be too much to say, that Plutarch is deficient in each of these points. His chronology is uncertain, negligent, and confused. Gibbon has objected to Sallust, that, after reading the history of the Jugurthine war, no impression remains on the mind of the reader, of the length of time taken up by the transactions related. After perusing a life of Plutarch, it would in most cases be equally impossible, without previous knowledge, to form an accurate idea of the interval between the first and last act of the individual who is the subject of it. Scaliger. speaking and giving instance of Plutarch's chronological blunders. says: "Neque vero putes Plutarchum προληπτικώς hæc fingere-Summus cnim scriptor in his rebus (sc. chronologicis) puer est." To the arrangement of his materials Plutarch paid no attention; he read every thing that was to be read, and then sat down, gorged with an undigested, unruminated mass, to write the life and draw the character of a very just or a very virtuous, a very ambitious or a very cruel man, of an Aristides or a Phocion, of a Themistocles or a Sylla. He quotes from all quarters, for his memory was as strong as his reading was extensive: regardless of authority, he chuses the story for its effect, and so far from arranging his incidents in the order of time, crowds many that are perfectly detached, into the picture before him. He writes, says Bayle, as " qu'll veuille faire un Pocme épique."

Count Hamilton, in his well known memoirs of the Count de, Gramont, despises all attention to arrangement, and defends himself on the authority of Plutaich. Je déclare de plus, que l'ordre des tems ou la disposition des faits, qui coûtent plus à l'écrivaint qu'ils, ne divertissent le lecteur, ne m'embarrasseront guères dans l'arrangement—les choses qui le distinguent auront place dans ces fragmens, selon qu'elles s'offriront à mon imagination, sins égard

leur rang.—Qu'importe après tout par où l'on commence un portrait, pourvu que l'assemblage des parties forme un tout qui rend parfaitement l'original? Le fameux Plutarque, qui traite ses héros comme ses lecteurs, commence la vie des uns comme bon lui semble. This writing is in the very spirit of Plutarch, though assuredly, the "advancement of virtue" was not the motive to write in Count Antony Hamilton.

In an historian of Plutarch's age, nothing can be more disgusting, than the pages filled with details of oracles, dreams, and augurics; which be interprets with all the gravity of a priest of Delphi, instead of showing how far they were believed, how far engines of He scarcely seems aware that they were often the tricks of priests, and of the masters of priests. He disbelieved the existence of the gods of his country, and yet mever doubts their, cracles. They were striking characteristics of the manners of the times, and as such should be described—they had consequences, and should therefore be mentioned as causes. But not such consequences as Plutarch sometimes attributes to them, can we conceive them to have had. Can we suppose Cimon to have been on the point of abandoning the expedition to Cyprus on account of the vision of the barking dog, which Plutarch tells us how the augur twisted to foretel his death? Was it for the philosophical Plutarch to have related that Cimon was seriously affected by the ill-omened labours of the busy ants, who had contrived to accumulate the clot of blood on his great too! In Plutarch's puerile treatise against Herodotus, he inveighs against that historian for the introduction of what he calls calumnies, and remarks "that the excursions and digressions of history should be allowed chiefly to fables and antiquities, and sometimes eulogies." It must be on the strength of this, that he introduces the disgusting story of Peripoltas in the beginning of the life of Cimon, and the discussion on the ram s head with one horn sent from the farm of Pericles, with numberless others equally interesting and relative. It was not, as I have before mentioned, Plutarch's object to investigate historical truths, so that it is only very seldom, and that too in points that have been before discussed, or in some antiquarian disquisition, that he enters into that office of the historian which consists in comparing disagreeing testimony, in examining the prejudices, circumstances,

and opportunities of the writers whom he consults, and in extracting the truth by comparison and inference, in striking out fire, to use Bolingbroke's metaphor on a similar occasion by the collision of flint and steel.—We might have been contented and instructed without any profound assignation of cause, or deduction of consequence, if Plutarch had given but a clear and veracious narration of events in their natural order. But even here he is wanting. If this qualification had belonged to him, it may be that he would not have been so popular, but he would have been more useful—we might then have dispensed with what M. Bougainville complains is not to be found in Plutarch, "cet enchaînement houreux, ces liaisons naturelles, qui conduisent d'un fait à un autre." He goes on to say, "Les vies des hommes illustres sont des tableaux estimables par le coloris, mais peu corrects, et où l'expression est supérieure à l'ordonnance."

The duties of a philosophical historian are perhaps more than we should demand of Plutarch; as we find them rarely fulfilled, if ever, by the celebrated writers that preceded him. The "philosophy of history" is a modern term which I believe had its origin with Voltaire. It is the essence extracted from the experience. of past times—it is in the hands of a skilful historian to the administration and government of nations, what anatomy is in the hands of a skilful surgeon to the preservation and recovery of individual health. The nations gone by are dissected for the use of the nations in being, and those yet to come—the diseased parts are pointed out, the effects of circumstances and local habits are demonstrated, and the constitution and formation of the frame are exhibited. We learn what may, when it is necessary, or may not be lopped off without danger to the vital functions, and the mode of doing it: in the composure of the "theatre," and in the apathy of our subject, we practise experiments and gain knowledge to be laid up for use against the hurry and agitation of reality. As the ancient surgeons and physiciaus were ignorant of important points where anatomy would have enlightened them, so the historians of antiquity, because they had read or studied few histories of the rise and fall of empirer and states, are totally deficient in the "philosophy of history." It is surprising what little notice they take of

Millar's Disquisitions, and Le Clerc's Hist. de Médecine.

the increase of civilization, the spread of knowledge, or the amélioration of society in general—much less, of the causes which produce 'them—dil they did, was to leave a few isolated facts, of which the ingenuity of modern times has made a considerable use. The science of government and political economy, from the chimerical schemes of Plato, and the few scattered hints to be found in the politics of Aristotle, appear to have been unknown in their times. We have from some of them admirable narratives of facts in their histories, as we have exquisite copies of the human form in their sculptures. But an ingenious and eloquent writer has said, that the Grecian statues want gusto; because, " "the sense of perfect form occupies the whole mind, and hardly suffers it to dwell on any other feeling." The excellence of these statues consists rather in the exquisiteness of imitation and in the perfection of the "bean idéal," than in the expression of taste, sentiment, and feeling. Thus the excellence of the best ancient histories consists in being an almost perfect transcript of wars, battles and sieges, as they appeared to the eye without appealing to the mind. I he instruction however to be derived from battles and sieges, is soon exhausted-"Thus history," sags Lord Bolingbroke, "true or false, speaks to our passions always: what pity is it that even the best should speak to our understandings so seldom!" 2 H.S.

Dn the Study of History, I. 13.

see through the emptiness and futility of the Philosophy in vogue, and to conjecture that useful knowledge must be raised on other foundations, and built up with other materials, Than had been employed through a tract of many conturies backward."-At twenty-eight, we are told "that he gave full scope to his conceptions. surveying the state of learning, observing its defects, and imagining the proper methods to supply them. This he first attempted in a treatise which he entitled THE GREATEST BIRTH OF TIME."-And at the age of forty-six he published his Cogitatu et Visa, the prodromus of his Novum Organum; and other writings called philosophical.—" Upon the whole," says Mr. Mallet, " he was not only well acquainted with every thing that had been discovered in books before his time, and able to pronounce critically on those discoveries: he saw still farther; and at the end of his treatise de Augmentis Scientiarum, has marked out, in one general chart. the several tracts of Science that lay still neglected or unknown."

That the capacities of individuals to acquire information are very unequal, and that the natural powers of Bucon were very great, will readily be admitted; but that a boy of sixteen should in less than four years have made himself so completely master of the circle of liberal arts, as to entitle him to judge of the excellences or imperfection of the philosophy then taught, cannot possibly be true: and we find evident marks in his works that his acquisitions were by no means of the high order described by his Historian. There is nothing in the writings of Lord Bacon to show that he was acquainted with the Philosophy of the Greeks, otherwise than through the medium of Latin translations; or that he had ever studied these so far as to comprehend the general principles upon which that philosophy is founded. If, educated in the Greek language, Aristotle studied under Plato and other great masters Is nearly twenty five years before he undertook the task of teachng, we must suppose that youth inspired, who at sixteen has conquered all the difficulties of the language, and accurately studied a system of Logic and phylosophy so difficult of acquisition.—But Bacon had to study the Latin as a foreign or rather as a dead language—the Greek Muthematics in the more extended sense-Natural philosophy-Logic-Rhetoric-and other branches of Science then making up the academical course at Cambrage; and, NO. XXXII. VOL. XVI. Ct. Jl.

if we believe his historian, he had studied all these, and saw the Intility of the Philosophy then in vogue, and conjectured that knowledge must be built upon other foundations.—In the work already mentioned, the Cogitata et Visa, he finds fault with Aristotle for making use of the Syllogism in his books de Natura;—"Atque de Syllogismo qui Aristoteli oraculi loco est, paucis sententiam claudendam, rem esse nimirum in Doctrinis quæ in opinionibus hominum positæ sunt, veluti moralibus et politicis utilem, et intellectui manum quandam auxiliarem: retum vero naturalium subtilitati et obscuritati imparem et incompetentem. Nam Syllogismuni certe ex piopositionibus constaie, propositiones ex veibis, verba notionum sive animi conceptuum testes et signacula esse. Quamobrem notiones ipsæ, quæ verborum animæ sunt, si vagæ, nesciæ, nec satis definitæ fugunt (quod in Naturalibus longe maxima ex parte ficri consuevit) omnia ruere."—In this passage we see that Bacon did not know in what manner Aristotle had applied the syllogism to physics, for both he and his master Plato expressly declare that reasoning can only be convincing when confined to genus and species, but that of individuals which are infinite there can be no science, because there can be no correct definition or As far as correct Definition is to be obtained in comparison. Physics the syllogism is applicable, and when Definition is incorrect the syllogism can be of no use either in morals or politics. It is true that of tastes, colors, smells, &c. we can give no accurate definition in words, although, imperfect as language is, we may so far describe even these so as to give those who taste, see, and smell, some idea of our meaning; but in the contemplation of nature, and prosecution of every art, we unavoidably syllogize, and hold it as incontrovertibly true that like causes will produce like effects. Definitions are certainly necessary, before we argue, or come to any decision on which we may rely as true; for until those engagein dispute know that they speak of the same thing, and use well understood common terms, no satisfactory result can be expected. Cicero says, it is possible "tribucido in partes, latentem definiendo explicare:", and again adds, " Hæc pateractio quasi rerum opertarum cum quid quidque sit aperitur-definitio. est;" and although to us the essence of things is unknown, of this we must be satisfied, that until by definition, disputants conceive one common object, all discussion must be in vaiu.—It is, however, a mistaken notion that

definition ought to include every particular in which the thing defined differs from others: for Aristotle confines Definition to the genus of what is defined—what it has in common with other things, and to the specific difference by which it is distinguished from other things, of like nature; for he adds, the differences of things are innumerable, because every thing is different from what it is not.

But when Lord Bacon says that definition and syllogism may very well apply to Opinions—but not to sensible objects, he very evidently uses words to which he had attached no distinct meaning. for opinion admits of no definition, being in itself nothing beyond imperfect ideas, which enable us to judge of probability, or improbability; whereas clear and perfect ideas amount to real science. when the mind rests satisfied in the discovery of the Truth. here it may be observed that three Greek verbs, each frequently translated "intelligo," according to the analogy of the Language and usage of the most accurate writers, ought to be very differently The first is Niew, which signifies, I revolve in my mind, I think of a certain subject, and make use of the discursus mentis; διάνοια, in order to arrive at the truth, but the process is yet incomplete. The second is Eldéw, a verb not in use in the present Tense, but which retains its place in our Levicons, and in many tenses is of frequent occurrence, and variously rendered—scio, intelligo, animadreto, &c.; but no one word in the Latin Language will convey its full meaning, for it merely relates to the knowledge we acquire from external form, or appearance; as the Eidwhov is the effigies or representation, as far as relates to external form, of (e. g.) a man-but is in fact essentially different. The third verb alone denotes full and perfect knowledge as fur as it may be acquired by hur fan beings, and denotes that the process is complete, that by reasoning a man has arrived at where he may stop and safely say, 'Επίσταμαι—' I know;" and έπιστήμη των όντων is a comprehensive Definition of Science in general." It is therefore evident that there can be no Definition or Science of things imperfectly known, . or of what is infinite, and that to speak of definition as applicable,

The writer is aware that waver, itsour, in or ign, are used in various acceptations. He merely gives the above observations as agreeable to the analogy of the language, and to some of the best authorities.

to matters of opinion is in truth an absurdity; as it also is to say that the Syllogism is useful only where the Ideas are yet imperfect, and that connected icasoning is not useful in the investigation of the phænomena of Nature Lord Bacon, however, sets out with the assumption that there really exists a Science of the infinitely varied forms and combinations of Matter, and that by repeated experiments on those combinations we may arrive at general laws of nature or the science of Universals. He admits that Plato was a superior man, "altions ingenit," but he adds that whoever will attentively consider his works must see that he was very little solicitous about natural philosophy, and certainly Plato was not to be expected to enter into the experimental philosophy of Bacon, as we know that he held particular experiments to be the business of the artisan, and enjoused his pupils not to enter upon the stray of what was in its nature infinite, and from which no general principle could be derived. Of the reasonableness of this rule we shall easily be satisfied when we consider that of all the human countenances that have appeared on earth, perhaps no two were ever exactly alike, no two blades of grass-or sands upon the sca shore, although hum in countefiances, grass, and the sauds of the sea, may be generally described with their specific differences. The various forms of sensible objects, their modifications and combinations, niight occupy the hunian mind for ages, and without the possibility of airiving at first principles or the general Lines of Natine, for the mind would it us be employed in the pursuit of what is unattainable.—It is surprising that Bacon could bring himself to believe that in ancient times no experiments were made in Natural philosophy, with so many and striking proofs before his eyes of the excellence of their works of Art —the stuper dous works which their skill in Dynamics enabled them to construct, the accuracy of their works of Science, and the taste displayed in whatever is bequiting. Yet one of his conclusions is " quare risum est et neque in Gracotum, mque in novorum hominium placitis, peque fin Alchymiæ ant naturalis magaze traditic nibus, aliquid invenir quod ad opes humanas majorem an modum augendas spectat. Itaque hac piuma vel obliviom devovenda esse, vel popularibus studiis permittenda, dum veii scientiarum filii alio cursum dingant."

Cogitata et visa. Elzivir 1653. Duod.-p 23.

The exact meaning of the words "opes humanæ" is not very evident, as they are here used by Bacon. It is no doubt true, that the Greek philosophers did not teach how wealth is to be acquired: —but the greatness and splendour of antient Athens and Rome the riches and possessions of many of the inhabitants—and the luxury which at length proved fatal to both, show that, while the Greek philosophy prevailed, the means of acquiring wealth were fully understood and more successfully practised than they have been by those who, adopting the notions of Bacon, are styled by him " veri fili scientiarum."—That the philosophy he recommends is confined to objects of sense, appears from his censure of Plato for having mingled theology with his philosophy; and of Aristotle, for his application of logic to the phænomena of nature. higher philosophy, which treats of what is immutable, he designates by the barbarous word notionalis, which he says, is always uncertain; yet he uses the word "notio" for idea, when he says, "notiones ipsæ verborum animæ sunt;" and of these he admits that they may be distinct and well defined, so that it is difficult to discover what meaning he attaches to the word; and probably this vague expression had appeared objectionable to Sir Thomas Bodley, who informed him that some of his phrases would hardly pass current in the world. His barbarous, and sometimes affectedly mystical, style forms the most complete contrast when compared with the plain didactic manner of Aristotle, whose language is never figurative or mysterious, although, from the conciseness of his expressions, they frequently stand in need of illustration. we find his biographer commends his style as excellently suited to the subject; and, what is still more extraordinary, he affirms that he introduced a new and better sort of logic—rejecting the syllogism as an instrument, rather hurtful than serviceable to the invesrugation of nature, and using, in its stead, a severe and genuine induction.

"This induction, (he says,) is not the trivial method of the schools, which, proceeding on a simple and supplicial enumeration, pronounces at once from a few particulars exposed to the danger of contrary instances: but an induction that examines scrupulously the experiment in question, views it in all possible lights, rejects or excludes whatever does not necessarily belong to the subject;

and then, and not till then, concluding from the affirmatives left. A crowd of instances might be brought to show how greatly this method of inquiry has prospered in the hands of the moderns; how fruitful it has been of discoveries, unknown and unimagined by antiquity. But I will mention one that may stand in place of many: the optics of our immortal Newton: where, in a variety of experiments, he has analysed the nature and properties of light itself, the most subtle of all bodies, with an accuracy, a precision, that could hardly have been expected in examining the grossest and most palpable: from whence, by the method of induction, he has raised the noblest theory that any age or country can show." This sounds very magnificently, but examined more closely it will appear, that the writer had not thought so correctly as he ought before he pronounced so decidedly on the merits of Bacon, as a philosopher.

It has already been observed, that Lord Bacon believed the syllogism to be chiefly useful in matters of opinion, and that he appears to have been unacquainted with the manner in which Aristotle applies it in physics, and, in fact, did not know what the word philosophy was understood to signify among the antients—believing, as Mr. Harris expresses it, that truth is only to be ascertained by means of the alembic or air-pump. He speaks of his induction as a new mode of discovering truth—"via vera sed intentata," and in many parts of his writings he represents Aristotle and Plato as improperly applying logic and the syllogism to natural science, of which he makes repeated experiments the basis.² If in

Life of Lord Bacon. London, 1768. duodecimo, pp. 121, 122.

The Edinburgh Reviewers affirm, that Bacon did not represent induction as a new mode of discovering truth. His words "restat sola inductio, via vera sed intentata," incontestably prove, that he did claim the merit of linging first recommended this method of acquiring knowledge. Dr. Reid, in his Analysis of Aristotle's Logic, (Edin. Edit. 1806. pp. 140, 141.) says, After men had labouted in he search of truth near two thousand years, by the help of syllogisms, Lord Bacon proposed the method of induction, as a more effectual engine for that purpose. The art of induction, first delineated by Lord Bacon, produced numberless laboratories and observatories, in which nature has been put to the question by thousands of experiments, and forced to confess many of her secrets that before were hid from mortals."

the complete circle of science, which his biographer informs us he ran through in four years, had been included the rudiments of the language and philosophy of Greece, he would have known that induction was used by these philosophers as the foundation upon which the syllogism is reared. Aristotle expressly says, ή μὲν δὴ ἐπαγωγὴ ᾿Αρχή ἐστι καὶ τοῦ καθόλου ὁ δὲ συλλογισμὸς ἐκ τοῦ καθόλου. Moral. Lib. vi. c. 3.

In many parts of his philosophical writings he mentions the inductive mode of reasoning as the clearest, the most convincing, being the most easily apprehended by sense; and therefore in common use. ἔστι δὲ ἡ μὲν ἐπαγωγὴ πιθανωτέρα καὶ σαφεστέςα, καὶ κατὰ τὴν αἴσθησιν γνοςιμωτέςα—καὶ τοῖς πολλοῖς κοινόν. Τορίτα, Ι. c. x.

Many passages might be cited from the writings of Aristotle and his commentators, to prove that induction was in common use among the ancient philosophers, and that there is not the least foundation for the opinion entertained that it was first pointed out by Bacon.

The decay of the Greek language, the mistrauslations, and absurd comments of the schoolmen, had thrown discredit upon the writings of the Greek philosophers before the time of Bacon, and as it seems evident that what he knew of these writings was derived from bad translations, it is not surprising that he rashly condemned what he did not understand. He appears to have believed that, before his time, no efficient means of acquiring knowledge were in use; and, indeed, he tells us very plainly that he believed mankind must necessarily become wiser, as the world grows older; for, says he, "in the remoter ages of antiquity the world was in its infancy." How would he account for the dark ages; bow for

Had Dr. Reid been acquainted even with the epitome of Diaconess, he would have known, that by induction we form propositions, and from propositions the conclusion, which perfects the syllogism. "Ωσπις δί, τάντος λόγου στοιχοῖα τὰ γρέμματα, ἐκ δὶ τῶν γρεμμάτων αὶ συλλαβαὶ, ἐκ δὶ τῶν συλλαβῶν δ λόγος οὕτω πάντος συλλογισμοῦ ἀρχὰκιδίστικα μὶν οἱ ὅςοι, ἰχ δὶ τῶν ὅρων προτάσους, ἐκ δὶ τῶν ἀρχὰκιδίστικα μὶν οἱ ὅςοι, ἰχ δὶ τῶν ὅρων προτάσους, ἐκ δὶ τῶν ἀρχὰκιδίστικα μὶν οἱ ὅςοι, ἰχ δὶ τῶν ὅρων προτάσους, ἐκ δὶ τῶν ἀρχὰκιδίστικα μὶν οἱ ὅςοι, ἰχ δὶ τῶν ὅρων προτάσους, τὸ συμπέχασμα. Frolegemenon in Philosophiam.

^{&#}x27;De antiquitate autem, opinio quam homines de ipsa fovent, negligens omnino est et vix verbo ipsi congrua. Mundi enim senium et grandævitæ, pro antiquitate vere habenda sunt: quæ temporibus nostris tribui debent, non juniori ætati mundi, qualis apud antiquos fuit. Illa enim ætas respectu

the deplorable ignorance of the Egyptians once the most learned and scientific people on earth? Are the inhabitants of Italy now more learned than in the time of Trajan? or those who inhabit the soil of antient Greece better informed than in the time of Alexander?—In this instance the reasoning is bad, for mankind are easily diverted front the laborious pursuit of true science by pretenders to new inventions, who, ignorant of what has been taught and known before their time, profess to teach how to acquire knowledge by shorter processes, and easier means, than have been formerly used. By such means the philosophy of Aristotle has seven several times fallen into disrepute, and as often regained its pristing reputation, within the last two thousand years. Lord Bacon's reasons for the preservation of the writings of Plato and Aristotle, and the long prevalence of their doctrines, must be particularly noticed for their singularity. " Quod de cessatione antiquarum philosophiarum post Aristotelis opera edita, homines cogitant, id falsum est; diu enim postea, usque ad tempora Ciceronis et secula sequentia manserunt opera veterum philosophorum. Sed temporibus insequentibus ex immdatione Barbarorum in imperium Romanum, postquam doctima humana velut naufragium perpessa ert; tum demam philosophia Aristotelis et Platonis tanquain tabula ex materia leviore, et minus solida per fluctus temporum servatæ sunt." Nov. Org. aphor. lxxvii.-In this passage Bacon asserts, that the philosophy of Plato and Aristotle did not iminediately take place of other systems then taught; that the works of the antient philosophers remained till the time of Cicero, and

The analogical reasoning in the above quotation is utterly false, arising from the personification of the mundus, as if the wisdom of men must of necessity be proportioned to the age of the world they inhabit.

nostri antiqua et major, respectu mundi ipsius nova et minor fint. Atque revera quemadmodum majorem rerum humanarum notitiam, et maturius judicium ab homine sene expectamus, quam a juvene propter experientiam, et rerum quas vidit et audivit, et cogitavit varietatem et cepiam: eodem modo et a nostra atate (si vires suas nosset, et experiri, et intendere vellet,) majora multo quam a priscis temp ribus expectari par est; utpote ætati mundi grandiore et infinitis experimentis et observationibus aueta et cumulata. Authores vero quod attinet, summa pusillanimilatis est, authoribus infinita tribuera. Recte enun veritus temporis filia dicitur, non authoritatis."

even the following ages. That the books of other philosophers were in existence in the time of Cicero we know, but we also know that the philosophy of Plato and Aristotle prevailed over every other system before the death of Alexander; and Cicego himself informs us, that he regards Aristotle as the first of philosophers, unless an exception were made in favor of his teacher Plato. Of Aristotle he says, that he was "vir summo ingenio, scientiæ copia.--vir siugulari ingenio et pene divino-longe omnibus, excepto Platone, præstans et ingenio et diligentia." In another place he says: "Aristotele nemo doctior, nemo acutior, nemo in rebus vel inveniendis, vel judicandis acrioi." Be it observed, that Cicero had actually read the works of Aristotle, and justly complains, with Lucretius, that the Greek philosophy could not be accurately ex-, plained in Latin, "propter egestatem linguæ." But Bacon makes no complaint of that nature, but proceeds first to censure the Greek, whose works he had certainly never studied in the language in which they were written, and then to write on philosophy in a species of Latin altogether barbarous; using terms, "which would have made Quintilian stare and gasp," and Cicero could not have understood, derived, as most of them are, from the English. -In the above passage the name of Cicero is mentioned in such a manner, that an inference might be drawn against the prevalence of the philosophy of Plato and Aristotle, because it is said, the writings of the autient philosophers were still extant in his time, and for some ages; but in more than fifty passages in the works of Cicero, the names of the two Greek philosophers are mentioned in terms of the highest admiration, as having far excelled all other philosophers. He mentions the works of the more antient philosopliers as extant, and certainly had an opportunity of ascertaining their merits, and comparing them with those of the peripatetic school, to which he gives the most decided preference. The reason Bacon assigns for the preservation of the works of Plato and Aristotle, after human learning had, as it were, suffered shipwreck, that they were " ex materia levioroet minus solida,"-aud, therefore, were preserved-while he insimuates that works of much greater, value perished, is disingenuously urged, is contrary to the well ascertained fact, and besides manifests a strange abuse of figurative language. It is not true that the writings of these philosophers

then first came into repute (tum demum) when learning was nearly lost; for during the life of Aristotle himself, the peripatetic philosophy was in the highest repute, and before his death he gave over his whole library to his pupil Theophrastus, who succeeded him. Theophrastus, adding his own library to that of his master, transmitted it to Neleus, and he to his descendants ιδιώταις άνθεώποις, who, for fear of the seizure of the books for the library of Pergamus, hid them under ground, κατά γης έκουψαν έν διώρυγί τινι. In this concealment it is supposed that the works of Aristotle suffered much, and many were lost. They were afterwards sold to Appellico, and his books having been taken, upon the occupation of Athens by Sylla, they were carried to Rome, and put into the hands of Tyrannion the grammarian; and, after him, into those of Andronicus Rhodius, whose commentaries upon the Ethica Nicomachea are still extant.—If Bacon, then, intended to assert that the writings of Aristotle first came into repute in an illiterate age, and were preserved as being of a more trifling nature than other philosophical works, no longer understood by the people, we have the most complete proof from the testimony of Plutarch, Strabo, Galen, and a multitude of the most learned men, from Aristotle's own time, to the fifth and sixth centuries of the Christian æra, that the assertion is utterly unfounded. These works that have come down to us were studiously preserved by the most learned men for successive ages, and were ever esteemed as the most valuable work, of antiquity, while the language in which they are written was understood, as the writings of the Alexandrian commentators sufficiently show. The idea that works of real merit are more readily forgotten than those of a more trifling nature, as stone will sink to the bottom of an overflowing river, while straw and subbish float onwards, is incongruous; and we have seen that the age in which it became necessary to preserve the works of Plato and Aristotle by extraordinary means was by no means an age of ignorance, compared with those that have followed; and we may give credit to Cicero, when he assures us that the loss of other philosophical works is not to be regretted, while we preserve those of the two great musters.

The language of Bacon is barbarous in the extreme: for in writing on what he calls philosophy, he by no means takes the

trouble to adhere to the philosophical language of the Romans, but introduces words, to which he may have attached some meaning. but which are not to be found in any classical author, or any Notio-notionalia-suitus-ultimitasrespectable dictionary. identitas-imaginativus-spontaneitas-limitaneus-virtus coitira-forma calidi—these, and hundreds of other words atterly barbarous, show that he was not qualified to write tolerable Latin, and that Addison ought to have been ashamed of the extravagant compliment he paid him, when he said, "that he had the sound. -distinct, comprehensive knowledge of Aristotle; with all the beautiful lights, graces, and embellishments of Cicero." Bacon, as far as we can judge from his writings, was ignorant both of the language and philosophy of Aristotle, for his quotations are from the Latin translations; and if Addison had intended to turn him into ridicule, he could not have done it more effectually, than by attributing to him the elegance of Ciceronian Latinity. The knowledge of what has been done and known before our times, is absolutely necessary, before we propose to extend the bounds of human knowledge, or write a book, as Lord Bacon did, " de augmentis scientiarum." Cicero very justly observes, " non nosse quæ fuerunt ante nos, id est esse semper puerum," and that Lord Bacon did not know what had been done in philosophy before his time, when he affected to despise writings he did not understand, as his admirers do to the present day, must be apparent to all who have studied the works of Plato and Aristotle, and at the same time have looked into his. But the fact is really singular, that while this statesman, who, as Harvey observed, "philosophized like a Lord Chancellor," is eulogized in our universities, very few of his admirers appear to be acquainted with his writings, or with the palpable fact, that induction was in common use thousands of years before he was born. The writer of this sketch pointed out to a member of one of our universities, a great admirer of Bacon, the absurde ities he has collected concerning motion, and he appeared surprised; but still, unwilling to admit that they amount to mere nonsense, resorted to the authority of Dr. Reid, who had said, he was much . inclined to measure every man's intellectual powers by his estimation of Lord Bacon. It has already been shown (No.U.) that Dr. Reid, by his own confession, knew nothing of the physics of Aristotle, and very little of his logic, finding both very dry reading; and it is more than probable that he was unacquainted with the fact, that induction was in use before the time of Bacon. Dr. Reid was, no doubt, a very worthy man; but somewhat narrow in his notions of philosophical investigations, for he admitted that he could not disprove the arguments of Berkely, as a philosopher, but thought himself bound to resist them as a clergyman; and, according to this rale, he may have thought it right to give a preference to the philosophical writings of Bacon over those of Aristotle, because his Lordship was a Christian, and the Stagnite a Heathen; but the most pious divine may at all times safely follow truth, which never can prove injurious to the interests of true religion. Such authority might be strengthened by the exaggerated praises of Cowley:

Bacon, like Moses, led us forth at last,

The barren wilderness he passed:

Did on the very border stand

Of the blest promis'd land,

And from the mountain top of his exalted wit,

Saw it himself—and showed us it.

But Moses knew the country he was in, he had his reasons for leaving it, and he knew that a better settlement was provided for the people, and the route he had to pursue in order to reach it in safety. Bacon, without knowing the principles of the philosophy he condemned, proposed "to put nature to the torture, so that she might be brought to confess her secrets,"—and invited his countrymen to set out on a voyage of discovery in science, without any defined object. Experiments have been going on since his time, and new combinations and modifications of matter may be found for ages yet to come, but the promised land, the certainty of science, which the poet assures us he saw, and pointed out to others, we have not yet attained.

Pope also contributed to raise a false character for Bacon, by designating him "the greatest, wisest, meanest, of mankind," for none of these epithets are applicable to his character. With his writings and history before us we may reasonably conclude, that he was a man of good natural parts, but no considerable learning; that his education was held to be completed when it ought to have been beginning, and that he proposed the publication of

his "Greatest Birth of Time," when he ought to have been making himself acquainted with what time had already produced.—With that obliquity of intellect which considers fraud as something that may prove ultimately advantageous, he is certainly not entitled to the appellation of airest of mankind, and it is to be feared that corrupt judges will not leave to him the distinction of being the meanest. In like manner Pope considered Newton as the greatest philosopher that ever appeared; and his celebrated distich is repeated at the present day:

Nature, and Nature's laws, lay hid in night: God said, let Newton be, and all was light.

In these lines there is something of absurd impiety; but they have contributed, for nearly a century, to keep up the idea that the geometrical and astronomical rules and calculations of Sir Isaac Newton form the very basis of true natural philosophy; and it is only of late that men of science begin to be sensible that his authority is not infallible. The calculations of Sir Isaac are admitted to be correct; and he was a man of excellent character, having no intention to deceive, and really believing what he gave to the world as true: but although his conclusions be well founded, it by no means follows that his piemises must be correct, for many natural appearances are equally well accounted for upon very different hypotheses.—This subject, however, will be resumed at another opportunity.

To return to the philosophy of Bacon. When we ask, what has Lord Bacon done to entitle him to consideration as a philosopher? the answer is, he introduced the inductive method of reasoning from experiments. What is inductive reasoning? It is proceeding from one ascertained truth to others, not at first evident, and this, it is supposed, mankind were not in the habit of doing until the time of Bacon. It has already been shown, that induction was in common use many ages ugo; and without reasoning by induction, we can neither obtain a knowledge of the material world, nor form rules for the regulation of the ordinary affairs of life. When we observe, that a proposition, affirming or denying any quality of a particular material thing, to be true of algreat number of particulars of the same species of things, we infer that it is true—of all and we infer that it is not only so at present, but

will continue to be so in time to come, and has been so in time past." It is also in this manner that we reason concerning the affairs of men; for by observing that men placed in certain circumstances often act in the same manner, we assume it as a fact predicable of the phole species, that men placed in similar circumstances will act similarly. Without the use of inductive reasoning it is altogether impossible that men can derive advantage from experience, or that society can exist on any stable foundation. Every artisan uses inductive reasoning in the exercise of his art, and moral evidence is formed from a long continued observation of the actions of men, and the strong presumption that like motives will produce like actions. Induction enables us to form general ideas from particular instances, and this mode of reasoning we unconsciously use even in our childhood: a particular flame has burned the hand, or a false step has occasioned a severe fall from a height; and the conclusion is immediately formed, that all fires and precipices are dangerous and ought to be avoided. We find many of the inferior animals acting as if they reasoned in this manner, for if they did not, it would be natural for them to follow, on all occasions, the instinct of their nature, but this they will not do when danger is suspected.

> Cautus enim metuit foveam lupus, accipiterque Suspectos laqueos, et opertum miluus hamum.

Anglers are well acquainted with the fact, that after they have seen and killed one fish, no other will rise, or take the bait in the same spot for some time, unless such as may have accidentally arrived, after the former fish was killed; and even vermin, as rats, act with the greatest caution, and will rather suffer from want of food, than take it where they suspect danger. In short, it is by induction that we acquire the rudiments of knowledge; and it is astonishing that at a period when the dark ages were no more, men could be persuaded that it was invented by Lord Bacon. But although it is by induction that we acquire general ideas, a farther process is necessary to enable us to form general conclusions. Galen, a most emihent philosopher and physician, (whatever may be said by those who have never read his works,) says that the syllogism is that progressive reasoning, which, tertain thing, being

ascertained, a farther conclusion necessarily follows, at first un-known. Συλλογισμός έστι λόγος, εν ω τιθέντων τινών, ετερόν τι τών τιθέντων, κατ' ἀνάγκην συνάγεται, πρότερον ἀγνοούμενον. Here the matters ascertained, or, as we say, given, are ascertained by induction, and the syllogism is used as the means of more readily arriving at a general conclusion.

That the syllogism is the foundation of all geometrical knowledge is certain, for every proposition consists of a series of syllogisms terminating in a conclusion which we cannot conceive to be false, or, if we reason ad absurdum, in that which cannot possibly be true. In experimental philosophy it is more difficult to ascertain premises exactly; but in as far as that can be done, the syllogism is applicable and highly useful. "Some," says the learned Wolfius," " perhaps may wonder why I should cry up so much the usual syllogistic method, as a thing at this day in the greatest disrepute with every one. Let such know, that I am neither a blind admirer of antiquity, nor yet altogether unacquainted with modern discoveries: that my teachers, indeed, inspired me with contempt for the syllogistic manner; and that I, like others, have in my ignorance laughed at syllogism I own; but, upon maturer reflection, I found the matter otherwise than is generally thought; and now, out of love to truth, I scruple not with others, who are great men, openly to avow that, which is now exploded, from ignorance and simplicity, by those who never examined the matter with sufficient penetration.—I will show, by examples, that geometrical demonstrations are resolvable into formal syllogisms—that nothing is discovered in mathematics but by means of such syllogisms, and that in the other disciplines, we can never come to demonstrations but by the syllogistic method, for by it we obviate every error, even of the most subtle nature." He adds, that the whole of the algebraical calculus, by means of which so many discoveries are at this day made in the mathematics, and their kindred sciences, is performed by pure formal syllogisms; and adds, that in experimental philosophy such syllogisms lead to complete demonstration, and of this he gives several examples. See Logic, or rational thoughts on the powers of the human understanding, by Baron Wolfius. London, 1770, p. 74, et sequent.

We have here the authority of a truly learned man,—that is, learned

in mathematics and natural philosophy, —in direct opposition to that of Lord Bacon, who gives us his cogitata et visa, which may be truly rendered, his conjectures and conclusions formed from these conjectures, as a basis upon which true science is to rest.—When Wolfius, wrote, the writings of Bacon were generally known on the continent, several editions having been published in Latin, in various forms, but in his Treatise on Logic, he makes no mention of them, nor was it to be expected that he should—believing, as he did, that mathematics are indebted to ontology for their certainty; and that the first philosophy, in dignity and certainty, is that which Bacon calls notionalis et incerta.

The philosophy which the antients admired—and which Wolfius, who died not much more than half a century ago, held to be the foundation of all human knowledge, Bacon rejects for the very .-- son they assign for giving it a decided preference, viz. because it is general and abstract. "Axiomata infima (says he) non multum a nuda experientia discrepant. Suprema vero illa, et generalissima (quæ habentur) notionalia sunt, et abstructa, et nil habent solidi. media sunt axiomata illa vera, et solida, et viva, in quibus humanæ res et fortunæ sitæ sunt, et supra hæc quoque tandem ipsa alia generalissima, talia scilicet quæ non abstracta sint, sed per hæc media vere limitantur." Here we have a very convincing proof, that Bacon believed objects of sense, and the Proteus-like ever-changing forms of matter, to be the true subject of philosophy; while, on the other hand, the philosophers of antiquity deemed fleeting and perishable material forms, scarcely fit to be considered as subjects Philosophy, says Andronicus Rhodius, must necessarily afford the greatest pleasure, on account of its punty, and because its subject is abstract, imperishable, and ever the same: φαίνεται τοίνυν ή ζιλοσοφία θαυμαστάς έχουσα ήδονάς, διά τε την καθαριότητα και τὸ ὕλης ἀπηλλαγμένη καθάπαξιείναι, καὶ διὰ τὸ βεβαιον, ὅτι περί τὰ ἀχίνητα, καὶ ὡν αύτως ἔχοντα ἐνέργει. He adds, that practical

Wolfie philosoff unte, rege philosopho regnante, et Germanu plaudente, Athenas liallenses invisi. Voltaine.

When Voltaire was at Halle during the earlier part of the reign of the Great Frederic, the students presented their album, or memorial book, cutreating that he would write something in it, which he did as follows:

acience, the object of which is mere matter, must afford less sutisfaction to the mind, because it is liable to-infinite contingencies!

It has been already observed that the writings of Bacon came abroad at a time when Greek literature was on the decline, when the philosophy of Austotle was taught in barharius Latin, and so disfigured by gross mistranslation, as to leave no trace of the correctness and beauty of the original. Had it been otherwise, had Aristotle's precepts been delivered in his own language, and studied so as to be understood, it is impossible that the doctrines of Bacon could have been well received by men of education; and far less would they have been countenanced in our universities. The public would have seen at once the absurdity of listening to one, who at sixteen ventured to condemn what he could not possibly understand; for to acquire a competent knowledge of the Greek language and Greeian philosophy, years of diligent study are necessary when the follies and trifling pursuits of youth are over. But several causes concurred to give a certain fashion to the works of Bacon. He was a most servile flatterer, and pretended to appeal to the authority of the wretched pedant James, as to an infallible oracle. By this means he ensured his approbation; and as the king pretended to sit as umpire during philosophical discussions at the universities, then, perhaps, even more servile than when that of Oxford expelled Mr. Locke upon the mandate of his grandson, the royal approbation could not fail to have a nowerful effect in recommending the new philosophy, as it was called, of the Lord Chancellor. It was given out, that this new philosophy would do away the difficulties and tedious march of study; that the idea of the antients, that every thing really estimable is to be acquired with difficulty—yakenà tà xxxà-was founded in error, and that any man of genius, by trying experiments, mucht arrive at results far more important and useful them the wisdom of ages had yet discovered.

It was a saying of James,—" Let mathave the appointment of judges and bishops, and that shall be law and gospel which I please;" and it really appears, from the state of the universities at the time, that he could also mould philosophy according to his own fancy. After students had once heard, ex cathedra, that antient philosophy, and antient literature, were no longer deemed

NO. AXXII. Ct. st.

VOL. X. U

necessary to the education of a learned man, and that Lord Bacon had discovered the only real path to knowledge by a happy sagacity, which had detected the fallacies and sophisms of antiquity, we can easily anticipate the ulterior progress of the new philosophy. Not one student of a thousand has strength of mind enough, if his information justified the attempt, to call in question the authority of his preceptor—the antient philosophy, together with the language in which only it can be taught, were neglected—all was considered as visionary that could not be felt and seen-and Dynamics, Geometry, and Astronomy, began to be considered as the whole of philosophy. The establishment of a Royal society, which confined its discussions to these subjects, and numerous periodical publications, in all of which the inductive method, in experimental philosophy, was represented as a highly important discovery - cantributed to establish the reputation of Bacon, of whom the great majority expressed themselves in terms of high admitation, while very few took the trouble to examine his works with attention. Recently the exaggerated praises of this writer have almost come up to the fulsome panegyrics of Cowley and Pope. - We have been told, that " no man eyer united a more poetical style to a less poetical philosophy; and that one great end of his discipline is to prevent mysticism and fanaticism from obstructing the pursuit of truth." As to his style, it is affectedly mystical, but not one spark of the poet's fire is to be discovered from end to end of his works. the following lines, a version of part of the 104th psalm, as a specimen of his poetical style. The subject is, the great deep.

The fishes there far voyages do make,
To divers shores their journey they do take;
There hast thou set the great Leviathau,
That makes the seas seeth like a boiling pan.

A writer in the Edinburgh Encyclopædia says of his style, after necticing that his distinctions are often perplexed or indefinite, particularly with regard to physical and metaphysical science: that "his language also is destitute of precision, being extravagantly metaphorical, and also replete with unnatural conceits and obscure allusions. It is much more reprehensible than Aristotle's, which he has blamed for abounding in new words. His censure of the more eminent philosophers is expressed in the most acrise-nious

strain of scurrility. He was too ambitious of innovation, and too fond of paradox. In violation of his own rules, he often assumed facts without sufficiently scrutinizing the evidence on which they rested, and sometimes without any examination at all, and very frequently, in his attempts to account for facts, he new igently acquiesced in hypothetical principles, which had obtained a popular currency." This writer appears to be the first who has ventured fairly to characterize the writings of Bacon, while the Gentlemen of the Edinburgh school so extravagantly be-praise them, that they even admire his idola, specus, tribus, forl, and theatri—and find his mystical jargon dignified and significant. This part of the book so astonished poor King James, that he exclaimed, "that buik is just like the peace of God, which passeth all understanding." The which above-mentioned, after some very just criticisms on the writings of Bacon, adds, "that it must be allowed he had the merit of having bequeathed to the world a larger and more precious mass of sound logical instructions, deduced from his own reflections, than are to be found in the writings of all the authors who preceded him." It will be no easy task to reconcile the foregoing strictures with this conclusion; nor to point out any thing in the writings of Bacon that deserves the title of logical instruction, which he indeed affects to despise.

Of all the systems of philosophy that have prevailed at different periods, it may be truly said, that by their finits we shall know them. If, after trials for a century and a half to find out truth, and establish general principles by particular experiments, we must admit that we have failed, and can produce nothing in literature or science to bear comparison with the models of antiquity, we may rest assured that we pursue a wrong path in the pursuit of knowledge, and must recur to first principles, if we would escape that age of darkness which Sir Thomas Bodley predicted would be the consequence of the adoption of Bacon's suggestions.

Many obstacles, however, present themselves to the revival of antient philosophy, and of these the long-continued study necessary to understand the language is none of the least. If we would restore the antient discipline, the period of study must be much enlarged; and in place of completing a course of education at sixteen, a young man of good parts may at that age be able to enter

upon the study of philosophy, provided he has had the advantage of good instruction, and has acquired a general knowledge of the language, so that he may prosecute his studies successfully.

But those who agree with Bacon, that philosophy is not to be prized unless it tends to encrease the wealth and resources of mankind, will not easily be brought to see the excellence of that, which has for its object the discovery of truth, and the acquisition of knowledge; more especially as the pursuit is attended with difficulty, and the language of Hesiod concerning virtue may well be applied to true science;

Τῆς δ' ἀgετῆς ἱδοοτα---Θεοὶ προπάροιθεν ἔθηκαν [Αθάνατοι, μακρὸς δὲ καὶ ὅρθιος οἰμος ἐπ' αὐτὴν Καὶ τρηχὺς τὰ πρῶτον ἐπὴν δ' εἰς ἄκοον ἵκηται, 'Ρηϊδίη δ' ἤπειτα πέλει, χαλεπή πες ἐοῦσα.'

Another obstacle to the revival of philosophy, is the unwillingness with which men are brought to admit that they have been an error, and to admit that the precepts of their youth are to be abandoned in their old age.² By some of our professors such a recantation would be made with great reluctance; for having boasted of their ignorance of the antient philosophy for many years, and assured their pupils that it does not deserve to be studied, it would prove a most mortifying task, to make a palinode, and admit the error. However, these teachers will probably finish their course, undisturbed by the consciousness of having been mis-

The above lines from Hesiod lead us to inquire into the exact import of the word 'Agrain, virtue, which is used in various senses. Some lexicographic is, 'deriving it from 'Apre, Mars, render it heroic valour, and it is no doubt often 'used in that sense. But it would seem that it is sometimes used as denoting science, or knowledge, as in the above lines, and in the following beautiful ode of Aristotle.

^{&#}x27;Αρετώ πολύμοχδε ...
Γίνει βερτείφ ...
Θάςαμα πάλλεστον βιώ"...
Σάς περί παρθένε μορράς

led themselves, and the means of misleading others; but the hope is to be indulged, that the rising generation may be brought to see the degraded state to which science is reduced, and to contribute their endeavours to the revival of true philosophy. Of one thing they may rest assured, that no person capable of reading and comprehending the works of the antient philosophers ever hesitated in giving them a decided preference to the productions of modern times, but, as Bishop Berkeley observes, many an empty head is shaken at Plato and Aristotle, that never comprehended their doctrines; and more so flippantly condemn their writings, as those who can neither read nor understand them.

NOTICE OF

HIEROGLIPHICORUM ORIGO ET NATU-RA: Prolusio in Curta Cantabrigiensi (in Comitiis, quod aiunt, Maximis,) 111. Kal. Jul. MDCCCXVI. recitata, cùm Primum tulisset præmiorum, quæ ab Academiæ Legatis dari solent quotannis Senioribus, sic nuncupatis, Artum Baccalaurers. Conscripsit JACOBUS BAI-LEY, B. A. Coll. Trin. Schol. Cantabrigiæ, Typis ac Sumtibus Academicis excudit &c. Veneunt apud Longman & Soc. &c. [Pr. 3s. 6d.]

Amore the various prizes instituted at Cambridge for the advancement of classical learning, are four (perhaps, the most important, so far as relates to original composition) of Fifteen Guineas each, given annually by the Representative of the University in Parliament to two Bachelors of Arts of the second, and two of the third year's standing, for the best Dissertations in Latin prose, on subjects proposed by the Vice-chancellor and Heads of Colleges, somewhat (usually) within two mouths of the

the appellation of Members' Prizemen,—and are denominated middle or senior Bachelors, accordingly as they belong to the second or third year of their Bachelorship. It were to be wished that the period allowed for composing were longer; as, if the subject be extended over much ground, he who would hope for success cannot for that time think with propriety of giving his attention to any thing else. This is a point deserving of consideration: a candidate for these prizes being, generally, at the time of writing, not many months removed from a Fellowship-examination. If the period were doubled, the hours cut off from the ordinary occupations of the day might, of themselves, be nearly sufficient for these exercises; and the student be not so immediately compelled partem solido demere de die. As it is, he enters the lists for a Fellowship with a manifest disadvantage; and might, upon this account only, have to give way to an inferior man.

In some cases, where the merits of the competitors have warranted such a measure, a third prize has been awarded, of the like value with the others. This may, of course, happen either in the middle, or (as it did in the present instance) in the senior year. But one example has occurred, in which the same individual has been first of three in both years. The student was of St. John's

College.

The subject of the Dissertation before us, which our readers will remember to have seen registered in a former page of our work, is The Origin and Nature of Hieroglyphics; and is, of all others, one which furnishes an ample scope for investigation, as may be imagined from this simple truth: that, after all the discussions that have been brought forward from time to time upon it, by the literary of almost every European nation, so much as a single character (with the acute ingenuity of Warburton, and the extensive erudition of Zoega, a name but too little known in this country, to back the attempt) has not been deciphered with certainty upon any one of the numerous hieroglyphical monuments that remain. Even the monument of Rosetta furnishes no exception to this assertion, it being a doubt with literary men, [see the Edinburgh Review whether the hieroglyphics engraved on it are the representatives of things; or of sounds the exponents of things; in plainer terms, whether the key to this inscription be, or be not, what may be termed an hieroglyphical alphabet, - fof a kind with that Egyptian one, in which Plutarch informs us that the figure of the Ibis replesented the letter A, or with the Mermetic alphabet in Hammer's Hieroglyphics. .

This is, we believe, the first subject that was ever proposed to candidates for the Members' Prizes purely of a critical kind; it has been usual to confine these Essays to subjects moral or

political, or to such as are connected with the more elegant and ornamental parts of ancient and modern literature. It was proposed by Doctor Kaye, Master of Christ-College and Regius Professor of Divinity. The example, as was to be expected, has been followed; and the very next year the subject given to the menior Bachelors was of the same class.

As it is entirely without the compass of a publication like ours to give a minute and particular account of a work like the present, we shall content ourselves with scanning over its surface hastily, and, as we scan, with noting a portion of the framework for inspection, cursorily and in the rough. All we can do, and all indeed that it is the province of a Literary Notice to do, is to give our readers a general notion of the work that we have in hand. They who would have more, must go to the book itself.

Praise, like the precious metals, is only valuable where it is bestowed with proper limitations: and unqualified approbation is as the dust we tread upon. The best compliment that we can pay to the author of the Dissertation on Hieroglyphics, is to tell the literary world at large, what was told to the University, to which he belongs,—that the said Dissertation was rewarded with the first prize of three,—that, at the unanimous request and with the consent of the examiners (the Vice-Chancellor and Heads of Colleges), an impression of five hundred copies was printed at the University press free of expense, and presented to the author,—and that this distinction was never before conferred upon any successful candidate. This is a mere matter-of-fact statement: and this the most invidious man living cannot withdraw.

The book has no preface; and perhaps needed none. The title and dedication seem fully to supply the want of this. Of the dedication, which is very properly addressed to the examiners, it may be said with truth, that it is short without being defective, and

respectful without being fulsome.

It is well known that, previously to the time of Warburton, it had become a received opinion, that the hieroglyphic characters of the Egyptians were so many secret marks, instituted by their priests, to secure their doctrines from the prying eyes of the curious. This opinion had derived so much validity from the huge volumes of the Jesuit Kircher, added to the fact, that the priest-hood did in after-times employ these characters in that way, that nothing short, it should seem, of the penetrative sagacity of Warburton could have discovered the cheat. It was necessary to state this as a preliminary: and accordingly, in order that the main body of the Essay might not be burthened with the detail, our author has, not injudiciously, prefixed to the Dissertation an Introductory Epistle; in which the old notion that hieroglyphics are generally connected with mystery is exploded, and the trea-

From Warburton therefore as a basis, added to the more elaborate researches of Zoega, this Dissertation, as it professes, must be allowed to have sprung. The learning and research of the latter writer, of whom Denmark has reason to be proud, are indeed such as, in a manner, to have sifted the subject,—so far, that is to say, as relates to the testimony of antiquity. And upon that, and that only, what we are to know of hieroglyphics must depend. The display of materials, which, from a life wholly devoted to the study, he has been able to amass, is enough almost to stagger belief: and of this very rich fund, "pressed down," as it is; "and running over," our author, as was to be expected, has not scrupled

to avail himself at pleasure.

The opening pages of the Dissertation are occupied with a clear and sufficiently full account of the first stage of writing, which was by actual representation of the thing signified; and that not in the order, and after the arrangement, of what is usually termed written language, but clusteringly and by the group. This has been called Picture-writing. Specimens are recorded in the Dissertation as having been found in all the four quarters of the globe. Egypt, by reason of the superior genius of its inhabitants, was the first to make any material advance on the road to improvement; and accordingly, finding that in spoken language the ideas of man are connected, as it were, in a chain, they straightway set about framing a written language upon the same principle; which could only be effected by making every figure represent a distinct idea. The representations would then admit of continuity just as much as the ideas themselves. Thus, in the famous inscription mentioned by Plutarch as standing over the arch-way of Minerva's temple at San, the sentence QUI NASCERIS, QUIQUE IN-TERIS, DEUS ODIT IMPIETATEM, was expressed by the figures of An Infant, An Old Man, A Hawk, A Fish, and A River-Horse, taken in order; the ideas of Being born, Dying, God, Haired, and Impiety, being, by agreement, severally denoted by those figures. Again; in the inscription on Sethon's statue (Herod. 11. § 141.) the sentence EX EME TIX OPEAN, ETXEBHX **EXTA**, might possibly have been expressed by A Figure of Sethon pointing to himself, An Eye, and A Stork; the three signifying respectively the ideas of Sethon, Sight, and Duty, This is Hieroglyphical writing. Picture-writing is, where a person should send an account to his chief of a victory gamed, by an actual representation of the field of battle, the enemy flying, victors pursuing, &c. or of the extent of an enemy's fleet, by depicting the number of vessels; and the like.

But our limits compel us to be brief; and we shall have room.

to extract no more from the main body of the Dissertation, than what will suffice to present our readers with a sketch of the roun kinds of hieroglyphical characters (and this seems to be the most correct enumeration), as deduced from the celebrated passage in Clemens Alexandrinus, Strom. v. 2. p. 657. Potter's Edition.

1. The first is called the cyriologic, or proper, hieroglyphic; and is where the idea to be expressed is of something visible and capable of being represented picturally, and, for that reason, so represented. Of this kind are the figures of The Infant, and The Old Man, in the Saitic inscription. Here is no symbol; a symbol being the representation of one thing by the figure of another,

or by a figure that is not its own exclusively.

2. The three remaining kinds are symbolic. The first of these is called the proper symbolic hieroglyphic, and differs from the proper, or cyriologic, hieroglyphic, only in this; that the representation does indeed copy, or sketch out, the form of the thing to be expressed, as far as it admits of being copied, or sketched out; but cannot, in the nature of the form imitated, succeed in producing a perfect or exclusive imitation. Thus the Egyptians, when they would express the idea of The Sun, drew the figure of A Circle; of The Moon, A Crescent: where it is plain that the expression is incorrect; the circle being as correct a regresentation of The Full Moon as of The Sun, and The Crescent no representation at all of The Moon when Full. So far as these marks profess to imitate, they are cyriologic, or proper: as they full short of perfect and exclusive imitation, they are symbolic. Figures of this nature are therefore denominated by Clemens cyriologic symbolic hieroglyphics.

3. The next of the symbolic "hieroglyphics is the tropic: and hieroglyphics of this nature are the most common. Thus there was represented by Smoke; The field of battle by Two Hands, one equipped with a shield, the other with a bow: Agriculture by an Ox: where the figures of speech (as they are termed) or tropes, respectively employed, are, Metonymy, Synecdoche, and Meta-

phor.

4. The remaining symbolic hieroglyphic is called the enigmatic; and is distinguishable from the tropic hieroglyphic only in this; that the allusions are more implicated, and the tropes, by consequence, less obvious. Thus, The Sun was represented by a Beetle; The number five, by a Star; The Month by a Scrpent; and so on.

N. B. The difference between the cyriologic, the tropic; and the enigmatic hieroglyphic, may be seen at once, and in the same figure, in a passage from that curious relic of antiquity by Horapollo. He there informs us, that the figure of Isis, when written cyriologically, meant The Goddess herself; tropically, The Dog-star, because sacred to Isis; enignatically, The Year.

Of the notes, which are, perhaps, the most valuable part of the Dissertation, and most undoubtedly so with respect to the ful ture developement of hieroglyphical writing, we have not room to say what we wish. Those, however, in p. 52. and 64. cannot be passed over. From the sum of these we learn, that our author has. proved the obelisk, epitomized in Greek by Hermapion (see Amm. Marc. xvii. 4.) to be, not the Lateran, as Sir John Marsham was of opinion, but the Flaminian. This proof obtained, he has been able to compare the hieroglyphics and the Greek with effect. The result of which is, that he has actually succeeded in deciphering a sequence of not less than five hieroglyphic notes. The value of this discovery will be the more apparent, when we place before the eyes of our readers the following considerations:

1. That, although the works that have been written on the subject are of themselves enough to form a considerable library, this is the first example that has occurred since the days of antiquity of a se-

quence of hieroglyphic notes deciphered.

2. That, by identifying the Flaminian obelisk with the one used by Hermapion, and deciphering a part of it in consequence of that identification, more is to be expected from that obelisk than from the Rosetta stone; the Greek inscription upon that stone being evidently not a translation of the lieroglyphics, as appears from the repetition of a sequence of not less than forty hieroglyphic notes, first discovered by our author (see p. 72. note); no corresponding repetition being found in the Greek.

3. That the discovery, added to what is stated in p. 42. note 2. places the authenticity of Horapollo beyond dispute; which is of the greater import, as by the learned he has but too frequently been

thought of no authority.

4. That, as Ammianus Marcellinus is right in his account of The Bee as an hieroglyphic, his authority (and not on matters relating to Egypt merely) will for the future be better worth taking.

5. That the interpretation in question is precisely in unison with the interpretation of the Saitic inscription as recorded by Plutarch.

6. That what Warburton took as the first principle on which to rest his theory, viz. that hieroglyphics are but the second stage of writing, is proved to be correct by this very discovery.

7. That from the same source it may be deduced, that Father Kircher's enormous folios are but a tissue of outrageous falsehood from

one end to the other.

8. That Zoega's conjecture that the elliptic devices on the obelisks

are proper names, derives proof from the said discovery.

9. That Warbarton's supposition, that the intent of the obelisks was to record the military praises of the Egyptian kings, is confirmed by the said discovery very nearly without exception; similar elliptic devices occurring in a similar manner in all the obelisks, and all of them therefore denoting the names of kings.

10. That, in order to express the names of different kings, different hieroglyphic marks are observed to be contained within the oval rings on different obelisks.

11. That, from this last consideration, it seems probable, that the Monticælian, the Medicean, and the Mahutwan obelisks, (which have a thore modern appearance, and are the same with respect to the elliptic devices, and in other respects as well, with the Flaminian) are mere transcripts of that obelisk, made in after-times; and that the same is true a fortiori of the Sallustian obelisk, the lithography of

which is known to have been cut at Rome,

12. That from this very observable variation of the marks within the elliptic rings upon the different obelisks, added to the great difficulty of comprehending how proper names could be written after the common fashion of hieroglyphics, and backed by a remarkable passage in Horapollo, which at this present we cannot quote otherwise than from memory,—èν μεσῷ τῷ εἰλίγματι ὅνομα γράφουσι,—from which, not improbably, Zoega's discovery, mentioned in article 8. was drawn out, it seems not unlikely that the clue to the development of these proper names is an hieroglyphic alphabet.

13. That, if this be true, the present discovery paves the way to

such developement.

14. That the method of coming at such development, must be by comparing the component parts of the name Rhamestes and that which stood for The Sun, with the component parts of that of Ptolemy and others upon the Rosetta stone; it being as certain that the radical parts of the names must be the same in the Egyptian and in the Greek, as that the formative should be different. The proper name of The Sun may have been read Osiris. See Macrob. Saturnal. I. 21.

15. Finally, that the proof relating to the identification of the Flaminian obelisk in p. 52. note 1. and the interpretation of a portion of that obelisk in p. 64. note 1. corroborate each other reciprocally.

As the discovery, therefore, is of so much importance, we can hardly do justice to our author without giving it as expressed in his own words; which may serve also, once for all, as a specimen of the style and manner in which the Dissertation is written.

"Quod ad Schemata illa elliptica attinet, quæ in obeliscis fere omnibus interdum simplicia, interdum etiam occurrunt bina, posterioris hujus generis notardum est septendecim in obelisco Flaminio omnino feneriri; in latere scilicet australi quatuer, quod et in boreali contigit, necnou etiam in occidentali; quinqué autem in orientali. Quorum omnium, si unum alterumve errorem excipias ab hicroglyptu profectum, (exemplum sit circuli omissio in meridionali latere obelisci,) eadem omnium ut videtur, ratio est. Pro nominibus propriis, hieroglyphice expressis, sumenda esse hæc schemata mecum putaveram, ante lectam numer Anonymi de tabula Rosettana epistolam. Vide Mus. Crit. Tom. 11. p. 202. Cf. etiam Zoeg. p. 465. Ceterum hanc meam conjecturam duo yel præsertim firmare vidertur. Unum

·quidem, quod nusquam ovatæin obeliscis figuræ conjugatæ reperiuntur, nisi avis cujusdam ope δολιχοδείρου; quem, etiamsi illic loci. nulla de circulo, supra avis caput plerumque suspenso facta sit mentio, Horapolliuis tamen vulpanserem esse quovis pignore contendam, eunde que filium significare. Locum exscribam; Υίψν δε βουλύμενοι γράψαι χηναλώποκα Ζωγραφούσι, τούτο γάρ τλ. Ζώον φιλοτεκνώτατον υπάρχει. και γαρ διωκηταί ποτε είς το συλληφθήναι συν τοις τέκνοις, δ τε πατήρ καλ ή μήτηρ αύτου αύθαιρέτως διδόασιν έαυτούς τοις κυνηγοίς, οπως τα τέκνα διασωθή δι ήνπερ αιτίαν τοις Αλγυπτίοις έδοξε σεβάζειν τὸ ζῶον. I. 53. Alterum est, quod super harum superiore ovatarum figurarum apis fere semper designatur cum palmite, vel flosculó, vel, si malis, sceptro, bisis suffulta hemicyclis. Quam cum Ammiano Marcellino (xvii. 4.) pro Rege accipiendam esse mecum habeo persuasissimum. Verba ejus sunt; "Per speciem apis mella conficientis indicant Regem; moderatori cum jucundidate aculeos quoque innasci debere his stanis ostendentes." Ceterum et hoc vidit auctor Anonymus supradictus; a quo, ut videtur, horum studiorum amantes permulta, nec injuria, sperabunt. Vide Mus. Crit. Tom. 11. p. 203. Nec vero impedimento illud erit, quod de ape aliter constituit Horapoll. 1. 62. Quæ enim pro Populo Regi morem gerente apis interdum ponebatur, eadem alias, vel facilius, de ipso Rege intelligi potuit. Fatendum est hano apis figuram, quam Kircherus papilionem · dracontomorphum cum thyrso papyracco junceove, sive muscam Ægyptiacam, nuncupat (Œd. Ægypt. tom. 111. p. 183. 195. 196. 206.), alii autem formicam alalam, ab apibus nostratibus aliquantum discrepare. Verum, quoniam in obeliscis præter scarabæum unum tantum reperitur animal ex insectorum aligerorum classe, hoc illud putarim esse, cui apis vocabulum interpretes indidere. Ceterum rem extra dubium ponit obeliscus Sallustianus; in quo apes, quæ occurrunt, formam inducre usitatiorem curavit Romanus lapicida. De apibus consulas Aristot. Hist. An. V. 22. ix. 40. Ælian. de An. 1. 50. 60. V. 10. 11. Plin. Nat. Hist. xi. 5. 17. &c. Senec. de Clement. 1.-19. Virg. Georg. iv.

"Quibus quidem positis, cumque Hermapionis interpretatione collatis, geninas illas sic constitutas jugatasquo figuras, in hoc obelisco, regis Rhamestis laudes concinente, sic fere Græce expouendas judico; ΒΑΣΙΛΕΥΣ ΡΑΜΕΣΤΗΣ, ΗΛΙΟΥ ΠΑΙΣ. Eadem quoque schemata invenies inter notas minusculas circa stylobatam capitellumque exaratas. Iu cujusque lateris capitello ad finem orationis prostant ab ore dei (Apollinis videficet, quod supra observatum est, sive Ori, teste. Herod. II. 144.) prodeuntis. Ultima oranium nota globus ille est fluobus basiliscis, sive ureis, ornatus, additis interdum binis alis vulturinis. Quam, dum Horapollinem intueor (I. 1.), idem valere puto ac Græcum alacyóβιος. Exinde uniuscujusque prationist sic dictæ, crediderim has voces finem constituere; ΒΑΣΙΛΕΥΣ ΡΑΜΕΣΤΗΣ, ΗΛΙΟΥ ΠΑΙΣ ΑΙΩΝΟΒΙΟΣ."

We had almost omitted to observe that to the Dissertation is sub-

translations of hieroglyphic monuments that are known to exist.

These are, the Greek epitome of the Flaminian obelisk by Henmapion, and the Greek inscription on the Rosetta stone. Notes and Latin versions are added; and we have reason to believe that these two monuments of antiquity are no where to be found in so correct a state as in the present volume. In the first paragraph of Hermapion, Zoega, i his improved edition, had omitted the words HAIOT $\Pi AI\Sigma$; which are found in every other copy. If this omission had been overlooked, and Zoega's text been taken as a standard, the discovery we have stated might never have been made. The use of the supplemental parts of the Greek inscription, by Porson, together with Heyne's Latin translation, was: afforded to Mr. Bailey by the Society of Antiquaries of London; whose liberality on this occasion he thus acknowledges: "Huiusce inscriptionis, sic expletæ, usum mihi humanissime concessit Soc. Antiquar. Londinensis. Idem dictum puta de Latina, que adjecta est, interpretatione a Chr. G. Heyne, Profess. Sodul. Honor. Sotting expressa."

SOME OBSERVATIONS_

On the Worship of Vesta, and the Holy Fire, in Ancient Rome: with an account of the Vestal Virgins.

BY G. H. NOEHDEN, LL. D.

PART II. [Continued from No. XXIX. p. 130.]

It does not appear that there was any difference of degree, or preeminence, among the Vestals, except that which might arise from seniority. One of them, indeed, is termed Virgo Maxima; (see Sueton. Jul. 83. Domit. 8. Valer. Max. 1.1. 7. Plin. Ep. iv., note of Gronovius ad Tacit. Ann. 111. 69., and other passages); but Maxima means no more than the eldest, or senior. Ovid calls her natu maxima. Fast. 1v. 639.

Igne cremat vitulos, quæ natu maxima Virgo;
And Tacitus uses the expression, Vetustissima, which merely relates to age, organiority. Annal. A. 33 Notificiam Virginum Vestalium vetustissimam vravit Pontificis Maximi aures adire, elementiam expetere. It seems, however, that upon the Maxima, or senior, certain functions were imposed which, in some manner, distinguished her above the others. Dio Cassius designates her station by the term πρεσβεύειν, that is, to be in the situation of semor, and to discharge the duties belonging to it. The passage to which I allude, is lib. Liv. p. 754. lin. 90. ec. Reimar. He is speaking of three that broke out at Rome, (in the time of NO. XXXII.

Augustus, a. U. C. 740.), and reached the temple of Vesta: καὶ τὸ πῦρ —πρὸς τὸ Ἐστιαῖον ἀφίκετο, ὅστε καὶ τὰ ἐκρὰ ἔς τε τὸ Παλάτιον ὑπὸ τῶν ἄλλῶν ἀειπαρθένων (ἡ γὰρ πρεσβεύουσα αὐτῶν ἐτετύφλωτο) ἀνακομισθήναι, καὶ ἐς τὴν τοῦ ἰερέως τοῦ Διὸς οἰκίαν τεθήναι,—the fire reached the temple of Vesta, so that the sacred relies were carried to the Palatium by the other hely virgins (their senior being blind), and deposited in the house of the friest of Jupiter. We are to infer that, if the senior wirght had not been disabled by bliodness, it would have been exclusively her business to carry those sacred articles. In this view, she may be said to have been at the head of the establishment: but we do not read that she had any control or authority over the others. In another passage (hb. LXXIX. p. 1358. lin. 91. ed. Reimar.) Dio speaks of one of the Vestals under the denomination of ἀρχιερεία, which undoubtedly was the Maxima, thus distinguished from the rest of them.

From the inviolability and sanctity which were attributed to the Vestals, they were frequently made the depositaries of valuable objects, such as important records, last wills, and the like. Then abode was regarded as a place of sanctity and perfect security's and every thing, in the hands of such keepers, must not only be safe, but also exempt from the emissity and inquisitiveness of the world. The testament of Julius Caesar had been committed by him to the care of the first Vestat, Virgo Vestalis Maxima; ' see Sacton, Jul. 83. The will of Mark Anton. Awas entrusted to the Vestals; and when Octavius Casar required them to deliver it up, they refused to do so. This is related by Plutarch (Anton. 58.): Τίτιος δε και Πλάγιος, 'Αντωνίου φίλοι, των υπατικών, υπό Κλεοπατραι προπηλακιζόμενοι (πλείστα γαρ ήναντιώθησαν αθτή περί του συστρατεύειν) άποδράντες ώχουτο προς Καίσαρα, καὶ περί τῶν 'Αντωι ίου διαθηκῶν ἐγίνοντο μηνυται, τα γεγραμμένα συνειδότες άπέκειντο δ' αθται παρά ταῖς Εστιάσι παρθένοις, καὶ Καισαρος αίτουντον, οὐκ ἔδωκαν τι δε βούλοιτο λαμβάνειν, έλθειν αυτύν έκέλτυοι. Eλaßer over chθώr. -Titin and Plancus, friends of Anteny, and men of consular rank, finding themselves ill treated by ('leopatra, because they had opposed her scheme of accompanying Antony in his campaign, deserted to Casar, and informed him of the testament of Antony, as they knew its contents. The will was deposited with the Vestal Virgines; and when Casar demanded it from them, they would not give it up, saying, if he wanted it, he must come and take it. He, therefore, did go, and took it. The will of Augustus was likewise deposited in that sauctuary; see Facit. Ann. r. 8 Sueton. Aug. 101. Other records were occasionally kept there. Dio Cassiur, for example, mentions, that the treaty concluded between the Triumvirs (Octavius, Antony, and Lepidus), and Sextus Pompeius (the son of Cut Pompeius), in the year of Rome 715, was lodged with the Vestals; lib. xLv111. p. 554. ed. Reimar.: Tubra per obv συνθέμενοι και συγγραψάμενοι, τα γραμματεία ταις ιεριίαις ταις . herraptivous mapificaretterro, - having come to this conclusion, and Areson up a compact, they laid up the record of it with the Virgin Priestesses. This treaty is again spoken of p. 562. lin. 32., were Sextus Pompeius lad violated it: Octavius then took it away from the Vestals, and destroyed it. Ο οῦν Καῖσαρ μαθών τοῦτο, τά τε γράμματα τὰ τῆς συμβάσεως ανείλετο παρὰ τῶν ἀειπαρθένων. Appian mentions the same treaty, and its being kept by the Vestals. Bell. Civ. v. 73. (ed. Schweighauser.): Ἐς ταῦτα συνέβησαν, καὶ ταῦτα συνεγράψαντο, καὶ ἐσημήναντο, καὶ ταῖς ἱεραῖς παρθένοις ψυλάσσειν ἔπεμψαν, μροπ these articles they came to an agreement, reduced them to writing, and signed and sealed them, and sent them to Rome to the holy Virgins to take care of. In another place, Dio notices an arrangement made between Octavius and Mark Antony, which was also consigned to the Vestals. Lib. ΧΕν111. p. 534. lin. 26. ed. Reinar.: Καὶ ταῦτα ἐς δέλτους γράψαντες, καὶ κατασημηνάμενοι ταῖς ἀειπαρθένοις

φυλάττειν έδοσαν.

What has thus far been observed, marks the respect and veneration with which the Vestals were regarded, and the authority and influence which they had with the people. The honours and privileges which they enjoyed, raised their station to a high degree of dignity; and it could not have failed to be an object of ambition and rivery among those who were qualified to attain it, if those advanriges had not been thought to be equalled or surpassed by the severity and rigour with which the violation or neglect of their duty was punished. This is another view of the picture to which we now must turn out eyes. Their life was by no means a life of disterity and privation; but it required the scrupulous ob prance of some leading points which were enjoy of. Else they seem to have lived in ease and splendour; and they were not excluded from the intercourse of their friends, and the amusements of society. Every one had access to their man-ion; it was only forbidden that, at night, any male should remain there. Dionys. Halic. 11. 67. ed. Reiske.: ειθα εξ' ήμέραν μέν ούδεις απείργεται των βουλομένων είσιεναι νύλτωρ δε ούδεν των αρρίνων έναυλίσασθαι θέμις, - no one is in the day-time prevented from entering their abode; but in the night no male is allowed to remain there. They were themselves not restrained in their going out and coming in, only that in their whole demeanour strict propriety and decorum were to be observed. In a passage, quoted before from Dio Cassius (lib. xLV11, p. 504, bn. 54, cd. Reimar.), allusion is made to a Vestal, coming home from a banquet or dinner (άπὸ δείπτον); and Macrobius (Saturn, 11, 9, p. 392, ed. Zeune) gives an account of an entertainment, at which four Vestals, who are mentioned by name, were present. This was, indeed, a sort of sacerdotal banquet, given by a priest of Mars (flamen Martis); but we have no reason to suppose, that they would have been restricted from attending it, if it had been the entertainment of any other individual, provided nothing occurred illoursistent with their holy character. Decency and propriety were required in their dress and outward appearance. Of the manner in which they were usually affired, some idea may be formed from the representations that are formed on coins and medals, and afforded by some status. See, for instance, Monthacon's Antiquité Expliquée, vol. 1. part 1. book 11. chap. 6. p. 60. and vol. 11. p. 1. b.1. ch.

8. p. 30. also Supplement, vol. 1. p. 66. Their dress was matron-like, and consisted of a long robe (stola, Plin. Ept 1v. 11.), and a veil covering the head, together with the infula, or bandeau or fillet, the witte, or bandelets (which seem to have been a sort of appendage to the infula), and other emblems of priesthood, (στέμματα καὶ τὰ λοιπὰ παράσημα της ιερωσύνης. Dionys. Hal. 11. 67. ed. Reiske). One of their garments is particularised by the name of carbasus (Valer. Max. 1. 1. 7.), in Greek, ἐσθὴς καρπασίνη (Dionys. Hal. 11. 68. ed. Reiske), and seems to have been a sort of fine vest, thrown over the other dress. Pighius, in a note to Valerius Maximus, (r. 1. 7. Tom. 1. p. 16. ed. Torrent. Leid. 1726.) observes: Nonius docet carbasum esse pallium é serico vel tenui lino, quo fæminæ divites amiciantur. It is, of course, to be presumed, that they were arrayed somewhat differently, when they were actually discharging some of their sacred functions, from the manner in which they were commonly habited. For example, when they were sacrificing, they wore a sort of square cloth, which covered the head from behind, and hung down the back. It was white, with a purple edge; and fastened by means of a clasp or . buckle, whence it was denominated suffibulum. Festus, under this word, (lib. x v11. p. 543. ed. Delphin. 1700.), describes it in this mail ner: Suffibulum est vestimentum album, prætextum, quadrangulum, oblongum, quad in capite Virgines Vestales, cum sacrificant, habere solent: idque fibela comprehenditur. The figures of Vestals, which are seen upon coins admedals, and the statues which exist represent them, almost with ut any exception, with short hair. It seems, therefore, as if it had been required of them to cut their hair, and wear it in a simple and unadorned manner. The cutting of the hair is established by a passage in Pliny (N. H. XVI. 85. Tom. III. p. 142. ed. Bip.), where a certain ancient tree, at Rome, is spoken of, on which the Vestals were in the habit of suspending their hair. The tree, which was a lotos, was thence called capillata. words are these: Antiquior illa (lotos) est, sed incerta ejus ætas, quæ capillata dicitur, quoniam Vestalium Virginum capillus ad eam defertur. The devoting or offering up of the hair was, in some instances, regarded as a religious act; and probably the hanging it up on that tree, in the case of the Vestals, had a similar meaning, by which they might figuratively signify, that they had devoted themselves to the service of the goddess. We are not informed by any other passage in the ancient writers, as far as I know, whether this rite of carrying the hair to the ancient lotos tree was, at different times, or frequently, repeated by the Vertals, or whether it was only once performed. immediately after their reception and consecration. The people appear to have beheld with jealousy and disapprobation any departure from the yenerable costume. Seneca (Excerpt. Controv. vf. 8.), speaking in defence of a certain Vestal, alleges as an argument in her favour, Non illi cultus luxuriosior; and Livy, on the other hand, (IV. 44.), mentions one, by the name of Postmuia, who, by a disregard of that decorum, was not only consured for levity in her demeanour, but incurred the suspicion of unchastity, and was tried for her life: Eoden

onno Postumia, l'irgo Vestalis, de incestu causam dixit, crimine innoxia; ob suspicionem propter cultum amæniorem ingenjumque liberius, quàm Virginem decet, parum abhorrens famam. Ampliatam, deinde absolutam, pro collegii sententia, Pontifex Maximus abstinere jocis, colique sancte potius, quam scite, jussit. "In the same year" (it was the year 336 of Rome, or 417 before Christ)," Postumia, a Vestal Virgin, was tried for incontinence, though innocent of the crime; she had given a handle for that imputation by her mode of dress, which was more gay, and her manners, which were less reserved, than became, a Vestal. Seutence was stayed, and she was subsequently acquitted; but the Pontifex Maximus, in conformity with the resolution of the collegium of pontiffs, admonished her to abstain from levity of conduct, and in her attire more to attend to gravity and propriety than to elegance." Another instance of the same kind occurs Liv. vIII. 15.: C. Sulpicio Longo, P. Ælio Pæto, consulibus -Eo anno Minucia Vestalis, suspecta primò propter mundiorem justo cultum, insimulata deinde apud pontifices ab indice servo; cum decreto corum jussa esset sacris abstinere, - "in that year" (417 of Rome, 336 Lefore Christ,) "the Vestal Minucia, having incurred suspicion on account of her dress, which was too fine and gay, and being subsequently informed against, before the pontiffs, by a slave who betrayed her, she was first of all by a pontifical decree suspended from her sacred functions,"-and she afterwards paid the sorteit of her indiscretion with her life. The realousy which was itertained of the virtue of the Vestals, may sometimes have proved fatal to an individual that was really innocent. This was thought to be the case with our, called Cornelia, whom the Emperor Domitian ordered to be buried alive: of which further mention will be made hereafter.

From the two passages of Livy last quoted, viz. IV. 44., and VIII. 15., it is seen, that the Vestals were placed under the authority and jurisdiction of the Pontifex Maximus, and the Collegium Pontificum, collectively. And it is expressly said by Dionys. Halic. (II. 67. ed. Reiske), Exeragrai te kal kolastai katà vomo eisiv oi iepopávrai,—they are under the jurisdiction of the pontiffs. Even when the power and dignity of the Pontifex Maximus were vested in the Emperors, as it was since the time of Augustus (Sucton. Aug. 31.), the other pontiffs sat with them in council and judgment. Thus Pliny (Ep. IV. 11.) says of the tyrant Domitian when he was going to condemn Cornelia, reliquos pontifices convocapit. The authority of the pontiffs over the Vestals generally, is intimated by Gellins (1. 12,) in this passage: Virgo autem Vestalis simul est capta, atque in atrium Vestæ deducta, et pontificibus tradita.

The two great delinquencies, for which the Vestals underwent severe punishment, were the neglect and extinction of the holy fire, and the violation of their chastity. The first was, comparatively, a ininor offence when measured with the latter, at least as far as the consequences to the indicated are considered; though it sometimes implicated her in the second, or heavier charge, because it was inferred, that the fire had gone out, on account of the impurity of the

priestess, who had to watch it. This we learn from Dionys. Hal. in two passages, viz. 11. 67. ed. Reiske: πολλά μέν ουν και άλλα δοκεί μηνύματα της ούχ όσίως ύπηρετούσης τοις ίεροις, μάλιστα δέ ή σβέσις του nuple, - there seem to be several different proofs that the Vestal did not discharge her functions in purity, but the chief one is the extinction of the fire. And 11.68., he relates that the Vestal Emilia was in danger of perishing, under the presumed charge of unchastity, because the holy fire was gone out, through the neglect of a young Vestal to whom Æmilia had delegated the care of watching over it. She was preserved from the fatal consequences with which she was threatened, by a sort of miracle. Compare Valer. Max. 1. 1, 7. It was, however, not always, that so alarming an inference was drawn from the extinction of the holy fire; much probably depended upon the state of the times, when such an accident happened. If it was a period of national misfortune and calamity, then woe to the unhappy Vestal, whom that mischance of having suffered the fire to be extinguished befel. She was certain to become the atoning victim for the affliction of the people, and by her death to satiste the irrifated prejudices. In ordinary times the natural and obvious cause of ... similar accident seems to have been more readily admitted. usually happened in the night, when the guardian who was to watch was overcome with sleep: it was neglect and inattention which naturally caused such an accident, and no miraculous influence, whatever superstition might make of it. This is very sensibly remarked by Livy (XXVIII. 11.): Terruit animos hominum ignis in æde Vestæ extinctus .- Id quanquam, nihil portendentibus Deis, ceterum negligentia humana acciderat, tamen &c. But if the Vestal, for this fault, was not brought into danger of her life, by means of the supposed crime of unchastity, she did not escape a severe punishment. This consisted in bodily custigation: she was scourged, or beaten with rods. Liv. xxv111. 11.—Ignis in æde Vestæ exstinctus; cæsaque flagro est Vestalis cujus custodia noctis ejus fuerat. Festus under the word Ignis (Lib. x. p. 178. ed. Delphin. 1700.): Ignis Vestæ siquando interstinctus esset, Virgines verberibus afficiebantur a Pontifice. Valer. Max. 1. 1. 6.: P. Licinio pontifici maximo Virgo Vestales, quia quadam nocte param diligens ceterni ignis custos fuisset; digna risa est, quæ flagro admoneretur. The expression of Valerius Max., flagro admonere, for flagro cadere, or verberibus afficere, has an affected appearance, and I am inclined to prefer the emendation which is suggested by some commentators (see theredition of Torrentius), viz. flagro admoneretur. Flagro admonere, for to chastise, to scourge, would not be an unusual phrase. This mode of punishment, to which the Vastals were subject, is mentioned by Dionys, Hal. (11. 67. ed: Reiske), τὰς μεν άλλο τι των έλαττόνων άμαρτανούσας ράβδοις μαστηyouvres,—those who commit any of the minor offences they acourge I with rods. And by Platarch (Num. 10.): Kódaois de two mer adder αμαρτημάτων πληγαλταίς παρθένοις, -the pulkinhment of the Vestale for any other transgression but the violation of their chastity, consists

in stripes or laskes? which it seems, the supreme Pontiff inflicted with his own hand; for Plutarch adds, row perioren Horriders rolas Corros,—the Pontifex Maximus administering the discipline. That the task might be transferred by him to some other pontiff is obvious, and borne out by the passage in Dionysius just quoted, where the word μαστιγούντες, in the plural number, assigns that duty to the poutiffs collectively; and by Livy (xxvIII. 11.), who says, "Casaqueflagro est Vestalis-jussu P. Licinii Pontificis,"-she was scourged by "order of the Pontifex Maximus," therefore, not by his own hand. That P. Licinius, though here simply denominated pontifex, was Pontifex Maximus, we know from Valer. Max. (1. 1. 12) That chastisement was severe: for it was sometimes applied to the naked body - έστιν ΰτε καὶ γυμγήν, (Plut. Num. 10.), in which case care was taken that no offence was given to decency. For the execution took place in a dark corner, and behind a curtain: so at least I believe the words of Plutarch are to be interpreted, δθόνης έν παλινσείφ παρατεινομένης. Dionysius Halic, and Valerius Maximus have a legend of a poor Vestal, who had suffered the holy fire to go out, but wasswaved from the fearful consequences of her neglect, by the minediate interposition of the goddess. See Dionys. Hal. 11. 68, Reiske, Valer, Max. 1, 1, 7.

But dreadful was the punishment of her who was convicted of having violated her chastity. It was death, and the most horrid death that can be conceived (οίκτιστος μόρος, Debnys. Hal. 11. 68.): the unhappy offender was buried alive. The came was called incestur, crimen incestus, incestum, scelus incesti, brimen incesti, stuprum, crimen stupri, probrum. See Liv. 1v. 44. v111. 15. XXII. 57. Plin. Ep. IV. 11. Festus v. Probrum. The criminal was denominated incesta (Plin. Ep. 1v. 11.) The Pontifex Maximus, together with the other pontiffs, were the judges (see above). The sentence, if she was found guilty, was, to be buried alive, viva defodi (Liv. Sueton. Plin.); Zwoa karopirreobai (Dionys. Hal. Plutarch.) The spot, where this dreadful judgment was executed, was near the Porta Collina of Rome, within the walls of the city. That gate was on the northeast side, and led up to the Collis Quirinalis and Viminalis, whence it seems to have derived the name of Collina. It was also collect Porta Quirinalis and Agonensis, and subsequently likewise Porta. Salaria, from its being upon one of the great public roads, the Via Salaria. (See the writers on ancient Rome; for example, Marlianus, Fabricius, Donatus, in Guevii Thesaur. Antiqg. Rom. Tom. 111.). It is to be noticed, that the spot alluded to was within the town, as is particularly remarked by the aucient writers—foros rou reixous, Dionys. Hal. (11. 67. v111. 89. ed. Reiske); ἐντὸς τῆς πόλεως, Plutaich. (Num. 10.) It seems that the Vestals, as holy :persons, were generally buried within the town, not, as others, without the walls: and this distinction was even maintained with such of them as were buried alive, for the most heinous offence. There is a passage from a speech of M. Cato de Auguri, preserved in Festus, under the word Pre-brum (Lib. x1v. p. 375. ed. Delphin.), which confirms this: Adjicit

quoque (M. Cato): Virgines Vestales, sicerdolio exauctoratæ, quæ incesti damnatæ, vivæ deforsæ sunt, quò sacra Vestæ matris polluissent, nec tamen, licet nocentes, extrà urbem obruebantur, sed in Campo proximè Portam Collinam, qui sceleratus vocatur. That the place was called Campus Sceleratus, as is here said by Cato, is also mentioned by Livy (VIII. 15.), and this author appears justly to suppose, that it had that appellation from the very circumstance of its serving as the ground, where the polluted Vestals were interred—Scelerato Campo, credo, ab incesto id ei loco nomen factum. He farther says, that it was, ad portam Collinam dextrá viá stratá, "near the porta Collina, on the right hand of the road," which right hand, I presume, is to be understood, as you want out of the gate. And Plutarch describes it as ground somewhat rising, (Num. 10.), δφρὸς γεώδης, παρατείνουσα

πόρρω.

It is impossible to read the details of such an execution, as they are given by Plutarch (Num. 10), without shuddering. In the ground that has been described, a subterraneous chamber or cell of small dimension (κατάγειος οίκος οὐ μέγας, Plut. Num. 10.; also called . οίκημα, ibid. σηκώς, Dionys. Hal. 11. 67. Reiske. Cubiculum subitirraneum. Plin. Ep. IV. 11.)—was formed (κατασκευάζεται), into which you descended from above (έχων άνωθεν, κατάβασιν). There were placed in it a couch or bed (κλίνη ὑπεστρωμένη), a burning lamp, and a few necessaries of life (ἀπαρχαὶ τῶν πρὸς τὸ ἔμν ἀναγκαίων βραχεῖαί rives), such as bread, water, milk, and oil. It would have been impious, according to Patarch, to destroy by hunger, a life that had been consecrated by the most holy rites (ωσπερ άψοσιουμένων τὸ μὴ λιμώ διαφθείρειν σώμα ταις μεγίσταις καθιερωμένον άγιστιίαις). The wretched victim, it is to be imagined, chiefly perished by suffocation. For the cell was closely shut, and overlaid with earth, as soon as she was descended (τῆς δὲ καταβάσης, κατακρύπτεται τὸ οἴκημα γῆς πολλῆς ανωθεν έπιφορουμένης). The whole proceedings were terrific. The delinquent was conveyed to that place of horror in a litter, so fastened up. and covered from without, that not even a sound or groun could escape from it. She was thus carried through the market-place (be ayopas; compare Dionys. Hal. VIII. 89. Reiske), while the people. in fearful silence, made way, and followed speechless, impressed with the awe of this frightful ceremony. No sight, says Plutarch, could be more shocking, nor was there ever a day at Rome more gloomy, and sorrowful. When the litter had arrived at its destination, the attending officers (οἱ ὑπηρέται) unloosened, the covering. . The chief, or leader, of the priests (& rww ispews & Eapy of, that is, of the pontiffs: see Plim Ep. IV. 11.), having made a sileut or secret prayer (evyás rivas ἀπορρήτας ποιησάμενος), spreading out his hands towards heaven, as if to call the gods to witness, how dire a necessity required this act (και χεϊρας άματ**τ**ίνας Θεοῖς πρὸ τῆς ἀνάγκης), led her forth from the litter, with her face veiled and covered (¿ξάγει συγκεκαλυμμένην), and blaced her upon the ladder which led down to the chamber. He then turned away with the other priests, and when she had descended, the ladder was taken up, the opening covered over with earth, and

of Vesta.

levelled with the other grand (ωστ' ισόπεδον τῷ λοιπῷ χώματι γενέσθαι τον τύπον). When the priest had quitted the delinquent, the common executioner (carnifex, see Plin. Ep. 1v. 11.) performed all the remainder of the office, that is to say, removed the ladder, closed the aperture, and threw on the earth. Such was this tremendous punishment, according to Plutarch's description. That which is given of it by Dionysius Hal. (11.67. Reiske) is less complete, and probably less accurate. He says, among other things, that the litter was attended by the friends and relations of the Vestal, who were weeping and lamenting (ἀνακλαιομένων αὐτὰς καὶ προπεμπόντων φίλων τε καὶ συγγενών); whereas Plutarch states, that a mouniful silence was observed (Elorarrai δε πάντες σιωπή, και παραπέμπουσιν άφθογγοι μετά τινος δείνής κατηpelas). In another passage (IX. 40. Reiske), Dionysius relates, in one instance, that the Vestal, before she was led to death, underwent a flogging or scourging: ράβδοις δε έμαστίγωσαν, και πομπεύσαντες δια της πόλεως, εωσαν κατώρυξαν,—they beat her with rode, and having conducted her through the town, buried her alive. This additional severity I have no hesitation in discrediting, as it is not supported by ary other testimony, upon any one occasion. I apprehend, as I have "before intimated, that Dionysius is not to be depended upon for accuracy in particulars. Here he has evidently confounded the flogging, used under other circumstances, with the last, punishment that the Vestals suffered. According to this author, Tas Juinius Priscus was the inventor of the dreadful interment. See 142-07. ed. Reiske.: δολεί δὲ καὶ τὰς τιμωρίας, αἶς κολάζονται πρὸς τῶν ἱεροφαντῶν αὶ μὴ φυλάττουσαι τήν παρθενίαν έκείνος (ὁ Ταρκύνιος) έξευρείν πρώτος,—that king (Tarquin the elder) seems also to have invented the punishment which is inflicted by the pontiffs, upon such of the Vestals as do not keep their virginity. In the case of Ilia, or Rhea Sylvia, the mother of Romulus, the punishment that she was threatened with, for the transgression of which, as a Vestal, she had been guilty, was, as the same writer mentions, that of being beaten to death with rods, 1.78. Reiske.: ράβδοις αἰκισθεῖσαν ἀποθανεῖν. Cedrenus, oue of the Byzantine historians, a late writer (of the 11th century), and consequently of no weight in a matter of antiquity, says, that the polluted Vestals were, in early times, stoned to death, lapidibus obruebantur. But his own words (p. 118. D. Tom. v111. Corp. Histor. Byzant. ed. Van. 1729.) are: τὰs Εστιάδαs παρθένους—αὶ διὰ τοῦ βίου την παρθενίαν έφύλαττον εἰ δὲ μή, λίθοις катехычичто. Plutarch, in Quæstiones Romanæ (Op. Tom. VII. p. 154. cd. Reisker) attempts to explain the reuson, why that particular punishment, of burying alive, was chosen for the Vestals. Among his conjectures, the most plausible seems to be, that a person so holy should not suffer the death of a common criminal, or be touched by the hands of the executioner: to avoid which, no mode could have been better contrived. She descended herself into the subterraneous cell, and thus was separated from the world and from life, without any act of violence.

This terrible mode of avenging the crime in question, one would

suppose, would have rendered the commission of it extremely rare. Nor are the examples which occur in Roman history perhaps to be considered as numerous, when the length of time, during which that establishment existed, at least a thousand years, is taken into account. I will in conclusion of this disquisition mention the most remarkable instances, which we meet with in the ancient writers. The first criminal of this kind that was condemned, we read of in Dronysius Hal. Her name was Pinaria, and the event happened under the elder Tarquin. Sec 111. 67. cd. Reiske.: έφάνθη γάρ τις έπι της έκείνου (Ταρκύνιου) βασιλειπε ίερεία Πιναρία, Ποπλιου θυγάτηρ, ούχ άγνη prootenatis ispois, -in his reign the priestess Pinaria, the daughter of Publics, was discovered to discharge the sacred functions, when she was involved in the guilt of impurity. The punishment, which was inflicted in such a case, is then alluded to. In Livy (VIII. 15.), the fate of Minucia, who was convicted and buried alive (in the year of Rome 417, before Christ, 3 17.) is recorded. In the year of Rome 538 (before Christ, 216.) two were condemned (stupri compertæ), Opimia and Floronia. Liv. xx11. 57.: Dua Vestales eo anno, Opimia atque Floronia, stupri compertæ; et altera sub terram, ut mos est, ad poktam Collinam necata fuciat; altera sibimet ipsi mortem consciveraci There are the two Vertals of whom Plutarch speaks in Fab. Max. 18.-- των Τοτιαδών παρθένων δύο διεφθαρμένας ευρώντες, την μέν, ώσπερ έστιν έθος, Ζωσαντιχτώρυξαι, ή δε ύφ' έαυτης απέθαιε, - having detected two of the Vectal Virgina to be guilty of incontinence, they buried one of them alive, as is the established usage in such circumstances: the other put an end to herself by her own hands. Dionysins Hal. (VIII, 89. Reiske) places the condemnation of Opinia in the consulate of M. Fabius (the son of Caso), and L. Valerius (the son of Marcus). which is, in the year of Rome 271, before Christ 482. Here is a sad deviation from chronology, either on the part of Dionysins or of Livy. I am inclined rather to confide in the latter. The Vestal Urbenia was. according to Dionys. Hal. (1x. 40. ed. Reiske) condemned in the consulate of L. Pinarius and P. Furius, which falls in the year of Rome 282, before Christ 472. (see Almeloveen, Fasti Consulares). To her pollution a plague, that raged at Rome, was imputed, and stopt by her punishment. In Dio Cassius, and the Epitome of the 63d book of Livy, three cases are recorded, which bappened about the year of Rome 640, before Christ 114. The culprits, whose names were Emilia, Licinia, and Murcia, all perished. See Dio Cass. fragm. Lib. xxxIV. p. 89. lin. 62. Freinshem. Supplem. ad Liv. lib. LXIII. 5-8. Domitian condemned four, viz. Varonillo, two sisters Ocelluta. and Cornelia, who was Virgo Marina. The latter was buried above : to the three others he left the choice of their deaths. See Sucton. Domit. 8. Die Cass. lib. LxvII. p. 1103. ed. Reimar. Philostrat. Vit. Apollon. Tran. VII. 6. Suctonius represents this act of severity as a salutary correction of that dissoluteness, which, by the connivance of the preceding Emperors, had gained ground. Intesta Vestalium Virgi-

Philostratus also seems to speak of it with commendation: Dio Cassius merely touches upon it. But the younger Pliny, in detailing the fate of Cornelia (Epist. IV. 11.) gives the impression that her condemnation was a deed of the most wicked tyramy. He describes the anguish of the unhappy woman when her doom was announced to her. Missi statim pontifices, qui defodiendam necandamque curarent. Illa nune ad Vestam, nune ad ceteros deos manus tendens, multa, sed hoc frequentissime clamituhat, "Me Cæsar incestam putat, qua sacra faciente, vicit, triumphavit!" And he commemorates her last moments thus: Quin etiam cum in illud subterraneum cubiculum demitteretur hæsissetque descendenti stola, vertit se et recollegit. Cumque ei carnifex manum daret, aversata est, et resiluit, seedunique contoclum, quasi plane a casto puroque corpore, rejecit : omnibusque numeris pudoris πολλήν πρόνοιαν είχεν εὐσχήμως πεσείν,--" when she was let down into the subterraneous chamber, and her robe had caught in descending, she turned round and gathered it up. And when the executioner offered her his hand, she shrunk from it, and turned away with disgral; spurning the foul contact from her person, chaste, pure, and he is and with all the deportment of modest grace, she scrupulously endeavoured to perish with propriety and decorum." That Pliny thought her innocent, and considered her death as a wanton piece of cruelty in that detested tyrant, appears from these words: immanitate tyranni, qui illustrari sæculum suum cjusme. L'exemplo arbitraretur. The monster Caracalla (in the year of come 968) condemned five at once, of whom four, viz. Clodia Læta, Aurelia Serera, Pomponia, Rufina, were buried alive; the fifth, Canutia, to escape this horrid sentence, anticipated death, by throwing herself from the top of a house. This is related by Dio Cass. lib. LXXVII. p. 1302. ed, Reimar.

If it is to be wondered at, that notwithstanding so terrifying a preventive before the eyes of the Vestals, the crime should have been committed, it is certainly not less surprising, that there should have been men, so corrupt and desperate, as to rush into guilt, which not only brought, destruction upon the unhappy females, but upon their own heads. For it will presently be seen, that the fate of the seducer was not much more enviable, than that of the seduced. It is very justly observed by Freinshemius (Supplem. in Liv. lib. LXIII. 7.): perditis ingeniis severissime vetita maxime expetuntur; and several of those wretches, who are most distinguished in history for their wickedness, after having, as it were, glutted themselves with vice, are said to have found, in the perpetration of this crime, a means of gratification. Thus Catiline (see Sallust 15.), Nero (Sueton. 28.), Caracalla and Elagabalus (see Dio Cassius), are charged with its commission. Under circumstances where suspicion was so, much upon the alert, and where the popular opinions and prejudices were so much interested, it cannot but sometimes have happened, that the innocent. were accused. Dio Cavitàs (Fragm. lib. XXXIV. p. 39. lin. 46. ed. Reimar,) has a passage that bears upon this point; obder ore obx incτόπουν των αλοχίστων και άνοσιωτάτων δύναδθαι γενέσθαι καλ διά τουτο τας κολάσεις ου μόνον των έλεγχθέντων, αλλά και των άλλων πάντων των αίτια σθέντων, μίσει του συμβεβηκότοι ἐποιήσαντο, —there was nothing so criminal and wicked, which they did not presume might have taken place: and, for this reason, they inflicted the punishment, not only for what was proved, but also for every thing that was alleged, from irritation at the reverse that had occurred. Plutarch (in M. Crassus c. 1.) relates, that a Vestal, by name Licinia, was suspected of an improper intercourse with Crassus, for which charge there was probably no foundation. And the younger Cato vindicated another from suspicion, attempted to be thrown upon her, by that turbulent demagogue, Clodius. See Plutarch, Cato Minor. 19. By what means the Vestal Æmilia established her innocence, when she stood upon the precipice of that fatal suspicion, is told at large by Dionysius in a passage before adduced (II. 68. ed. Reiske). And the miraculous escape of Tuccia from ruin, is well known. It is she who proved her chastity by carrying water in a sieve, from the Tiber to the marketplace, or the temple of Vesta. This fable, which is referred to the year of Rome 609, is gravely commemorated by Dionysius Halk-(11. 09. ed. Reiske), and Valerius Max. (VIII. 1. 5.); and seems to have been generally credited by the Roman people. Pliny (Nat. Hist. XXVIII. ed. Bip.) mentions, that the prayer, or address to the gods, which she used up in that occasion, existed to his day. Extat Tucciæ, Vestalis investæ (i. e. a Vestal accused of unchastity) precatio, qua usa aquam in cribro twit. And representations of the Vestal with the sieve are not uncommon. See Montfaucon's Antiquities.

The men who were the seducers (stupratores, or corruptores, as they were denominated,) were treated with corresponding severity. Their punishment was, to be beaten with rods, or flogged, in the assembly of the people, till they expired under the strokes. This was enacted by law, as Festus records, under the word Probrum, lib. xIV. p. 375. ed. Delphin. 1700.) Probrum Virginis Vestalis ut capite puniretur, vir, qui eam incestavisset, verberibus necaretur: lex fixa in atrio Libertatis cum multis aliis legibus. Examples of this punishment occur in the following passages, Liv. xx11. 57.: L. Cantilius, scriba Pontificis, quos nunc minores pontifices appellant, qui cum Floronic' stuprum fecerat, a Pontifice Maximo eò usque virgis in comitio cæsus erat, ut inter verbera expirarct. Sueton. Domit. 8.: stupratoresque virgis in comitio ad necem cædi. Dionys. Hal. VIII. 89. ed. Reiske : δύο δε τους εξελεγχθέντας διαπράξασθαι την φθηράν, μαστιγώσαντες εν φανερφ, απέκτειναν,—the two men who were convicted as the seducers, they flogged to death in public. And IX. 40. : των ξέ διαπραξαμένων πην άνοσίαν φθοράν ο μεν έτερος εαυτον διεχρήπατο, των δε ετερον οι τως λερων επίσκοποι συλλαβύντες, εν άγορα μάστιζιν αικισάμενοι, καθάπερ άνδράποδον, απέκτειναν,—of those who were the perpetrafors of that noominable corruption, one put an end to himself by spicide, and the other, being apprehended by the pontiffs, was, in the market-place, flogged to death like a slave. The mode of execution

was this: the neck of the criminal was fastened in a furca, or sort of wooden collar, and then the rods or sticks were applied to the naked body, till he breathed his last. So Suetonius (Nero, 49.) describes it: nudi hominis cervicem inseri furcæ, corpus virgis ad necem cædi. That was puniri more majorum, as the same author intimates, and seems to have been adapted to this, as well as to other great offences.

COLLECTION OF THE CHALDEAN ORACLES.

PART I.

The following remains of Chaldean theology are not only venerable for their antiquity, but inestimably valuable for the unequalled sublimits of the doctrines they contain. They will, doubtless, too, be held this the highest estimation by every liberal mind, when it is considered that some of them are the sources whence the subline conceptions of Plato flowed; that others are perfectly conformable to his most abstruse dogmus; and that the goast important part of them was corrupted by the Gnostics, and, in this polluted state, became the fountains of barbarous and gigantically daring impiety.

That they are of Chaldaic origin, and were not forged by Christians of any denomination, as has been asserted by some superficial writers, is demonstrably evident from the following considerations: In the first place, John Picus, earl of Mirandula, in a letter to Ficinus, informs him that he was in possession of the Oracles of Zoroaster in the Chaldean tongue, with a commentary on them, by certain Chaldeau wise men. And that he did not speak this from mere conjecture (as Fabricius thinks he did) is evident from his expressly asserting, in a letter to Urbinatus (p. 256 of his works), that, after much labour, he had at length learned the Chaldean language. And still farther, as we' shall see, he has 'inserted in his works fifteen conclusions, founded on this very Chaldean manuscript. That this circumstance should have escaped the notice of mere verbalists, is not surprising; but it is singular that it should not have been attended to by a man of such uncommon erudition, and extersive reading, as Fabricius.

In the next place, as Porphyry, lambfichus, and Proclus, wrote large commentaries on these oracles, and are well known to have ranked amongst the greatest enemies of the Christian religion; there is not even poetical probability, that men of such great learning and sagacity should have been duped by the shallow artifice of some heretical Christian knave. To which we may add, that Porphyry, in his life of Plotinus, expressly mentions, that certain revelations ascribed to Zoroaster, were circulated, in his time, by many Christians and heretics who had abandoned the ancient philosophy, and that he showed, by many arguments, these revelations were spurious; from which it is evident, that the oracles commented on by him, were not those forged by the heretics of his time.

In the tifird place, Proclus in his MS. Scholia on the Cratylus of Plato, says, that the Oracles respecting the intelligible and intellectual orders were delivered by Theurgists, under the reign of Marcus Antoninus. It is clear, therefore, that the following oracles, which are collected from the writings of the Platonists, are of Chaldean, and not of Christian origin; not to mention that the dogmas they contain are totally dissonant from those of the Christian faith.

It is likewise evident, that some of these oracles may, with great confidence, be ascribed to the Chaldean Zoroaster. This appears from the Chaldean manuscript of Picus, in which those oracles were denominated Zoroastrian, which exist at present, with the Scholia of Psellus, under the title of The Magic Oracles of Zoroaster.

In consequence of this, I have distributed these oracles into four parts. The first division I denominate The Oracles of Zoroaster; the second, Oracles delivered by Theurgists, under the reign of Marcus Antoninus; because the oracles in this division relate to the intelligible and intellectual orders. The third division I call, Oracles which were either delivered by Theurgists, under Marcus Antoninus, or by Zorouster; because the collection of Psellus is

Ουτω και τοίς επι ΜΑΡΚΟΣ γενομενοις θεουργοις οι θιοι ως νοητας και νοιρας ταξεις εκφαινοντες, ενοκατα των θειων διακοσμων εξάγγελτικα της εδιοτητος αυτων παζαδεδωκασιν, ως καλοιντες εκίνοι τους θεους εν ταις προσπαυσαις θεραπικάις, της πάρ' αυτων εύπροιας ετυγχανος.

far from being complete, as we shall see from the conclusions of Picus, and the oracles in this division do not immediately relate to the intelligible and intellectual orders. The fourth division contains a few oracles of uncertain, or imperfect meaning, which I have thus denominated, from not having the MSS. in my possession, from which they were collected.

The learned reader will easily perceive that my labour, in forming this collection, must have been great, as I have accurately arranged each oracle under its proper head, and have given the authors and places where each (a few only excepted) may be found. He will likewise find, that I have added fifty Chaldean oracles, and fragments of oracles, to the collection of Patricius; and that I have given a far more correct edition of the text, than that of Le Clerc. Short notes are added, by way of comment, on the rost obscure of these oracles, and the exposition of Psellus is prefixed as containing the best account of the Chaldaic dogmas that can, at present, be obtained.

Manor-Place, Walworth. TAYLOR.

A CONCISE EXPOSITION OF CHALDAIC DOGMAS, BY PSELLUS.

"They assert that there are seven corporeal worlds, one Empyrean and the first; after this, three etherial, and then three material worlds, the last of which is said to be terrestrial, and the hater of life; and this is the sublimary place, containing likewise in itself matter, which they call a profundity. They are of opinion, that there is one principle of things; and this they celebrate as the one, and the good. After this, they venerate a certain paternal profundity, consisting of three triads; but each triad contains, father, power, and intellect. After this is the intelligible Lyax, then the

^{&#}x27;These three material worlds, are the inerratic sphere, the seven planetary spheres, and the sublimary regions.

² So Plato.

³ This is called, by the Platonists, the intelligible trind; and is celebrated by Plato in the Philebus, under the names of bound, infinite, and the mixed; and likewise of symmetry, truth, and beauty, which triad, he says, is scated in the vestibule of the good.

⁴ The Ignx, Synoches, and Teletarchæ of the Chaldeans, compose that divine order which is called, by the Platonists, the intelligible, and, at the same time, intellectual offer; and is celebrated by Plato in the Phædrus, under the names of the upercelestial place, Heaven, and the subcelestial arch.

Synoches, of which one is empyrean, the other etherial, and the third material. The Teletarchæ follow the Synoches. After these succeed the fontal fathers, who are also called Cosmagogi, or leaders of the world. Of these, the first is called once beyond, the second is Hecate, and the third is twice beyond. After these are the three Amilicti; and, last of all, the Upezokus. They likewise venerate a fontal triad of faith, truth, and love. They assert that there is a ruling sun from a solar fountain, and an archangelic sun; that there is a fountain of sense, a fontal judgment, a thundering fountain, a dioptric fountain, and a fountain of characters, seated in unknown impressions. And, again, that there are fontal summits of Apollo, Osiris, and Hermes. They likewise assert that there are material fountains of centres and elements; that there is a zone of dreams, and a fontal soul.

After the fountains, they say, the principles 3 succeed: for fountains are superior to principles. But of the vivific 4 principles, the summit is called Hecate, the middle ruling soul, and the extremity ruling virtue. They have likewise azonic Hecata, such as the Chaldaic Triecdotis, Comas, and Ecklustike. But the azonic 5 gods, according to them, are Serapis, Bacchus, the sense of Osiris, and of Apollo. These gods are called azonic, because they rule without restraint over the zones, and are established above the apparent gods. But the zonic gods are those which revolve round the celestral zones, and rule over sublunary affairs, but not with the same unrestrained energy, as the azonic. For the Chaldeans consider the zonic order as divine; as distributing the parts of the sensible world; and as begirding the allotments about the material region.

The inerratic circle succeeds the zones, and comprehends the seven spheres in which the stars are placed. According to them, likewise, there are two solar worlds; one, which is subservient to the etherial protundity; the other zonaic, being one of the seven spheres.

^{*} These fontal fathers compose the intellectual triad of the Greeks, and are Suturn, Rhea, Jupiter.

² The three Amiliett are the same with the unpolluted triad, or Curetes, of the Greeks. Observe, that a fontal subsistence means a subsistence according to cause.

³ These principles are the same with the Platonic supermundane order of cods.

⁴ The vivific triad consists, according to the Greek Theologists, of Diana, Proserpine, and Minerva.

The azonic gods are the same with the liberated order of the Greek Theologists, or that order which is immediately attuated above the mundune gods.

Of human souls, they establish a twofold foutal cause; viz. the paternal intellect, and the fontal soul: and they consider partial souls, as proceeding from the fontal, according to the will of the father. Souls of this kind, however, possess a self-begotten, and self-vital essence: for they are not like alter-motive natures. Indeed, since according to the Oracle, a partial soul is a portion of divine fire, a splendid fire, and a paternal conception, it must be an immaterial and self-subsistent essence; for every thing divine is of this kind; and of this the soul is a portion. They assert too, that all things are contained in each soul; but that in each there is an unknown characteristic of an effable and ineffable impression. They are of opinion, that the soul often descends into the world, through many causes; either through the defluxion of its wings, * or through the paternal will. They believe the world to be eternal, as likewise the periods of the stars. They multifariously distribute Hades, at one time calling it the leader of a terrene allotment, and at another the sublunary region. Sometimes they denominate it. the most inward of the etherial and material worlds; at another trae, irrational 5 soul. In this, they place the rational soul, not essentially, but according to habitude, when it sympathises with it, and energises according to partial reason.

They consider *ideas*, at one time, as the conceptions of the father; at another time, as universal reasons, viz. physical, psychical, and intelligible; and again, as the exempt hyparxes (or summits) of beings. They assert that magical operations are accomplished through the intervention of the highest powers, and terrene substances; and that superior natures sympathise with inferior, and especially with those in the sublunary region. They consider souls, as restored after death to their pristine perfection, in the wholes of the universe, according to the measures of their peculiar purifications; but some souls are raised by them to a supermundane condition of being. They likewise define souls to be media between impartible and partible natures. respect to these dogmas, many of them are adopted by Plato ⁸ and Aristotle: but Plotinus, Porphyry, Jamblichus, Proclus, and their

² The Jupiter of the Greeks, the artificer of the universe.
² Called by the Greeks, Juno.
³ That is, such souls as ours.

⁴ So Plato: seemy translation of the Phadrus.

^{&#}x27; Hades is with great propriety thus called: for the rational, when giving itself up to the dominion of the irrational soul, may be truly said to be situated in Hades, or obscurity.

^{6 1.} c. Jupiter, or the Demiurgus.

^{&#}x27;That is to say, the celestial and sublunary apheres.

s Indeed, he who has penetrated the profundity of Plato's destrines, will find that they perfectly accord with these Chaldaic dogmas; as is every where copiously shown by Proclus.

NO. XXXII. Cl.Jl. VOL. XVI.

disciples, adopt the whole of them, and admit them without hesita-

tion, as doctrines of a divine origin."

Thus far Psellus: I add, for the sake of those readers that are unacquainted with the scientific theology of the ancients, that as the highest principle of things is a nature truly ineffable and unknown, it is impossible that this visible world could have been produced by him without media; and this not through any impotency, but, on the contrary, through transcendency of power. For if he had produced all things without the agency of intermediate beings, all things must have been like himself, meffable and unknown. It is necessary, therefore, that there should be certain nighty powers between the supreme principle of things and us: for we, in reality, are nothing more than the diegs of the universe. These mighty powers, from their surpassing similitude to the first God, were very properly called by the ancients gods; and were considered by them as perpetually subsisting in the most admirable and profound union with each other, and the first cause; yet so as amidst this union to preserve their own energy distinct from that of the highest god. For it would be absurd in the extreme, to allow, that man has a peculiar energy of his own, and to deny that this is the case with the most exalted beings. Hence, as Proclus beautifully observes, the gods may be compared to trees rooted in the earth: for as these, by then roots, are united with the earth, and become earthly in an eminent degree, without being earth itself; so the gods, by their summits, are profoundly united to the first cause, and by this mean are transcendently similar to, without being, the first cause.

Lines too, emanating from the centre of a circle, afford us a conspicuous image of the manner in which these mighty powers proceed from, and subsist in, the ineffable principle of things. For here, the lines are evidently things different from the centre, to which, at the same time, by their summits, they are exquisitely allied. All these summits too, which are indescribably absorbed in centre, are yet no parts (i. e. powers) of it; for the centre has a

subsistence prior to them, as being their cause.

THE ORACLES OF ZOROASTER.

N. B. Wherever a star occurs prefixed to an oracle, it denotes that oracle to be an additional one, first discovered by me.

Εστι και ειδωλώ μεξις εις τοπον αμφιφαοντα.

The privation of accents is the system of the author.

disciples, adopt the whole of them, and admit them without hesita-

tion, as doctrines of a divine origin."

Thus far Psellus: I add, for the sake of those readers that are unacquainted with the scientific theology of the ancients, that as the highest principle of things is a nature truly ineffable and unknown, it is impossible that this visible world could have been produced by him without media; and this not through any impotency, but, on the contrary, through transcendency of power. For if he had produced all things without the agency of intermediate beings, all things must have been like himself, meffable and unknown. It is necessary, therefore, that there should be certain nighty powers between the supreme principle of things and us: for we, in reality, are nothing more than the diegs of the universe. These mighty powers, from their surpassing similitude to the first God, were very properly called by the ancients gods; and were considered by them as perpetually subsisting in the most admirable and profound union with each other, and the first cause; yet so as amidst this union to preserve their own energy distinct from that of the highest god. For it would be absurd in the extreme, to allow, that man has a peculiar energy of his own, and to deny that this is the case with the most exalted beings. Hence, as Proclus beautifully observes, the gods may be compared to trees rooted in the earth: for as these, by then roots, are united with the earth, and become earthly in an eminent degree, without being earth itself; so the gods, by their summits, are profoundly united to the first cause, and by this mean are transcendently similar to, without being, the first cause.

Lines too, emanating from the centre of a circle, afford us a conspicuous image of the manner in which these mighty powers proceed from, and subsist in, the ineffable principle of things. For here, the lines are evidently things different from the centre, to which, at the same time, by their summits, they are exquisitely allied. All these summits too, which are indescribably absorbed in centre, are yet no parts (i. e. powers) of it; for the centre has a

subsistence prior to them, as being their cause.

THE ORACLES OF ZOROASTER.

N. B. Wherever a star occurs prefixed to an oracle, it denotes that oracle to be an additional one, first discovered by me.

Εστι και ειδωλώ μεξις εις τοπον αμφιφαοντα.

The privation of accents is the system of the author.

There is also a portion for the image in the place every way splendid.

Μη δε το της υλης σχυβαλον χρημνώ καταλειψης.

Nor should you leave the dregs of matter in the precipice.*

Υη εξαξης, ινα μη εξιη εχουσα τι.

Nor should you expel the soul from the body, lest in departing it retain something.

Μη τα πελωρια μετρα γαιης υπο σην φρενα βαλλου.

Ου γαρ αληθειης φυτον ενι χθονι.

Μησε μετρει μετρα ηλιου κανονας συναθροισας.

Λιδιώ βουλη φερεται πατρος, ουχ ενεκέν σου.

Μηνης ροιζον εασον αει τρεχει εργώ αναγκης.

Λοτεριον προπορευμα σέθεν χαριν ουχ ελοχευθη.

Λει θυσιών ταρσος πλατυς, ου ποτ' αληθης,

Και θυσιών σπλαγχνών τε τομαι τα δ' αθυρματα παιτα,

Εμπορικης απατης στηριγματα. φευγε συ ταυτα,

Μελλών ευσεβιης ιερον παραδεισον ανοιγείν,

Ενθ' αρέτη σοφια τε και ευνομία συναγοιται.

Direct not your attention to the immense measures of the earth; for the plant of truth is not in the earth. Nor measure the dimensions of the sun, by means of collected rules; for it revolves by the eternal will of the tather, and not for your sake. Dismiss the sounding course of the moon; for it perpetually runs through the exertions of necessity. The advancing procession of the stars was not generated for your sake. The wide-spread aerial wing of birds, and the sections of victims and viscera are never true; but all these are mere pierile sports, the foundations of mercantile deception. Fly from these, if you meend to open the sacred paradise of piety, where victic, wisdom, and equity are collected together.

Δίζες ψυχης οχέτον, εθέν η τινί ταξεί Σωματί θητευσας, επί ταξιν αφ' ης ερουής Αυθίς αναστησείς, ιέρω λογώ εργον ενώσας.

Explore the river 7 of the soul, whence, or m what order, having

I that is, the irrational soul, which is the image of the ritional.

² That is, the region above the moon. 3 i. c. The human body.

^{4 1.} e. This terrestrial region.

i e. Lest it retain something of the more passive life.

⁶ This oracle is conformable to what Plato says in his Republic, that a philosopher must astronomise above the heavens, that is to say, he must speculate the celestial orbs, as nothing more than images of forms in the intelligible world.

⁷ c. c. The producing cause of the soul.

become a servant to body, you may again rise to that order from which you flowed, uniting operation to sacred reason.

ΑΙη κατω νευσης, κρημνος κατα γης υποκειται, Επταπορου συρων κατα βαθμιδος ην υπο δεινης Αναγκης θρονος εστι.

Verge not downwards, a precipice lies under the earth, which draws through a descent of seven steps, 2 and under which her the throng of dire necessity.

Ονοματα βαρβαρα μη ποτ' αλλαξης.

You should never change barbarous names.3

Πως εχει κοσμος νοερους ανοχηας ακαμπεις.

In a certain respect the world possesses intellectual inflexible sustainers.

Ενεργει περι τον εκατικον στοφαλον. Energist about the Hecatic sphere.

Πολλακις ην λεξης μοι, αθρησης παντα λεοντα. Ουτε γαρ ουραπος κυρτος τοτε φαινεται ογκος, Αστερες ου λαμπουσι, το μηνης φως κεκαλυτται, λθων ουχ εστηκε βλεπεται δε παντα κεραυνοις.

If you often invoke me, 6 all things will appear to you to be a hon. For neither will the convex bulk of heaven then be visible; the stars will not shine; the light of the moon will be convealed; the earth will not stand firm; but all things will be seen in thunder.

Παντοθεν απλαστφ ψυχη πυρος ηνιά τεινου.

On all sides, with an unfigured soul, extend the reius of fire.

Ω τολμηρας της φυσεως ανθρωπε τεχνασμα.

O man, thou subtle production, 8 that art of a bold nature!

Λαιης εν λαγοτιν Εκατης αρετης πελε πηγη, Ενδον ολη μενουσα, το παρθενιον ου προιεισα.

By sacred reason is meant the summit, or principal power of the soul, which Zoioaster, in another place, calls the flower of intellect

2 1. e The orbs of the seven p ancts.

³ For in every nation there are names of divine origin, and which possess an ineffable power in mystic operations.

* 1. c. The fontal lathers, or intellectual gods. By infleathle, understand stable power.

5 This sphere was of gold. In the finddle of it there was a supplier; and the sphere itself was turned round by means of a thong, made of the hide of an ox. It was likewise every where inscribed with characters: and the Chaldeans turning it round, made tertain invocations. But it is called Heratine, because dedicated to Hecate.

By me is meant the fountain or cause of the celestral constellation called the lion.

7 By unfigured, understand most simple and pure: and by the rems of fire, the unimpeded energy of the thenrgic life of such a soul.

Man is a subtle production, considered as the work of the secret art of

In the left-hand inward parts of Hecate is the fountain of virtue, which wholly abides within, and does not emit its virginal nature.

Πνικα μεν βλεψης μορφης απες ευιεςον πυς, . 1αμπου ενον σχιςτηδον ολου καπα βενθεα κοσμου,

Κλυθι πυρος φωνην.

When you behold a sacred fire without form, shining with a leaping splendom through the profundities of the whole world, hear the voice of fire.

Μη Φυσεως καλεσης αυτοπτου αγαλμα.

You should not invoke the self-conspicuous image of nature. 3

Η φυσις πειθει ειναι τους δαιμονάς αγνους,

Λαι τα κακης υλης βλαστηματα, χρηστα και ετθλα.

Nature persuades us, that there are holy demons, and that the blossoms of deprayed matter i are useful and good.

Ψυχη η μεροπων θεον αγξει πως ες εαυτην, Ουσεν θνητον εχουσα, ολη θεοθεν μεμεθυσται. Ιρμονια αυχει γαρ, υβ' η πελε σωμα βροτειον.

The soul of mortals compels, in a certain respect, divinity into itself, passessing nothing mortal, and is wholly inchriated from deity: for it glories in the harmony under which the mortal body subsists

Πγεισθώ ψυχης βλόος αμβροτον, ομίμ ιτα δ' αροην Παντα εκπετασον ανλ

The immortal depth 'o' the soul should be the leader; but schemently extend all your eyes a upwards.

Μη πνευμα μολυνης μη δε βαθυνης το επιπεδον.

You should not defile the spirit, " nor give depth to a superficies.

-livinity. But he is of a hold nature, as exploring things more excellent than limited.

Hecate, according to the Chaldeans, is the centre of the intellectual gods; and they say that in her right-hand parts she contains the fountain of souls, and in her left, the fountain of the virtues.

2 This oracle relates to the vision of divine light.

is c. The image to be invoked in the mysteries must be intelligible, and not sensible.

+ By the blossoms of deprayed thatter, understand the damons called

Eml, but which are not so essentially, but from their office.

That is, the human soul, through its immortality and purity, becomes replete with a more excellent life, and divine illumination, and is, as it were, raised above itself.

" i. e. Unapparent and intelligible harmony.

i.e. The summit or flower of its nature.
i.e. All the gnostic powers of the soul.

Understand by the spirit, the actial vehicle of the soul; and by the superficies, the ethereal and lucid vehicle.

Ζητησον παραδεισον.

Séek Paradise.

. Σον αγγειον θηρες χθονος οικησουσιν.

² The wild beasts of the earth shall inhabit thy vessel.

Εκτεινας πυρινον νουν

Εργον επ' ευσεβιης, ρευστον και σωμα σαωσεις.

By extending a ficiv intellect 3 to the work of piety, you will also pieserve the flowing body.

Εκ δ' αρα κολπων

Γαιης θρωσκουσι χθονιοι κυνες, ουποτ' αληθες

Σημα βροτω ανόρι δειχνυντες.

From the bosom therefore of the earth terrestrial dogs a leap forth, who never exhibit a true sign to mortal man.

Παντα γας εξετελεσσε πατηρ, και νω παρεδωκε

Δ υτερώ, ον πρώτον κληϊζεται εθνέα ανδρών.

The Father's perfected all things, and delivered them to the second intellect, which the nations of men call the first.

Αι ποιναι μεροπων αγκτειραι.

The furies are the bonds of men. 7

Συμβολα γαρ πατρικός νους εσπειρε ταις ψυχαις.

The paternal intellect disseminated symbols in souls.

Βιη σωμα λιποντων ψυχαι καθαρωταται.

Those souls that leave the body with violence are most pine. 9

Οτι ψυχη πυρ δυναμει πατρος ους α φαεινον,

Αθανατος τε μενει και ζωης δεσποτις εστι,

Και ισχει κοσμου πολλα πληρωματα κολπων.

The soul being a splendid fire, through the power of the father remains immortal, is the mistress of life, and possesses many perfections of the bosoms of the world.

The Chaldaic Paradise is the choir of divine powers about the Father of the universe; and the empyrean beauties of the deminigic fountains.

By the vessel is meant the composite temperature of the soul; and by the wild beasts of the earth, terrestrial damons. These, therefore, will reside in the soul which is replete with irrational affections.

i. c. Au intellect full of divine light. + i, e. Material dæmous.

5 i. e. Saturn. 6 i. e. Jupiter.

⁷ That is, the powers that punish guitty sonls, bind them to their material passions, and in these, as it were, suffocate them: such punishment being finally the means of purification. Nor do these powers only afflict the vicious, but even such as convert themselves to an immaterial essence: for these, through their connection with matter, require a purification of this kind.

That is, symbols of all the divine natures.

9 This oracle praises a violent death, because the soul, in this case, is

induced to hate the body, and rejoice in a liberation from it.

The soul is the mistress of life, because she extends vital illuminations to body, which is, of itself, destitute of life.

* Πατης ου φοβον ενθρωσκεν, πειθώ δ' επιχεει.

The father did not hard forth fear, but infused persuasion. 1.

Εαυτον ο πατηρηρπασεν,

Ουδ' εν εη δυναμει νοερα κλεισας ιδιον πυρ.

The tather 2 has hastily withdrawn himself, but has not shut up his proper fire, in his own intellectual power.

Εστι τι νοητόν, ο χρη σε νοειν νοου ανθει. •

There is a certain intelligible 3 which it becomes you to understand with the flower of intellect.

Ψυχης εξωστηρες αναπνοες ευλυτοι εισι.

The expelling powers + of the soul which cause her to respire, are of an unrestrained nature.

> Χρη σε σπευδείν προς το φαις και πατρυς αυγας, Ενθεν επεμφθη σοι ψυχη, πολυν εσσαμενη νουν.

It becomes you to hasten to the light and the rays of the Father, whence a soul was imparted to you, invested with an abundance of intellect.

Εισι παντα πυρος ενος εκγεγαωτα.

All things are the progeny of one fire.5

Α νους λεγει, τω νοειν δηπου λεγει.

That which intellect says, it undoubtedly says by intillection. a

Α Α τους δε χθων κατωρυεται ες τεκνα μεχρις.

Ha! ha! the carth from beneath bellows at these as far as to their children. 7

Μη συναυξησης την ειμαρμένην. You should not increase your fate. *

Ου γαρ απο πατρικής αρχής ατέλες τι τροχάζει

' That is, as divinity is not of a tyrannical nature, he draws every thing

to himself by persuasion, and not by fear.

2 That is, Saturn, the summit of the intellectual order, is perfectly separated from all connection with matter; but, at the same time, imparts his divinity to interior natures.

3 Meaning the intelligible, which immediately subsists after the highest

That is, those powers of the soul which separate it from the body.

That is, of one divine nature.

6 That is, the voice of intellect is an intellectual; or in other words, an

1 mmaterial and indivisible energy. The meaning of the oracle is, that even the very children of the impious are destined to subterianean punishments; and this, with the greatest propriety; for those who, in a former life, have perpetrated similar crimes, become, through the wise administration of Providence, the members of one

8 Fate is the full perfection of those divine illuminations which are received by Nature; but Providence is the immediate energy of deity. Hence, when we energise intellectually, we are under the dominion of

Nothing imperfect proceeds, according to a circular energy, from a paternal principle.

Αλλ' ουκ εισδεχεται κεινής το θελειν πατρικός νους

Μεχρις αν εξελθη ληθης, και ρημα λαληση Μνημην ενθεμενη πατρικου συνθηματος αγνου.

But the paternal intellect will not receive the will of the soul, till she has departed from oblivion; 2 and has spoken the word, assuming the memory of her paternal sacred impression.

Πνικα δ' ερχομενον προσγειον δαιμον' αθρησης,

θυε λιθον Μνιζουριν επαυδων.

When you behold the terrestrial 3 damon approaching, vocafe. rate and sacrifice the stone MNIZURIM.

Μανθανε το νοητον επει νοου εξω υπαρχει.

Learn the intelligible, for it subsists beyond intellect.4

Νοουμεναι ιυγγες πατροθέν νοεουσι και αυται

Βο-λαις αφθεγκτοισι κινουμεναι ωστε νοησαι.

The intelligible Tynges possess intellection themselves from the Father, so far as they energize intellectually, being moved by meffable councils.

The above Zoroastrian Oracles are from Psellus.

CRITIQUE, ON OSSIAN'S TEMORA,

Shewing its great resemblance to the Poems of Homes, Virgil, and Milton.

PART II .- (Continued from No. XXVIII. p. 276.)

AMONG the hodies of the inanimate world, the diamond is distinguished by the peculiar hardness of its texture, which resists

Providence; but when corporcally, under that of Fate. The oracle therefore admonishes to withdraw ourselves from corporeal energy

For divinity is self-perfect; and the imperfect cannot proceed from the

That is, till she has recovered her knowledge of the divine symbols. and sacred reasons, from which she is composed; the former of which she receives from the divine unities, and the latter from the sacred ideas. . .

³ Terrestrial dæmons are full of deceit, as being remote from divine knowledge, and replete with dark matter: he, therefore, who desires to receive any true information from one of these, must prepare an altar, and sacrifice the stone Mnicurum, which has the power of causing another greater demonstrate to appear, who, approaching invisible to the material domain, will give a true answer to the proposed question; and this to the interrogator limited.

The intelligible is two-fold; one kind being co-ordinate with intellect,

but the other being of a super-essential characteristic.

5 See the concise Exposition of Psellus, prefixed to the potteles

the impression of every object to which it is opposed. In a similar manner, we discover, among epic writers, the poet of intrinsic genius by his display of himan character: this knowledge of the manners of men is the test by which we are enabled to decide upon the geniueness of the coin. Let us examine, therefore, how for Ossian has either performed or neglected the precepts which regulate this department of the heroic poem.

The characters, according to Aristotle, should be marked and well distinguished. They should have some ruling virtue or passion, to which all their actions may be attributed, and which is the source from which they spring. The poet must exercise his judgment in the choice of character: for, although among mankind we meet with many individuals who order their lives according to no fixed system of conduct; whose actions are the offspring of no one parent-passion, but seem to be generated by a multiplicity of principles, in kind often dissimilar and sometimes opposite; yet such loose and indeterminate characters are by no means suitable to the epopee. So, at least, I understand the anthor of the Treatise on Poetry, when he says, that the characters ought to be good.' The characters should likewise be proper. Old age must not be hurried on with the ardor and impetuosity of youth: nor must the young warrior fight with the caution, and speak with the garruhty, of him who has lived three ages. But to distinctness and propriety of character must be added consistency and muformity. The coward, who once flies, must always shrink from his opponent; and the hero, who in the outset attacks his enemies with bravery, must continue the same comageous personage throughout the poem; or, if at any time a brave man retreats before a superiority of numbers, he must do so with digmty.

"Thus the grim hon his retreat maintains,
Beset with watchful dogs and shouting swams;
Long stands the showling darts and missile fires,
Then sourly slow the indignant beast retnes."

This elucidation of manners is the great bulwark of Homer, which has ensured to him the entire pre-eminence over all poets, antient and modern. Not only do the principal actors in his lhad shine forth with an extraordinary, degree of subline grandeur. but those very individuals, whose character would naturally create aversion, if not detestation, are placed in situations which interest our

Περί δί τὰ ήθη τεττας ὁ Ιστιν, ὧν δεῖ στοχάζεσθαι ει μι καὶ π; Σου, ὅπως χζηττὰ ή. Εξιι δὶ ήθος μεν, ἱαν, ὡσπες ἐλέχθη, ποιῆ φανιτὰν ἡ κόγος, ἡ ἡ περάξει, προκέρετιν τικεί φαύρον μιν, ἰὰν φαύλην χρηστον δί, ἐὰν χρήστην. Ἐστι δὲ ἐν ἐκάστιν κει, &c. Aris. de Poet. Edit. Tyrwhitt. Sec. 28.

Notandi sunt tibi mores. Hor. Ar. Poet.

eelings in their behalf, and make our hearts sympathise with them. While the mere armour of Achilles drove the victorious Trojans to the gates of their city, the graceful appearance of Helen, the malignant source from which flowed all the Grecian and Trojan sorrows, melted the soul of even the aged warriors of Troy. But, in this respect, the mighty powers of the poet have been exerted to a degree which is questionable, if not faulty. The warlike son of Priant, who bade adien to his Andromache with the utmost tenderness of conjugal affection, and unhelined his brows to salute the living testimony of their loves, diminishes too much our auxiety for the success of Achilles, and afflicts our mind for the disasters of Hum. But the variety is as wonderful as the sublimity of his characters. Here too, however, the poet seems to have strained his invention: his heroes would, perhaps, lose nothing if deprived of the foolery of Thersites, and his gods would be more dignified without the buffoonery of Vulcan.

In this characters there is something remarkable,—that in the same part in which Homer has excelled, Virgil has been deficient. His characters are neither so grand, so interesting, nor so varied as those of Homer. His Æneas, without a single frailty, is a lifeless personage, who must, when considered deliberately, command our admitation, but does never, at the time, warm our affections.

The subject of the Paradise Lost did not afford great scope for variety of character; but Milton has autroduced all the variety of which his work was capable. In the squeamishness of criticism it might be said, that he has fallen, in some measure, into the error of Homer, by exalting too much the enemy of mankind. He has cast over Satan a profusion of light, which has thrown Adam into the shade.

If Ossian, in the drawing of character, has falled short of the perfection of the Father of Poetry; and has neither shown so great a penetration into the science of man, nor introduced so much variety into the poem of Temora, he has, at least, surpassed Virgil both in the diversity and in the execution of his designs. But perhaps the characters of Temora are as much varied, as the age and country of the poet permitted. It is somewhat to be wondered that Virgil, in the characteristical part of the poem, has tallen short of the two earlier poets; us the age of refinement in which he wrote must have presented a more extended field of hisman action, for the occupations of men multiply with the progress of societs, and a multiplicity of employment must augment the variety of character. But this advantage was counterbalanced by a disadvantage of superior weight. Although man, in an improved condition, is coloured with tints of character more varied than in a rude state, yet these colours must be very narrowly inspected before the observer can discover distinctly what ray of light they diffuse. In the childhood of society, the actions, and the motives which lead to them, are closely connected, and their connexion is easily discoverable: on the contrary, when society has grown up, man finds an interest in concealing the motives of many of his actions, and covers them accordingly with a veil, frequently too thick for penetration. If Virgil, therefore, surveyed a field of larger dimensions, he had more difficulty in discriminating the particular plants which grew in it; and, although the narrow field which Homer and Ossian surveyed, presented a very limited variety of species, yet these were well marked, and could easily be

distinguished from each other.

Bravery is the predominant feature of all Ossian's actors: but, although they are all brave, the bravery of each is different in kind, and every actor possesses his own peculiarity of character. lingal, the hero of the poem, is perhaps the only instance that can be adduced, not only in modern times, but in all antiquity, of "a man of perfect and consummate virtue," in whose successes and misfortunes we feel fully interested. He is the warrior of his age, the avenger of the wrongs of the mjured, and, in peace, the promoter of his people's happiness, and the source of their prosperity: he never undervalues the virtues of his enemies, nor glories over the calamities of a fallen foe: wherever he directs his steps victory attends him, and even at his name his opponents tremble: he teems with an affectionate love towards his children, and is agitated with a generous concern about the welfare of his friends: in short, he is almost a god in the habit of mortality: he is clothed with the perfections of Æneas, without his insipidity, and shines in the virtues of Hector, without his ferocity. The reason of the success of Ossian, in thus pourtraying the utmost perfection of human nature, without diminishing our interest in the character, has been correctly and beautifully pointed out by Dr. Blan.' "To this it has much contributed," says he, " that the poet has represented him as an old man; and by this has gamed the advantage of throwing around him a great many circumstances peculiar to that age, which paint him to the fancy in a more distinct light. He is surrounded by his family; he instructs his children in the principles of virtue; he is narrative of his past exploits; he is venerable with the grey locks of age; he is frequently disposed to moralise like an old man, on human vanity and the prospect of death. There is more art, at least more felicity in this, than may at first be imagined. For youth and old age are the two states of human life, capable of being placed in the most picturesque lights. Middle age

Dissertation on the Poems of Ossian, by Hugh Blair, D. D.

is more general and vague; and has fewer peculiar circumstances. And when any object is in a situation, that admits it to be rendered particular, and to be clothed with a variety of circumstances, it always stands out more clear and full in poetical description."

Ossian himself, uniting, in one person, the warrior and the baid, the father, the brother, and the son, is likewise a character of particular interest. His lamentation over his son, Oscar; his attention to his brother, Fillan, when he goes to attend the movements of his enemy by night, and the consolations which he pours into his breast when he discovers him vanquished by Cathinor; the respect and love which he entertains for his father, Fingal; are all the beautiful traits of an amiable character.

The noble Cathmor is an enemy well worthy of the mighty Fingal. The first mention made of him in the poem is by the blood-thirsty and dark-designing Cairbair, when he is secretly plotting the murder of young Oscar at the feast. After he has ordered the bard to take " the harp, and bid Oscar to the feast," he adds: " Cathmor, my brother, is not here. He is not here with his thousands, and our arms are weak. Cathmor is a fee to strife at the feast. His soul is bright as that sun." Cairbair dreaded the approach of Cathmor, as he knew his generous soul would have revolted against so atrocious a deed. He is famed for hospitality to strangers; but so delicate are his feelings, that he shows the voice of praise. The generosity of his scutiments on the death of Fillan, and the struggle which he discovers between his love for Sulmalla, and his duty as the leader of his people, are the touches of a masterly painter. He had one foible, but it arose from an excess of virtue, he loved too fondly the gloomy Cairban.

But Fillan,—a young warrior, commencing his career of inditary glory, lamenting his youth, which deprives him of leading the troops to battle, impetitious for fight, and panting for fame,—is a character which entwines itself round the heart of every reader; and alone proves that the author of Temora was a poet of no mean genius, but an attentive observer of human nature, and one who knew well what strings to touch in order to fire and to melt the heart. How natural is his desire to engage the foe, on that night when he is sent out to watch their motions! What can be more melting than that description of the emotions of his mind, when Fingal was appointing the general, who was to conduct the army to battle: "Bent over a distant stream he stood: the tear hung in his eye. He struck at times the thistle's head with his inverted spear." And can any thing be more sublime than the account of the last deeds, and of the fall of Fillan!

We must not pass Sulmalla over in silence. In he character are displayed some of the most interesting particulars in the life of

Her ardent love for Cathmor, which prompted her, disguised as a warrior, to follow him to the field of battle—the description of the manner in which her soul was first filled with love of him-her song, as she sat beside Cathmor, unconscious of being perceived by him-the tender way in which she awakes, and advises him to shun the danger, when she hears the sound of the shield of Fingal, and then, her almost instantaneously bursting forth into a wish that he may gain renown in war, and return to her allumined with glory—delineate well the genuine qualities of the female character, always more sincere than that of man in its affections, and more vehement in its love. Virgil's Dido is likewise a master-piece of its kind, and is, as I think, the most finished character in the whole Æneid: but, as she was previously married, she does not appear in the simplicity, nor act with the delightful timidity of a young woman, who is burning with the pure flame of a first We might have expected that Lavinia would be almost the counterpart of Sulmalla; but she discovers little interest in the success either of Ameas or of Turnus, and is guided more by the rules of prudence, than by the artless dictates of nature. Such a character may be worthy of high commendation, but cannot be so well suited to excite lively interest, as one which is more simple and less prudent: the Lavinia of Virgil may, I think, be justly classed among that order of womankind, whom Sn Richard Steele has ingeniously called the "outrageously virtuous."

The interior actors in Temora are equally distinguished by peculiarity of character. Foldath is brave, imperious, overbearing, atrociously cruel, revengeful, and unrelenting. It dalla is likewise brave, but his bravery is tempered with wisdom, and softened by humanity and gentleness; his speech is eloquent; his person elegant; and his countenance beams with screnity and mildness.

Resides human actors, an epic poet may introduce beings of a higher order, and these form, what has been termed, the machinery of the poem. It is by no means my intention to inquire whether this machinery be a beauty or a blemish in an epic poem, it is sufficient to consider whether Ossian, in the use of that of which he has made choice, has adhered to the rules of criticism, or, in other words, whether he has employed, naturally and at a proper season, the agency of supernatural beings. A poet, then, must be extremely temperate in the use of machinery, and so blend together the marvellous and the probable, as to remove from his spoem the character of being entirely fictitious. If he be inattentive to this circumstance, very few readers will derive any degree of pleasure from his performance; for, we can feel no interest in perusing a number of fabulous stories, which, we are certain, could never possibly have occurred. To secure success in the effect of his machinery,

he must rest the foundation of it upon the popular belief and superstition of his country, and he is by no means entitled to fabricate any system of marvellous fables that he pleases, or even to incorporate into the poetry of one nation the fabulous creed of another. "Virgil and Homer," says Addison, "might compliment their heroes by interweaving the actions of deities with their achievements; but for a Christian author to write on the pagan creed, to make Prince Eugene a favourite of Mars, or to carry on a correspondence between Bellona and the Marshal de Villars, would be downlight puerlity, and unpardonable in a poet that is past sixteen."

On examining the fliad and the Æneid we shall find that such is the machinery of Homer and Virgil: the stories of the gods and goddesses, who so frequently interpose in behalf of their heroes, of Achilles, of Hector, and of Eneas, composed the religious belief of Greece and Rome; in these countries was to be found the outline, at least, of the mythology which the poets have perhaps embellished, and made more full and complete. critics, I know, have maintained an opposite opinion, and have contended that the machinery of Homer is entirely of his own invention; but the absurdity of such a supposition will, on a very slight consideration, become sufficiently apparent; for, not to say any thing of the incapatity of one man, how comprehensive soever his imagination might be, to invent so complicated a machine as the pagan theology, and that for the purpose of only embellishing a poem, let us imagine what effect a modern heroic poet would produce upon his heroes, if he were to introduce into his poem a complete mythology of his own invention, and were to interweave with the exploits of his heroes the actions of a number of gods and goddesses, who have been never before heard of, whose existence is imfounded on any tradition, and who are, in short, the creatures of his own wild fancy.

The machinery of Ossian consists of departed heroes, who are supposed to hover in the regions above, and to feel a hyely interest in the actions of the friends, whom they have left on earth—to rejoice with them in their successes, and to mourn with them in their calamities. The listory of ancient Scotland will fully prove how well adapted such a machinery must have been to the prejudices of the Highlanders, who are so notorious for their superstition. But his machinery is entitled to a higher praise. It is not merely the superstitions belief of one country, it is the belief of the world, it is now fostered in every inhabited spot of the universe, it commenced, and it is probable that it will end, with time.

Ossian is also extremely correct in the use of his machinery; he never employs it unless with the greatest propriety, and on the most solemn occasions. In Temora we have only three ghosts: the first is that of Cairbair, which appears to warn Cathmor of his approaching death; the next is that of Fillan, which in these words rouses Fingal to battle—"Sleeps the husband of Clatho? Dwells the father of the Fallen in rest? Am I forgot in the fields of darkness; lonely in the season of night?" and the last is that of Cathmor, which, by its apparition, acquaints Sulmalla with the death of that hero.

I cannot in a better manner conclude my remarks on this subject, than by quoting the comparison which Dr. Blair has drawn between the merits of the machinery of Homer and that of Ossian. "Ossian's mythology is, to speak so, the mythology of human nature; for it is founded on what has been the popular belief in all ages and countries, and under all forms of religion, concerning the appearances of departed spirits. Homer's machinery is always lively and amusing; but far from being always supported with proper dignity. The indecent squabbles among his gods surely do no honour to epic poetry, whereas Ossian's machinery has dignity upon all occasions. It is indeed a dignity of the dark and awful kind, but this is proper, because coincident with the strain and spirit of the poetry. A light and gay mythology, like Homer's, would have been perfectly misintable to the subjects on which Ossian's genius was employed."

On a future occasion I shall view the machinery of Ossian in the light of ghosts, or the spirits of departed heroes, and trace the strong similarity which exists between them, and those of Homer and Virgil.

Edinburgh, Nov. 1817.

LENNOX.

MISCELLANEA CLASSICA.

NO. II.-[Continued from No. XXX. p. 3044]

xxvi. The use of Asia and Africa in the Roman writers, for the part of those continents subject to Roman jurisdiction, is analogous to our own use of America for the United States.

xxvii. Brunck, in his note on Soph. Œd. Tyr. 981, Πολλοί γὰρ ήδη

κάν ὀνείρασιν βροτῶν, κ. τ. λ. cites a corresponding passage from Cic. de Divin. Suctonius, who is a great dealer in stories of that nature,

mentions a similar dream of Casar's. (Vit. Cas.)

xxvni. "The Flamen of Jupiter was an office of great dignity—but subjected to many restrictions; as, that he should not ride on a horse." Adams; Rom. Ant. p. 311, sixth edition. I know not whether it be worth intentioning, that a similar restriction, though originating in different motives, and enforced only by popular opinion, prevails with regard to the modern Popes. "Clement XIV (Ganganella,) was advised by his physicians to ride; he rode in the neighbourhood of his Alban Villa, and, it is said, offended the people of the country not a little by that supposed levity." Enstace, Classical Tour through Italy, Appendix, p. 389, third edition.

xxix. "A ship," says Lord Kaimes, speaking of the figurative expressions of the ancient Icelandic poetry, "is termed horse of the floods." Sketches of the History of Man, p. 156. The same meta-

phor occurs in Homer:

ούδε τί μιν χρεών

νηῶν ὡκυπόρων ἐπιβαίνεμεν, αἴθ' άλὸς ἴπποι άνδρασι γίγνονται. Od. Δ. 707.

xxx. "The guests used sometimes, with the permission of the matter of the feast, to put some part of their entertainment into their mappa, table-napkin, and give it to their slaves to carry home. Adams, Rom. Aut. p. 439. A custom resembling this prevails in our West India settlements. A guest, at an entertainment, makes a collection from the dessert, which he sends home to his family after the Roman fashion; and he who omits this necessary act of civility, is in danger of meeting with a cool reception on his return.

xxxi. "In after times, close attention was paid to the rearing of shady trees, aromatic plants, flowers, and evergreens; as myrtle, ivy, laurel, box-wood, &c. These, for the sake of ornament, were twisted, and cut into various figures, by slaves, trained for that purpose, called Topiarn." Adams, p. 531. The reader will recollect the descriptions in the Spectator, of a similar custom prevalent in England about

the time of Queen Anne.

axxii. The following are instances of variation in quantity among the Latin poets:

Cientes venere Sicana. Virg. Sicana procumbit pubes. Sil. Ital. Duriusque Tagusque. Sil. Ital. Roseis formosus Duria ripis. •Cland.

. Compulinus, dirum Syphacem. Claud. -- Syphacem is the commen quantity.

exxini. There are a few lines in Homer, consisting exclusively of spondees.

Ψυχήν κικλήσκων Πατροκλήσε δειλοίο. II. Ψ. 221. Σίτου καὶ κρειῶν ήδ' οίνου βεβρίθασιν. Od. O. 333. Τὰ δ' ἐν Μεσσήνη ξυμβλήτην ἀλλήλουν. Ib. Φ. 15. Σείρην δὲ πλεκτήν ἐξ αὐτοῦ πειρήναντες. Ib. X. 175. 192. So in Ennius:

Olli respondit rex Albai Longai.

From which Virgil not improbably took his well-known-

Olli sedato respondit corde Latinus.

xxxiv. The Greek heroic poets use ductyls much more copiously than the Latin. The form of the hexameter, containing five ductyls, which is common in Homer, and sometimes occurs four or five times in succession, is not frequent in Virgil: there are only six or seven instances of its occurrence twice together. Nearly the reverse may be said of the line containing five sponders, which only appears once doubled in Homer (II. H. 473, 474.) These observations, it is true, are of little importance; but they contribute to illustrate the genius of the two metrical systems.

xxv. The Latin poets, at least from the Augustan age downwards, scarcely ever admit more than three elisions into their hexaineter verses. The only instances I recollect of the contrary, are the fol-

lowing:

Is primam ante aciem, digna atque indigna relatu. Virg. Nullane babes vitia! Imo alia, et fortasse minora. Hor. Certatimque omnes uno ore, arma, arma requirmit. Ovid.

Lucretius is more free: we find in him a line containing five elisions, and another containing four in sequence:

Verum ubi equi atque hominis casu convenit imago.

Even this last is surpassed by a pentameter of Catullus:

Quam milii, qui me unum atque unicum annicum habuit.

Our Cambridge readers will perhaps recollect "plurunaque hem hem atque hem hem." Heinsius (de Contem. Mor. iv) has ventured,

Circum acies fusa aligerum, atque exercitus omnis.

xxxvi. There are two lines in Homer, which, from the present manner of writing them, have a peculiarly inhalmonlous appearance, because a single word forms the third foot: something like the ruggedness of τοῦ μ' ἀνιστορεῖς νόμου πέρι;

Μάντι κακών, ου πώποτέ μοι τὸ κοτίγυον είπας. ΙΙ. Α. 106.

⁷ Η οὐ μέμνη, ὅτι σ' ἐκρέμω ὑψόθεν, ἐκ δὲ ποδοῖιν. [1. O. 18. Such, at teast, is the reading in all the editions I have noticed. Might not the harshness in question be removed, by writing οὔπω ποτὲ, and σε κρέμω?

xxxvii. In Il. X. 157-9, all the editions that I recollect read,

Τῆ ρα παραδραμέτην, Φεύγων, ὁ δ' ὅπισθε διώκων πρόσθε μὲν ἐσθλὸς ἔφει γε, δένκε δέ μιν μέγ' ἀμείνων καυπαλίμως.

Perhaps it would be better to print the passage thus:

Τη ρα παραδραμέτην, φεύγων, ο δ΄ οπισθε διώκαν

(πρόσθε μεν ἐσθλὸς ἔτευγε, δίωκε δέ μιν μέγ' ἀμείνων)

xαρπαλίμως.

xxxviii. In answer to an argument brought against the hypothesis of Ατρείδης, Πηλείδης, &c. being trisyllables, because they never occur in such situations as to render it necessary that they should be

NO. XXXII. Cl. Jl. VOL. XVI.

pronounced as trisyllables, it has been urged, that Homer scarcely ever places any word, consisting of three long syllables, in the collocation particularly alluded to (as in "jucundi meta soporis"), and that therefore, on this account alone, the words in question are inadmissible. Though the question is, doubtless, of little or no import to the main argument, it may be worth while to observe, that the result of a careful enumeration of the instances occurring in the Iliad, and a more cursory investigation of those in the Odyssey, discovered about fifteen or sixteen in the fornier, and four only in the latter. Many of these were formed by proper names, in which case some liberty might be allowed, or admitted of easy alteration: thus, Ilatpinaless for Ilatpóchess

axxix. The following example of a received form of expression among the Greeks occurs in the Institutes of Menn, as translated by Sir Wilham Jones: "A son of a Brahmi, or wife by the first ceremony, redeems from sin, if he perform vuluous acts, ten ancestors, ten descendants, and lumiself, the twenty-first person.

xl. The expression ἀφείλετο, in Æsch. Pers. 434 (ἔως κελαινῆς νυκτὸς ὅμμ' ἀφείλετο), which has perplexed the commentators, occurs in a sumfar conjunction in Xen. Hel. I. 2. 16. ᾿Αλκιβάίδης δὲ ἐδιωκεμέχρι σκότος ἀφείλιτο.

xh. Adams explains the word antiquo, used in expressing dissent to a law, by "Antiqua probo," I like the old way. Perhaps the real derivation is from ante, or åvri, implying here opposition; as antica, a front gate, is derived from the same original.

xhi. A fine was imposed, at Lacedamon, on those who omitted to marry within a certain age, by what was called ôψεγαμίου δίκη. A similar tax, under the name of æs uxorium, was levied by the censors at Rome.

value. To the instances of metrical lines, adduced in No. AND. of this Journal, add the following.

I. DEMOSTHENES.

ή τὸ παρὸν, τὴν τοῦ συμβούλου τάξιν ἀπαιτεῖ. De Cor. 57. ο πᾶσι χοινόν ἐστιν ἀνθράποις, ὅταν— 1b. 59. βλασφημίας ἄπασι, καὶ μάλιστά σοι. ib. 82. πολλοὺς ἀπηγόρευε μὴ καλεῖν ἐμὲ—de Fals. Leg. (ὑ.

Quad sequitur vero, non solum religionem de Leg. ii. 2.

Qui secus faxit, Deus ipse vindex—Frag. xii. Tabularum apud Cicde Leg. ii. 8

xliv. It has been suggested, that the fragment of Sappho, προς άγ-γελος, Ιμερόφωνος άηδων, (Frag. Ixxiii. Mus. Crit. No. 1.) was originally a

Sapplie line, standing thus: γρος άγγελ', ημερόφων άηδών.

xlv. In the Quarterly Review, (No xxix. art. Barbary States,) a well-known trait of Grecian superstition is mentioned, as prevalent among the Moors of Barbary. "Among their superstitions may be reckoned—their abstaining from mentioning the word 'death,' which they avoid as cantiously as the courtly divine did the 'mention of hell to ears polite.'" There seems to be something of a smill r cupkemi-voius among ourselves, when, by way of intimating the possibility of a particular person's dying, we say, "should any thing happen." In the "Tales of my Landlord," vol. i. a Scottish borderer, one of the personages of the story, happening to mention in conversation the name of fairies, unmediately recollects himself, and afters it to "gude folks," observing that the beings in question are, hable to be offended when called by their proper name. This also reminds us of the Eimérvices of the Greeks.

xlvi. Since the article on the 24th Odyssey, in an earlier Number, was written, the author has not with a passage in Cowper's Letters, (Let. eccm.) where that nuthor mentions it as his opinion, that "except from the moment when the Ithacans begin to inclitate an attack upon the cottage of Lacrtes, and thence to the end, the book is the work of Homer." " I believe perfectly," says he, " that, Homer himself alone excepted, the Greek poet never existed, who could have written the speeches made by the shade of Agamemnon, in which more msight into the human beart is discovered, than I ever saw in any other work, unless in Shakespeare." Might not, however, the characteristic parts of this passage be suggested by the conversation of Ulysses and Agamemnon in the 11th hook?—"The battle," he adds, "with which the poem concludes, is, I think, a patry battle, and there is a huddle in the management of it unworthy of my favourite, the favourite of all ages." The same thought had occurred to the writer of this ar-The battle in question is such as might easily have been cornpiled from various parts of the luad: the interposition of Jupiter to prevent the continuance of warfare is a repetition of a similar incident in the 8th Had (l. 130, et seqq.) There are some passages in the 8th Odyssey, which seem scarcely worthy of Homer: it would be dangerous, however, to impeach the authenticity of these parts on such slender ground.

xlvii. Blomfield, Gloss. in Pers. 24, observes: "Regem Persarum

τον μεγάλον βασιλέα (mallem μέγαν) audiisse, ut suum Francogalli dicebant le Grand Monarque, non opus est ut exemplis ostendam." I know not, however, whether this appellation was ever extended to any French king besides Louis XIV. Perhaps a more appropriate illustration would be the title Grand Signior, applied to the Emperor

of Turkey, the Great King of more modern times.

xlviii. Gibbon, in the 58th chapter of his history, (vol. xi. p. 20, &c.) enumerates the temporal motives which appear to him to have united with enthusiasm in producing the first crusade: the acquisition of military glory and extensive dominion, the possession of the splendid palaces and boundless wealth of the east, the flavour of the Grecian wines, &c. Compare with this the actual topics of exhortation employed by Casimir, in some of his odes De recuperando Orientis Imperio, for the promotion of a new crusade against the Turks. The poetical disciple of Loyola is scarcely outdone by the sceptical historian. See also the opening of the seventh book of Camoeus' Lusiad.

xlix. The following fragments of translation into Greek verse are

submitted to the candour of the reader.

1. A Sole exoriente, supra Mæoti' paludes, '
Nemo est qui factis me æquiparare queat.

Foigr in African up Co. Tue

Epigr. in African. ap. Cic. Tusc. Disp. v. 17.

.1 μνην ές Μαιητιν, ἀπ' ἡελίου ἀνιόντος, ούδείς ἐσθ', δς ἐμοὶ δύναται κλέος ἰσοφαρίζειν.

2. Cnju' ipse princeps jurisjnraudi fuit,
Quod omnes scitis, solus neglexit fidem:
Furere assumulavit; ne corret, institit.
Quod ni Palamedis perspicax prudentia
Istius percipiet malitiosam audaciam,
Fide sacrata jus perpetuo falleret.

Fragm. ap. Cic. de Off. iii. 26.

Οὖπες γὰρ ὅρκου πςῶτος ἡν ἐπιστάτης, ώς ἴστε πάντες, οἶος αὖτ' ἐψεύσατο, μανικν πιοτείνων πάντα δ', ὡς μὴ ξυμπλέοι, ἐμήο ατ'. εἰ δὲ μή σφε Παλαμήδους νόος κακότρονα τόλμαν εὖρε μηχανώμενον, ἡ μὴν ἐς αἰεὶ τὴν καθιεςωμένην ἔψευσε πίστιν.

3. Oui, je viens dans son temple adorer l'Eternel:
Je viens, selon l'usage antique et solemnel,
Celébrer avec vons la fameuse journée
On sur le Mont Sina la loi nous fut donnée.
Que les temps sont changés! &c. Racine, Athalie, init.

Davies, from a various reading, suggests, "Majoridas usque paludes." Perhaps the passage ought to be read, "Majorida adusque paludes." Claud. de Phæn. Et Pelusiacas productus adusque paludes. One reading of the passage in Cicero is, "adusque Mæotis paludes."

Εύ τοι κάτοιδας είμι γὰς τον ἄφθιτον λιταίσι τέρψων, ἐν δόμοις αὐτοῦ, Θεόν ἡμάρ τε κλεινὸν κεῖν', ὅτ' ἐν Σίνης πτυχαις ὁ Θείος ἡμῖν ἐξεκηρύχθη νόμας, τιμη παλαία κεύσεβεῖ πεςιττελων. Φεῦ τῆς ταχείας κάθεας μεταλλαγης' κ. τ. λ.

Celui qui met un frein à la fureur des flots, Sait aussi des méchans prièter les complots. Soums avec respect à sa volonté sainte, Je craius Dieu, cher Abuer, et n'ai point d'autre crainte.

1b. Act. 1. Sc. 1.

CÆCILIUS METELLUS.

DE L'IMPROVISATION POETIQUE :

Chez les Anciens, et particulièrement chez les Grecs et les Romains.

PAR M. RAOUL-ROCHETTE.

Troisième Partie.

SECTION PREMIERE.

De l'Improvisation chez les Grecs.

J'Al désapprouvé la témérité de quelques assertions de M. Wolf, destituées de tonte autre autorité que de la sienne; et peut-être le zèle qui m'anime pour les vrais intérêts de la critique exigeoit-il de moi cette libre profession de mes sentimens envers ces hardis novateurs, qui, substituant partout leurs idées particulières aux plus graves tomoignages de l'antiquité; n'estimant dans les auteurs que ce qui favorise leurs opinions, et condamiant sans scrupille tout ce qui les contrarie; rejettant comme entièrement inviaisemblable ce qui n'offre pas à leurs yeux tous les caractères rémis de la vraisemblance, veulent soumettre les faits enx-mêmes à l'examen de leur raison, mesurer les degrés de la probabilité d'après ceux de leur intelligence, et rentermer le cercle entier des événemens possibles dans les bornes étroites de leurs connoissances.

Cette méthode, que font profession de suivre tant de philosophes de nos jours, n'est certainement pas la plus philosophique; et quant à moi, je préfère le doute modeste des hommes véritablement éclairés, à l'ignorance présomptueuse des demi-savans. On pourra me taxer de crédulité, parce que j'ai pris tous les moyens d'assurer ma croyance: mais on ne me réduita jamais à chercher la vérité des faits anciens dans les opinions de nos raisonneurs modernes, et à ne reconnoître d'antic autorité sur ces matières que

les décisions arbitraires de leur jugément.

Que mes lecteurs excusent une digression, qui n'étoit sans doute pas déplacée, et qui peut-être ne sera pas mutile. Je reviens encore à M. Wolf; mais ce sera, cette fois, pour me ranger à son avis. Il prétend que non-seulement Homère ne savoit pas écrire, mais encore que l'écriture étoit ignorée de son temps ; et j'avone qu'il est difficile de refuser son assentiment aux preuves qui justifient une opmion, qui n'étoit sous la plume élognente de Rousseau qu'un ingénieux paradoxe, et dont la critique savante de M. Wolf a fait une vérité démontrée. Avant que l'usage des caractères propies à exprimer la pensée fût devenu populaire dans la Grèce, c'étoit à la mémoire seule qu'étoient confiées les œuvres Des hommes, en qui l'exercice avoit fortifié cette faculté naturelle, apprenoient aisément de longs fragmens de poèmes et des poëmes entiers, qu'ils déclamoient ensuite dans les assemblées de la nation; et c'est de cette mamère que les productions poctiques se perpétuoient en passant de bonche en bonche pusqu'aux générations les plus éloignées. Cette prodigiense capacité de la mémoire ne nous surprendra pas saus donte, si nons réfléchissons que, chez les Tartares, peuple étranger à la culture des lettres, on conservoit ainsi par le souvenir seul et par une tradition orale, d'immenses séries de vers qui comprenoient les généalogies de leurs princes et les annales de leur nation depuis un grand nombre de siècles,3 et que les Italiens modernes, même ceux qui par leur naissance ou leur éducation sont le moms familiers avec la lecture des poëtes, possèdent dans leur mémoire et déclament alternativement de vive voix les poemes de l'Arioste et du Tasse, dont ils amusent souvent pendant des journées entières les loisirs de la populace.

Dans la Grèce à peine civilisée, la Conservation des ouvrages des poëtes faisoit une grave et importante occupation, et une espèce de jirofession particulière pour les hommes appelés rhapsodes.

Prolegom. ad Homer. § xviñ. p. 73.

² Œuvres Posthumes, tomaxvi. p. 240, edit. Genev. 1782.

³ Voy. de semblables exemples rapportés dans les Prolégomènes de M. Wolf.

⁴ Voy. le récit que fait Madame de Stael, des amusemens de Vomse (Coriune, \$v. xv. c. 8. tom. iti. p, 76-77.)

Leur art avoit dû prendre naissaure en même temps que le talent des poètes, dont ils étoient les organes immédiats, avoit commencé à buller de quelque éclat. Aussi la profession des rhapsodes paroît-elle remonter à une haute antiquité, quoique leur non, postérieur à Homère, soit d'une époque assez moderne; et M. Wolf, qui, pour étable l'existence ancienne de cet ait, rappelle le titre de rhapsode appliqué à Hésiode, auroit dû ne pas omettre le témoignage plus formel et plus décisif de Platon, qui donne le même ture au poête Phémnis d'Ithaque. Les observations que j'ai faites plus haut, sur la nature et le caractère du talent de ce poète, peuvent s'appliquer à tous ceux du méme temps et de la mênie profession, tels que Chæris, de Corcyre, et Automède, de Mycènes; ct il est, en effet, probable que ces iliapsodes, contemporanis de Phémius, et ceux même du siècle qui, succéda immédiatement à celui-là, étoient la plupart, ainsi que lui, des poètes improvisateurs. L'idée que Platon nous donne de ces ancieus thansodes, confirme entièrement notre conjecture. Pour réassir dans leur art, il ne leur falloit pas moins d'inspiration qu'aux poètes enx-mêmes, ou plutôt, leur art n'étoit qu'une inspiration continuelle. L'enthousiasme qui agitoit les poetes et leur dictoit des chants sublimes, se communiquoit par une impulsion rapide aux rhapsodes qui leur servoient d'interprètes; et c'est-là. sclon Platon, cette chame de personnages tous saisis d'un soufle divin, dont les poètes formoient le prender anneau, et dont les chamons s'éteudoient jusqu'aux derniers spectateurs par l'intermédiaire des rhansodes.

Plus tard, et lorsque les moyens de donner de la publicité aux œuvres du géme furent devenus plus communs, l'art des rhapsodes, en perdant son premier usage, sembla acquérir une extension nouvelle, et se perfectionna d'autant plus, qu'il étoit devenu mains nécessaire. Comme il offroit la ressource de publier les productions poétiques avec plus de promptitude et d'éclat tout à la fois, comme l'effet que produisoieut ces ouvrages étoit plus brillaut et plus rapide, lorsque, communiqués au peuple par l'organe des rhapsodes, accompagnés d'une déclamation animée, et soutenus

^{*} Prolegom ad Humer & xxm. p. 99.

¹ Plato, in Ion. tom. iv. p. 5.34.

^{*} Demetrus Phaler, apud Isac. Tzetz. Prolegom. ad Cassand. Démétrus est le seul auteur, à ma compossance, qui fasse mention de Chæris. Enstathe (ad Odyss. lib. m. p. 1466, lin. 56) parle d'Antomède, et ajonte que ce poête étoit de Mycènes, qui l'avoit composé en vers le récit du combat d'Amphitryon centre les Téléboeus, et de la querelle de Cythéron et d'Hélicon. Il dit encore que selon la conjecture de quelques critiques, get Automède étoit le même poète qu'Hamère avoit désigné comme gardien de Clytennestie.

⁵ Plato, loc. laud., ioti yag touto tixva mir oux or napá ou, ... bia di curamis à or

du charme de la mélodie, ils échappoient ainsi aux lenteurs inséparables de l'écriture et au jugement sévère du cabinet; les poètes préférèrent toujours une voie si naturelle et si commode de jouir du fruit de leurs travaux : aussi les vit-on fréquemment réunir la double qualité d'auteur et de thapsode; et les exemples de Xénophane, de Tespandre, de Chixthus, et de mille autres, justifient suffisamment l'assertion de M. Wolf, que presque tous les rhapsodes de cette espèce furent en même temps des poètes recommandables.

Il nous reste peu de documens sur la manière dont ces iliapsodes déclamoient leurs propres poèsies et celles des autres auteurs. qui est certain, c'est qu'ils les débitoient de mémoire, et en s'accompagnant sur des instrumens.5 L'enthousiasme qui s'emparoit d'eux, dans un débit doublement animé par l'harmonie poëtique et par le rhythme musical, devoit donner à cette déclamation rapide l'air d'une composition improvisée; et il est probable que, pénétiés eux-mêmes de tous les sentimens qu'ils exprimoient, échauffés par la peinture des passions dont ils étoient les organes, et saisis, comme nous les représente Platon, du délure poëtique qui avoit inspiné leur auteur, et qui transportoit leur anditoire, ces ihapsodes ne e bornoient pas tonjours au rôle passif d'interprêtes. Ici, la vrusemblance seule doit suffire, au défaut des temoignages qui nons manquent; et l'on ne pourroit, sans en blesser toutes les règles, supposer que ces homines, doués pour la plupant de la faculté de produite cux-mêmes des chants poétiques, familiarises par une longue habitude avec la langue des vers, demeurassent si scrupuleusement fidèles à leur mémoire, lorsqu'il leur étoit si facile de s'abandonner à l'impulsion de leur génie; lorsqu'en debitant une œuvre étrangère, et, à plus forte raison, en récitant leurs propies ouvrages, ils trouvoient de si fréquentes occasions, d'expliquer ce qui étoit obscur, de développer ce qui n'étoit qu'indiqué dans la composition originale, de réunir plusieurs morceaux sépares en les liant par des transitions imprévues, de captiver enfin la bienveillauce de leurs auditeurs par quelques allusions flatteuses.6

Plutarch, de Musica, § ni.

³ Scholiast. Pindar. ad Nem. ii. v. 2.

⁴ Prolegomen, ad Homer, § xxiii, p. 99.

On a beaucoup écrit sur l'art des Rhapsodes; mais on n'a encore éclaire que bien peu de Choses. Les critiques les plus modernes qui ont traité cette matière, M. Drésig (in Comment. Lyps. 1734) et M. Chilies (History of Greece, vol. i. c. 6.) laisseut beaucoup à désirer. M. Wolf, qui n'a pas moins d'érudition, et qui a plus de aagacité, me paroit le plus satisfaisant (voy. les Prolégomènes, passim); et cependant, il s'en faut bien qu'il dissipe tontes les obscurités.

⁶ Je n'al fait que traduire ici les propres expressions de M. Wolf et développer sa pensée (Prolegomen. § xxv. ρ. 105.)

C'est aux tréquentes altérations commises par les rhapsodes dans la chaleur d'un débit rapide, que les critiques auciens attribuoient les amombrables lanantes des poemes d'Homère: telle est indubitablement la source de toutes les uiterpolations qu'on y remarqua long-temps avant l'étabhssement de l'école d'Alexandrie, et qui firent douter dès-lors, comme quelques personnes doutent encore aujourd'hui, si le texte d'Homère, qui nons est parvenu. est bien le texte original de ce poëte. Il est certain que toute l'école du rhapsode Cinxlins, qui exerçoit avec éclat son art dans la Lyrxe Olympiade, fut accusée d'avoir dénaturé les poëmes d'Homère de plusieurs manières, et, entre autres, en y insérant de nombreuses suites de vers qui ne lui apparteifment pas; et l'on ne samont mer que ces altérations, même indépendantes ile la volonté du thapsode, n'aient dû se reproduire encore plus fréquemment à l'égard des ouvrages dont le mérite moins généralement reconnu, et la réputation moins solidement établie, permettoient au rhapsode de se donner plus de carrière et de suivre plus librement l'inspiration de son génie.

Sanvent aussi les rhapsodes se hornoient à fane précéder leurs déclamations, d'exordes préparatoires on préludes, dont le sujet étoit relatif soit aux poèmes qu'ils alloient réciter, soit aux circonstances particulières, dans lesquelles ils se trouvoient. Ces exordes n'étiment encore, et le plus ordinairement, que de comites invocations aux Dieux, on les nommon, proèmes, et ils étoient tautôt écrits, tantôt improvisés, ainsi que le fait conjecturer la nature même de ces poèsies, et que semble l'indiquer le témoignage d'un ancien. Tespandre se distingua dans ce genre de composition, et il y employa le veis héroique, le plus sévère et le plus difficile de tous; ile qui n'empêcha pas, sans doute, que des rhapsodes moins habiles ne se servissent quelquetois d'une mesme

¹ Telle étoit l'opinion des critiques d'Alexandrie (Vid. apud Joseph. contr. Apion. lib. i. c. 2, pt. 139.)

² Plutarch, de Music, \$ vi. Le dernier éditeur de Plutarque, M. Hutten, pense (tom. xiv. p. 215) avec M. Wyttenbach que les mots α, βούλννται ne tout iet aucun sens, et qu'ils doivent être reportes dans la pluase superieure. M. Binette (Académ. des Inscript. tom. x. p. 234) ng les a pas tradoits, sans deute parce qu'il ne les comprenoit pas. Pour moi, je crois pouvoi défendre la leçon du teste, avec l'interprétation que jg lui donne.

³ Platarch, iladem, § 1v. Le mot de σρωμα indique le premier usage qu'on fit de ces poemes. Le scholiaste de Thurydide le fait dériver (ad hb. m. c. 101.) de αμα chant, étymologie infimment plus probable que celle du scholiaste d'Eschyle (ad Septem advers. Theb. v. 1.), qui la tire de αμα ronte, parce que, dit il, on chantini ces vers sur les grands chemins? Dans la suste, le mot πρωμα servit à désigner des hymnes entiers (Pindar. Nen, ir. v. 3.), tels que ceux que l'antiquité elle-même attribuoit à Homère (Tllucydid. fib. m. c. 104), et l'opinion de quelques critiques, que ces hymnes furent composés des proœmes débités par les rhapsodes, peut n'être pas dénnce de fondement (cf. Wolf, Prolegomes. § xxv. 1. 107; Micscherl. 2d Hymn. ad Cerei. p. 101; Groddeck, Comment. de Hymn

moins rigonreuse. Comment, en effet, dans le cours d'une improvisation rapide, se seroient-ils assujétis à la régularité pénible du même mètre, lorsque des compositions étudiées offroient l'exemple commode du mélange de tous les mêtres? Un grammainen avoit remarqué que dans le Murgitès, poëme attribué à Homère, les vers iambiques étoient jetés pêle-mêle parmi les héroiques, sans ordre et sans symmétrie. Un autre critique reprochoit à Homère d'avoir pris de semblables hecnees et de plus graves encore, non-sculement dans ce Murgitès, poëme du genre badin, mais même dans des compositions d'un genre plus sévère et d'un caractère plus élevé, telles que l'Iliade et l'Odyssée. Athénée observe que les fréquentes irrégularités qui se rencontrent dans la versification des poësies d'Homère, étoient favorables au chant; et l'on ne peut douter que plusieurs poètes, qui trouvoient plus facile, sous ce prétexte, d'imiter ses défauts, que d'atteindre à ses beautés, n'aient pris depuis une heence qu'un pareil exemple avoit consacrée. Aristote citet d'un certain Chéræmon un ouvrage, qu'il appelle une rhapsodie composée de toutes sortes de mêtres. De pareilles fautes, à moins qu'elles ne proviennent de la bizarrerie d'un système particulier, ne sannoient se concilier avec le travail d'une composition réfléchie; les ouvrages où elles se trouvoient, devroient donc par cela même être plutôt considérés comme les fruits de l'inspiration, que comme ceux de l'étude, et l'on sent quelle facilité pouvoit donner aux improvisateurs cette permission d'employer indistinctement tous les mètres, comme ils jouissoient ne la faculté de composer leur diction de tous les dialectes.

Tant que les poëtes [et les rhapsodes] ignoièrent on négligèrent l'usage de l'écriture, et que, dans les récitations publiques qui se faisoient de leurs productions communes, on ne sépara point la poësie de la musique, il est probable que, pour remplir les diverses obligations qui leur étoient prescrites, et pour varier eux-mêmes leurs succès, ils appelèrent souvent l'inspiration au défaut de la mémoire. Les anciens ne comment long-temps que le mot aoidos, chantre, pour désigner un poète; et cette expression, dont l'isage

relig. Homer. p. 21). Ces proœmes étoient encore appelés προύλια, on προσφαί, selon qu'ils étoient destinés à être chaûtés sur la flute, on a précéder des nomes (Burette, Académ des Inscript. tom. x. p. 235). Dans ce dermer das, il paroit qu'on doit les assimiler aux ἐπαρχιτα qui formoiené, selon Pollux, (Onomast liß. iv. c. iv. § 65) la première des sept parties du nome.

paroît avoir été bien postérieur aux siècles d'Homère et d'Hésiode, renferme en elle-même l'idée du travail et de l'étude, qui étoit étrangère aux prenners chantres de la Grèce, et incompatible avec leur profession. Aussi, ne ferai-je point de difficulté de ranger dans cette classe d'improvisateurs, la plupait des anciens poètes prédécesseurs ou contemporains d'Homère. J'ai déjà eu occasion de nommer plusieurs de ces poètes, et je vais en indiquer quelques anties, sur lesquels pous aurous encore à regretter que l'antiquité, qui n'avoit recuelli d'autre monument de leur existence littéraire que leurs noms et les titres de leurs ouvrages, ne nous

ait transmis que des détails fabuleux et incomplets.

La période qui précéda le siège de Troie, vit fleurir Amphion, Linus, Anthès, Musée, Piérus, Philammon, Thamyris, Orphée: la plupart de ces poètes ne sont guère connus aujourd'hui que par des traditions mythologiques. Amphion fut l'inventeur d'un genre de poésies qui se chantoient sur la cithare: on citoit, dans l'antiquité, des hymnes de sa composition, et les prodiges de sa lyre ont été célébrés dans tous les temps.5 Linus avoit composé des chants plaintifs, et un poëme sur la création du monde, dont le premier vers est cité par un ancien, et dont des fragmens plus étendus sont rapportés par un autre:7 ces vers n'avoient pu être conservés que par la tradition, pursque, selon des témorgnages formels,3 Linus n'avoit rien écrit. Nous ne gonnoissous même pas d'une manière aussi imparfaite les hymnes d'Anthès, et le poème de Piérus sur les Muses. La même obscurité couvre les productions de l'antique Musée, dont l'une avoit pour objet les traitemens des maladies; 10 sujet en apparence peu favorable à la poesie, mais

¹ Sur l'usage vulgatre du mot poete, voy. Platon (Sympos. p. 205, c. ed. Stephan. cf. Wolf. Prolegom. § xii. p. 12.)

² Cétoit aussi l'opimon de l'Abbe Arnaud (Œuvres complètes, tom. ú. p. 100) et de son ami, M. Suard (Mélanges de Littérature, tum. m.) "Il ne nous si foit pas difficile de demontrer qu'en effet les anciens poetes de la Gièce étoient tous improvisateurs." Je veux bien courre que cela n'étoit pas difficile à démontrer. Mais, en tout cas, il ctoit encore moins difficile de le dire. Quant à moi, je nose pas me flatter d'avoir démontré. J'ai donné quelques preuves, j'ai foirmi plusieurs probabilités. Tout cela sufficia pent-etre pour rendre mon sentiment viaisemblable, mais non pas pour faire partager ma conviction à tous mes lecteurs.

phat, ont à peine échappé à l'oubli dont leurs productions ont été frappées. Mais cet âge produisit Hestode, dont on répète encore anjourd'hui les chants harmomeux, et Homere, qui fut toujours sans rivaux, comme il avoit été sans modèles. Quelques femmes, dans le cours de ces deux périodes, essavèrent aussi d'associer leurs noms à la gloire de ces chantres célèbres. Les antiques Sibylles Daphné et Phémonoé exprimèrent dignement en vers les volontés des Dieux dont elles étoient les organes; une Corinne, de Thespic, que l'identité de nom et de patrie ne sauroit faire confondre avec la rivale de Pindare, consacra ses taleus au même usage; et l'on cite encore une Aristomaque, d'Erythres, dont les poësies furent comomées aux jeux Isthmiques.

Les poëmes qui nous sont parvenus sous le nom d'HESIODE, ne paroissent être ni de la même main, ni de la même époque. Les Œuvics et les Jours offrent seuls des caractères d'antiquité trop frappans et trop nombreux, pour que l'authenticité en puisse être révoquée en doute. La Théogonie a certainement souffert de graves altérations, et le Bouclier d'Hercule, amsi que la plupart des fragmens qui nous restent des autres poésies d'Hésiode, attestent, par leur diction même, la différence de l'âge et du géme de leur auteur. L'idée qu'Hésiode cherche à nous donner de son talent répond bien à celle que nous nous sommes formée du talent des autres poètes de la même pénode : ce soût les muses elles-mêmes qui dectent ses vers ; les chants émanés de sa bouche ne sont point le fruit de l'étude, mais l'effet d'une inspiration spontanée ; c'est un délire prophétique qui l'anime et qui dévoile à ses yeux le passé et l'avenir.

Que n'a-t-on pas dit d'Homere, et quel éloge reste-t-il encore à fanc de ses poësies? La glone de leur auteur, loin de vieillir en traversant tant de siècles, a semblé buller d'un nouvel éclat à chaque époque nouvelle; et l'admiration, ce sentiment qui se fatigue si aisément et si vîte, a paru pour lui seul inépuisable dans ses expressions, comme immortelle dans sa durée. La destinée

I e me plats à rappeler ici le magnifique portrait que l'Abbe Barthel-my a fait d'Homère, dans son Introduction au Voyage du Jenne Anacharsis. Je n'at vu nulle part le caractère du géme de ce grand poete exprimé avec plus de vérite et

de cet homme extraordinaire eut quelque chose de semblable à celle des Dieux qu'il consacra dans ses vers. Une obscurité mystérieuse couvrit leur naissance et la sienne aux yeux mêmes de ceux qui leur dressoient des autels et qui leur offroient des hommages. La Grèce recueillit les fruits de sou génie, sans pouvoir jamais retrouver les titres de son existence. On ne lui connoissoit point de famille; il ne laissa point de postérité. Son tombeau même fut, comme sa patrie, un sujet de disputes qui ne sont pas encore éteintes,2 et, s'il n'eût pas chauté, on ignoreroit qu'il ent Tant de nuages répaudus sur une vie qui dut être si brillante, ont fait douter long-temps de l'authenticité des poësies d'Homère, ainsi que de l'existence de leur auteur. Mais, si je ne puis partager la première de ces opinions, il m'est encore plus impossible d'approuver la seconde. Des traditions confuses ou mensongères out pu obscurcir la vérité, sans la detrnire; et, bien qu'il faille nous résoudre à ignorer les principales circonstances de la vie d'Homère, je ne crois pas que nons puissions raisonnablement la révoquer en doute, in que la juste défiance que nous inspirent ces traditions contradictories, doive s'étendre jusque sur le caractère de taleut qu'elles supposent ou qu'elles attribuent à l'auteur de l'Iliade.

L'idée que nous y puisons d'Homère, et qui s'accorde avec celle qu'il nous donne lui-même de l'hémins et de Démodocus, est celle d'un poète improvisateur. L'un des plus doctes commentateurs, qui avoient pris à tâche de recueillir toutes les notions éparses concernant ce grand homme, affirme, qu'ilomère respiront en quelque sorte les vers, tant le language poétique lui étoit devenu familier, et qu'il s'exprimoit en vers avec plus de facilité et de grâce que personne ne pouvoit le faire en prose. Il entre sans donte de l'exagération dans cet éloge; mais il faut bien que la vérité en ait tourni la matière; le mensonge ent été trop grossier, pour qu'aucun homme de seus ent voulu le croire ou

d'élégance, pas même dans le livie, estimable d'ailleurs, que l'Anglois Wood a composé exprés sur ce sujet (An Essay on the original Genus of Hemer, 1775).

C'est à tort, en effet, qu'on a regardé les Homérnies de Chios, dont il est fait si fréquenment mention chez les auteurs auciens (Plato, in Lone : Isocral, in Helen. Encom. § 28, Strabo, Geograph. In No. 11, p. 645, et alu), comme des descendans de ce poete. C'étoit une école de rhapsodes qui prenoient pour texte habituel de leurs déclamations, des morceaux emprenites d'Homère, telle est l'opinion tres-vraisemblable de M. Wolf (Prolégomen. § xxiii. p. 98, not. 65), qui ne preud même pas la peine de réfuter celle de Leo Allatius (de Patria Homer. c. xiii), et je conviens avec lui que les passages rapportés dans Harpocration (v. 'Oμπρίδαι) ne la détruisent nullement : elle est d'ailleurs partagée, et, par conséquent confirmée, par M. Coray (ad Isocrat, tom. 11, p. 336—337.)

² Voy, surtout le trailé précédemment cité de l'Allacci (apud Antiq. Greic. tom, x. p. 1719-1852).

³ Enstath. in Prolegomen. Homeric.: Καὶ ὅτι ἔπνα τὰ ἔπχ Όμηςος, καὶ οὕτως ιἔχι της περείργου καὶ ἐμμιλού; μούσης, ὡς ιὐδὶ τοὺ ἐν ὡπλον ητι πεζολογιιν ἔπεροι.

le répéter, et l'on ne ment pas ordinairement en pure perte. D'ailleurs, la Vie d'Homère attribuée à Hérodote pronve, par une foule de faits, que cette faculté merveilleuse fut réellement possédée par Homère; et l'on n'invente pas des faits de cette nature, uniquement pour sontenir une opinion bizaire. Je sais que cette l'ie d'Homère a paru supposée à de savais critiques, quoiqu'elle ait en assez généralement cours dans l'autiquité sons le nom d'Hérodote; mais je peuse, et en cela, du moins, mon opinion ne manque pas d'autorité, que c'est s'abuser grossièrement que de voir dans cet onvrage la production d'un siècle barbare. J'y reconnois, au contraire, le goût et l'esprit de la same antiquité; et je n'hésite point à regarder cette vie, de quelque main qu'elle ait été écrite, comme le recneil le plus ancien des traditions les plus fidèles concernant la personne et les ouvrages d'Homère.

Or, de quelle mamère y est-il représenté? Nons l'y voyons sans cesse errant de ville en ville, et débitant partont des vers analognes aux circonstances qui les lui inspiroient. On me permettra sans doute de rapporter ici quelques-unes de ces pièces, qu'on pomiroit nommer fugitives avec beancomp plus de vérité, que la plupait de nos poèsies modernes. Outre qu'elles serviont à prouver l'improvisation qui les produisit, elles portent en elles-mêmes un degré d'intérêt, qui dont en rendre la lecture agréable à tons les amateurs de l'ammunté. Je me serviai de la traduction de M. Larcher, qui n'est peut-être pas très-poètique, mais dont la naive fidélité me paroît avoit assez bien conservé le caractère de l'original.

Dans un sejour qu'Homère avoit fait à Cumes, il y avoit, en plusieurs occasions, captivé les suffrages des citoyens par la récitation de ses poëmes. Enhardi par les éloges donnés à son géme, et flatté de l'accueil dont sa personne étoit l'objet, il proposa aux magistrats de consacrer ses talens à l'illustration de leur ville, pourvu qu'ils voulussent le nomir aux frais du trésor public. Cette demande, quoique fortement appuyée par les principaux citoyeus, fut cepeudant rejettée d'après les observations de l'Archonte; et, larsqu'on vint lui apprendre le résultat fâcheux d'une

^{&#}x27; Tatian. advers. Greec. c. 18, Smdas, v. "Ομαηρος, Enstath. in Prolegoraen. Homeric. et alu.

² Voy, les auteurs cités plus hant. Le docte Fabricius a cru ne devoir prendre aucun parti dans cette question littéraire. M. le Président Boohier, auteur des savantes Recherches et Dissertations sur Hérodote, a été moins timide, et son seimment, que je suis tenté de partager, malgré l'auterité de Wellering, est que cette vie d'Homere est véritablement d'Herodote, mais un ouvrage de sa jennesse, et une espèce d'essai.

Voy. ce que dit à ce sujet M. Larcher (tom. vi. not. 25, p. 199-200 de sa nouv. édit. de la Tradaction Françoise d'Herodote.)

délibération dont il devoit se promettre une plus heureuse issue, Homère, saisu d'indignation et de douleur, exprima ses sentimens dans des vers prononcés au moment même:

" A quelle destmée fatale le père Jupiter a-t-il permis que je fusse en proie, moi qui ai été nourri délicatement sur les genoux d'une mère respectable, dans le temps que les peuples du Phricium, habiles à donnter les chevaux et ne respirant que la guerre, élevèrent, sur les bords de la mer par l'ordre du Maître des Dieux, la ville Cotienue, la magnifique Smyrne, que traversent les eaux sacrées du Melès! Les doctes filles de Inpiter vouloient, en partant de ces lieux, immortaliser par mes vers la ville illustre de Chines. Mais, souids à ma voix, ses habitans insensés ont dédaigné mes chants harmomenx. Non, non, il n'en sera pas autsi : quiconque, dans sa fohe, anra accumulé les outrages sur ma tête munocente, ne l'ama pas fait impunément. Je supporterai conrageusement le sort augnel le Dieu m'a condamné dès ma naissance. C'en est fait; je ne demeurerai plus à Cumes; mes pieds brûlent d'en sortir, et mon grand cœur me presse de me rendre dans une terre étrangère."

Dans son voyage de Phocée à Chios, Homère obtint des nautonniers, qui faisoient voile pour Erythres, de monter sur leur vaisseau; et à peme y avoit-il pris place, que, pour leur en témoigner sa recommoissance, il proféra de suite cette invocation à Neptime:³

"Soyez favorable à mes væns, prissant Neptune, qui réguez sur les vastes campagnes d'Hénce; envoyez-nous un vent favorable; accordez à ces nautonniers compagnons de mon voyage, et an maître du vaisseau qui me porte, un heureux retour dans lem patrie. Puissé-je aborder bientôt au pied du sourcilleux Minias! puissé-je y rencontrer des hommes justes et pieux, et me venger de celui qui, par ses trahisous, a irrité Jupiter hospitalier, et qui, m'admettant à sa table, a violé en ma personne l'hospitalité."

Pendant le cours de la même traversée, Homère n'éprouva pas toujours la même bienveillance de la part des hommes de cette profession. Des pêchems, qui appareilloient pour l'île de Chios, refusérent, malgré ses instantes supplications, de le prendre sur leur bord; et le Poèce les mensea d'une navigation malhemense, dans ces vers prophétiques qui lu fuient inspirés par la colère:

"Nautonniers, qui traversez ces mers, vans qui, toujours en butte aux traits du malheur, et, tels que les timides plongeous,

¹ Vit. Homer. \ xiv.

² Ibidem, § xui.

[📜] Ibidem, § xıx

tirez de cet élément perfide une subsistance pénible, respectez l'auguste Jupiter, protecteur et vengenr des droits de l'hospitalité. Sa colère est terrible; craignez qu'elle n'éclate sur la tête de ceux qui l'offensent."

Homère, toujours errant et malheureux, avait trouvé un asile dans la cabane d'un pauvre pasteur. Tandis qu'il y réparoit ses forces par un repas frugal, les chiens, fidèles gardiens du troupeau, ne cessoient d'aboyer après l'étranger, lorsque celui-ci adressa au berger ces vers, dont la diction est aussi simple que le sujet, et qui ne contenoient qu'un conseil relatif à la circonstance:

"Glaucus, pasteur de ce troupeau, mettez-vous dans l'esprit ce que je vais vous dire. Donnez à manger à vos chiens, sur le seud de votre cabane. Ce conseil vous sera avantageux, ils entendront plus facilement l'approche d'un homme ou celle d'une bête qui dingera sa marche vers le parc où est renfermé votre troupeau."

Une autre fois, des potiers de terre, qui commoissoient son talent pour la poësie, l'invitèrent à entrer chez eux et à leur réciter des vers, s'engageant à lin donner, pour prix de cette complaisance, quelques uns de leurs vases, ou tout autre objet qui lui seroit plus agréable. Il n'en fallut pas davantage pour exeiter son génie, et sur le champ il leur adres a une pièce de vers, la plus longue de toutes celles du même gême qui nous sont parvennes sous son nom, et dont toutes les expressions aussi bien que toutes les idées attestent qu'elle fut pareillement improvisée:²

chanterai ces veis. Accourez à ma vois, Pallas, protégez ce fonmean. Que tous les cotyles, que toutes les corbeilles se couvrent d'un bean noir et soient cuits à propos. Qu'ils rapportent à leur maître un prix considérable. Qu'il s'en vende beauçoup au marché, beancoup dans les rues. Que le profit en soit grand. Puissiez-vous, Déesse, m'accorder de croître ainsi en sagesse!—mais, si, sans pudeur, vous cherchez à me tromper, j'invoque contre votre fomneau toutes les pestes qui portent à votre art les comps les plus finestes. Que le fonrueau, que la maison soient la proie des flammes; que, dans le trouble occasionné par l'incendie, un n'entende que les gémissemens et les cris plaintifs des potiers. Tel le

Vit. Homei. § xxii.

² Vit. Homer. § xxxii. Cette pièce étoit counue dans l'antiquité sons le titre du Fourneur, κάμινος, cependant, elle est citée dans Poliux (Onomast. lib. x. segment. 85, p. 1255) sons le nom des Potiers, κεραμίζε. Voy. à ce sujet la note de M. Hemsterhins.

NO. XXXII Cl. Jl. VOL. XVI. 2 A

frémissement du cheval; tel soit celui du fournean, lorsque les vases voleront en éclats. Fille du Soleil, Circé, célèbre par vos enchantemens, répandez vos poisons sur les potiers et sur leurs ouvrages. Et vous aussi, Chiron, amenez avec vous grand nombre de Centaures, et cenx qui ont échappé aux comps d'Hercule, et ceux qui ont péri en combattant contre lui. Puissent-ils briser tous ces ouvrages! puisse le fomneau tomber sous leurs coups, et les potiers, en se lamentant, être témoins de cet affreux spectacle! Je me réjouirai cependant de leur calamité. Quiconque se baissera pour contempler de plus près cet incendie, qu'il ait le visage consumé par les flammes, afin que tout le monde apprenne à ne point commettre d'injustice."

Enfin, car il seroit trop long de rapporter tous les morceaux du même genre que le même auteur attribue à Homère, et qui furent prononcés dans des circonstances semblables, ce poëte se tronvant à Samos, fut invité à un banquet public donné pour la fête nationale des Apaturies. Arrivé au lieu du festin, il s'arrêta sur le seuil de la porte, et, tandis qu'on allumoit le feu dans la salle, il prononça de suite ces vers:

"Un homme s'enorgueillit de ses enfans; une ville de ses remparts; une empagne de ses chevanx; la mer des vaisseaux qui la conveent. Les richesses sont l'ornement d'une maison; de respectables magistrats, assis sur un tribunal, offrent un tableau majestueux. Mais le plus agréable spectacle, à mon avis, est celui du feu qui brille dans une maison, un jour d'hyver, lorsque le fils de Şaturne répand sur la terre la neige avec les frimats."

Tous ces exemples me paroissent démontrer incontestablement, surtout après les témoignages précédemment allégués, qu'Homère possédoit au plus haut degré la faculté d'improviser, et que cette faculté étoit autant dans les mœurs générales de son siècle, que dans la nature particulière de son génie. Mais je me garderai bien de conclure de là que les pocines qui nous sont restés sous son nom, et ceux même d'une étendue moins considérable que l'autiquité lui attribue, comme la Petite Iliade, la

^{*} Entre autres, & xx.

^{&#}x27;Vit. Homer. § xxxi. Le même impromptu est cussi rapporté par l'auteur anonyme du Combat portique entre Homere et Hésiode à apud Barnes. Prolegomen. ad Homer. p. 28.), qui fait quelques légels changemens au texte de ces vers et aux circonstances de ce récit. J'observe que, dans ce dernier passage, l'auteur emploie le mot σχιδιάζων, qui signifie proprement improviser.

Phocvide, l'expédition d'Amphiaraus, les Cercopes, les Epicichlides,3 et quelques autres peut-être dont on a négligé de nous transmettre les titres; que ces poemes, dis-je, aient été produits par l'improvisation. C'est faute d'avoir fait une distinction si importante, que l'Abbé Arnaud s'est vu conduit à cette assertion, au moins fort hasardée,4 que les vers d'Homère, ces vers qu'ont admiré et qu'admireront tous les âges, Homère les enfantoit sur le champ, sans peiue, sans efforts, comme une source répand ses ondes. Cette image est ingénieuse; mais, appliquée à toutes les productions d'Homère, elle manque certainement de justesse. L'art qui règne dans la composition de l'Ihade et de l'Odyssée. atteste une étude trop profonde et trop réfléchie; toutes les parties en sont trop bien hées au sujet principal, et trop exactement proportionnées entre elles; la diction même, comme le tissu de la fable, offre une suite trop uniforme des plus savantes combinaisons, pom que nons puissions y reconnoître l'œnvre téméraire de plusieurs inspirations instantances. Ce n'est qu'après de longnes méditations, qu'Homère a pu produire ces deux grands monumens de l'esprit human, que tous les siècles ont admné; le temps ne les a sans doute respectés, que parce qu'ils furent en partie son ouvrage, et c'est, à mon avis, la plus forte de toutes les absurdités littéraires qui nous sont venues d'Allemagne, que de regarder comme un recueil fait au hazard de divers poëmes écrits par différens auteurs, ces compositions immortelles qu'un seul homme put créer, pnisque l'antiquité n'en connut jamais deux qui sussent capables de les produire. Mais cette perpétuelle application d'Homère, jointe au génie le plus heureux, lui procura sans doute la faculté d'exprimer en vers, au gré des circonstances, les sentimens et les pensées qu'elles devoient naturellement lui suggérer. Son imagination vive et féconde put s'exercer sans préparation et sans effort sur des sujets, pour lesquels elle eût toujours été trop tardive et par conséquent superflue. Trop riche des trésors de sa veine, pour n'en'être pas un peu prodigue, il put se livier aux saillies de l'inspiration, sans craindre d'en tarir la source, et ces jeux d'une muse facile, qui s'enrichit de ses pertes et s'embellit de ses négligences, ajoutoient à la réputation du poète, sans dimmucr de son mérite.

Voy. une note do M. Larcher, tom. vi. p. 191-192.

ANSWER

To the "Observations on Mr. ROBERTS's Reply to Sir W. DRUMMOND, in Classical Journal, Nos.

Though I thought I had given no occasion for any attack from your correspondent F. R. S., it appears from No. XXVIII. of your Journal that I have been mistaken; and considering the singularity that his communications on the subject exhibit, I cannot

be much surprised at it.

With something more than warmth in his own expressions, and less than candour, he appears to expect a candid confession in my cooler judgment from me. He makes researches for canons of perspicuity in writings in which no intimation was given that such canons, if any such there be, were to be found. Knowing, as he says, how to treat the memory of Mr. Bryant with a gratefully cherished respect, he thinks proper to make it a part of his observations, that Mr. Bryant could trifle. I am sure however he did not trifle with the truth.

In his attack on Sir W. D. your correspondent F. R. S. very magnumously presented the abridgment, to which he added some remarks which provoked a reply. Towards that reply, for three years he observes a most respectful silence—makes no attempt to vindicate either the Scriptures, Mr. Bryant, or himself. At last, when an effort had been made to defend the cause, which F. R. S. had deserted, he attacks the one who did make the effort, and censures him for assuming what he found in the reply, as to two circumstances of very little consequence to the principal subject, as correct, which F. R. S. had so long left uncontradicted. It it was at all necessary to contradict them, was it not so in the first instance; or was it necessary to see the answer from another before he could defend bunself even so far? However this may be, had there not been that neglect on his part, he would have had no reason for the complaint he has made in terms not the most gracious, and in a mode not very consistent in itself

Translating my expressions and sentiments into others more convenient for attributing a bad intention, and exaggerating the cause of complaint, he says, "I could not help remarking (in this, indeed, the writer has himself anticipated me) that he has been guilty of the very offence which he attributes to

his adversary." This is not my language, nor are the ideas mine. I attributed to the haste only, with which the reply evidently appeared to be written, that which I presumed the consulting the original work of Mr. Bryant, and at more lessure, might have been obviated; and I objected to the authority of an abridgment, particularly to one so described, because it is of the 'very nature of an abridgment to omit much, and it may therefore omit what may be of consequence in a discussion, though not otherwise. A doubt therefore must necessarily arise as to an abridgment's being sufficient authority in a discussion. As to any thing in the nature of a simple extract or reference, the same necessity for a doubt does not exist; on the contrary, a general appearance of farmess precludes suspicion, and the more decisively, if a mistake can be, and is not rectified by him whom it most concerns to do it. The cases therefore are, I apprehend, so far from being the same, that they are very different; nor did l'anticipate any farther than saying I had not read the abridgment. My attention was limited to what was before me; nor did I think it necessary to extend it, for I had no doubt as to its fairness, and saw no reason to doubt it.

Again, it is alleged that, as to the usinine part of the subject, "with a little trouble " I "might have gone on assured grounds." I would here beg leave to ask whether, if any trouble was to be taken, F. R. S. was not the most proper person to take it in his own defence, having had time enough to do so. But it seems that, for want of taking this trouble, I have "been constrained to argue hypothetically." Why then, if he was not to blame, how does it affect him? Surely his withers are minimum, by whatever I may have said, arguing abstractedly. Yet, when he objects to my arguing hypothetically, is it very consistent to allow himself to found a charge of perverseness on presumed ideas of his own? It does not at least come well from him who made the objection, to say thus; "With the means presumptively quite within his reach-(for, as a reader of the Classical Journal, he has probably access to all its Numbers) he has disdamed, or neglected to turn to No. XII.—and has thus been constrained to argue hypothetically and conjecturally where he might perhaps, with a little trouble, have gone upon assured ground." Here we have presumptively, probably and perhaps convoked and lending their aid to form, an accusation; but as their aid may be called in on either part, it may also be in candour said, per contra, that presumptively Mr. R. had not the means within his reach, or he would have made such use of them as might not have been disserviceable to his purpose. -Probably, as he did not make that use of them, he had not then access to all the Numbers of the Classical Journal. Perhaps

therefore there was neither neglect nor disdain in the affair. With the three last probabilities, I may add, F. R. S. would himself have really "gone on assured ground;" and I now hope to make it apparent that the motive of perverseness, attributed to me, is the very reverse of that which ought to have been so attributed.

In the expectation that F. R. S. would, as it was incumbent on him to do, reply to Sir W. D., for the first year I did not write a line, to the best of my recollection, on the subject, as I thought it due to F. R. S. not to anticipate him. In the second year I did write on the subject; but, from the same motive, waited till the third was at its close, when I sent my reply (which I might have done the year before) for the insertion with which you honored it, for then I thought it in vain to expect any reply from F. R. S. to Sir W. D. Ilad I seen the abridgment, I should have had no expectation of the kind. The first Number of your Journal that I took in was the 14th. Its merit has induced me to continue it. I have, however, as F. R. S. had laid so much stress on the 12th Number, procured it, and in my turn will only observe, that when he gives Hebrew words in his communications to the public, he would do well to avail himself of the assistance of one who understands the Hebrew lauguage: he might then go on assured grounds as to it with little trouble. That he has given the words of Mr. Bryant as to Petra correctly I should have some pleasure in acknowledging, had the appeal been unaccompanied by a groundless and unjust reflection. I call it both; for I can sincerely affirm that, in whatsoever I have offered to the public, I have in no respect asserted what I did not, when I wrote, believe to be correct and well founded: neither have I been unwilling to correct an error, if I perceived it; or spared myself in any respect, where any means, in my power to attain, seemed necessary in order to ascertain the truth. In the present instance the silence of your correspondent was the very motive to my belief that he could not contradict any part of what was urged against him. To a liberal mind it would be more congenial to presume that a misapprehension might be accidental, unless it could be proved otherwise. But this could hardly be expected, when your correspondent's wrath does not spare even Mr. Bryant, who was not to blame if the abridgment did not produce the effect expected. I will only suggest to him that very good advice was given by the Wise Man, who has said, " Of a friend become not an enemy."

Oswestry, Nov. 1817.

* 'ΑΒΡΟΠΟΤΣ, * 'ΑΚΡΟΠΟΤΣ, * 'ΕΛΛΦΡΟΠΟΤΣ. Nov. Thes. Gr. L. Fasc. n. p. 43. n. 1. et ni. p. 50. a. "In Epigr. άδ. DXXI. * 1εσβίδες, άβροπόδων βήμαθ' έλισσόμεναι Brunckio et Jacobsio vulgata lectio satis ridet, άβροπόδων scilicet dicto ex eleganti poetarim usu pro άβρων ποδων, cum Schafero et Schneidero unice probanda videatur correctio, άβρὰ πεδῶν. Ατ άβροπόδων satis tuetur hic Pausanize locus, qui legitur m L. ii. c. 4. Tò ĉè άγαλμα τοῦτο ξόανόν ἐστι, πρόσωπόν τε καὶ χειρες καὶ ἀκρόποδές εἰσι λευχοῦ λίθου. Si chim ἀκρόποδες Grace dici potest pro ἄκροι πόδες, cur non Epigrammatographo άβρόποδες usurpare licuat pro άβροδ πόδες, parum intelligimus. Sed et ex versu quodam ap. Dionys. H. de Comp. Verb. xxv. p. 390. ed. Schæf. hæc lectio firmari potest, Κοῦραι ἐλαφροπόδων ἴχνε ἀειράμεναι, ubi Schæf. edidit, έλαφεά ποδών. Sed έλαφραπόδων tenent Codd. Reg. i. et Colb. ' Dedi,' inquit Schæf., ' duemtis vocibus, ἐλαφρὰ ποδῶν. 'Ελαφρόπους Scottus in solo hoc Rhetoris loco reperit.' At poetæ forsan liberum filit έλαφρόπους e Cir. linguæ genio dicere pro έλαφρός πους, etiamsi ipse hoc compositum sibi finxisset." Editores Novi Thes. Gr. L. Pasc. in. p. 318. n. C. A. Lobeckio, qui humaniter mihi usum concessit Observationum suarum in Phrynichi Ecl. nondum editarum, longe aliter visum est. "Jam dudum Schneider. in L.ex.," inquit vir eruditissimus, "άβρὰ ποδῶν corrigendum esse vidit. Nihilo melius est ἀκρόπους pro ἄκρος πους, quod Schneider. citat e Pausan. (l. c.) Rectius hie, opinor, τον ἀκρόποδα e Palladii Comm. in Hippocr. L. i. de Fract. 285. B T. vii. Chart. p. 210. sect. 6. Foes. adtulisset: quanquam ne hoc quidem dubid caret, quam idem scriptor τον ακρον πόδα dicere soleat; sed de hoc non magnopere reluctabor, propter quas diximus causas. Pausaniam vere quum

videam semper eodom modo loquutam esse, ἄκροι πόδες, vi. 19. 201. vii. 31. 451. coll. ii. 11. 220. vii. 23. 322. vii. 25. 425. ix. 4. 13. haud satis intelligo, cur in hoc mo loco a consuetudine recessorit." Quod ad Pausaniæ locum attinet, recte statuit Lobeck. non solum propter rationem adductam, sed et quoniam prosago scriptori non liquit ἀκρόπους pro ἀκρος ποῦς insurpare. ᾿Ακρόπους chim, si unquam in Gr. liugua extaret, poetis solis concedendum esset. Δι ἀβροπόδων in Epigr. satis tueri videtur versus ille, Dionys. Halic. nobis servatus, in quo Codices ἐλαφραπόδων exhibent, pio ἐλαφραπόδων. Μπιπιί sane esset, si librationum incuria illic άβιοπόδων pro ἀβρὰ ποδῶν, hic antem ἐλαφροπόδων pro ἐλαφρὰ ποδῶν scriptum esset.

* ΛΩΤΟΦΑΓΊΑ, ΑΩΤΟΦΑΓΊΤΙΣ, * ΛΩΤΟΦΑΓΊΣ s. '* ΛΩΤΟ-ΦΟΡΟΣ νῆσος. "Stephanns," ut scripsi in Amounitatum harum parte prima (Class. Journ. xxxi. p. 116.), "msulam .tωτοφέρον vocari tradit; Strabo Λωτοφαγίτιν. Bodæns p. 326. a. e Strabone Theophrasto restituebat, Ty vyow ty .twtocayitibi, sed nihil mutandum; Schol, cum Platonis habet, Παρά την Λωτοφαγίαν νησον." In also articulo, cm titulum dedi, "On the Originality of Kuster's Discovery about the true Fo.ce of the Middle Verb," (Class. Journ. xxx. p. 309.) hwe addidi:—" For the words of the Schohast, Καὶ παρά την .1ωτοφαγίαν νησον, ανέχουσαν της χώςας, Petr. Olans Brondstedt (in Bredowir Epistt. Paris, p. 139.) would read, Kal παιά την Ιωτοξαγίδα νισον απέχουσαν της χώρας. .1ωτοφαγίδα he either wrote, or meant to write Λωτοφαγίτιδα, as in Strabo p. 834. Συνεχής ο έστιν ή μικρά Σύρτις, ην και Λωτοφαγίτιν I have I. c. observed that this island is by Theo-Σύρτιν λέγρυσι. phrastus called Awropayla, and that the accuracy of that reading, which Bodaus seems inclined to dispute, is placed beyond doubt by its being found in the Scholiast also. As to the other emendation ἀπέχουσαν, there can be no doubt of its correctness, as it is supported both by the obvious sense of the passage, and by the received text of Theophrastus." Fons emendationis utrusque Brondstedtianæ petendus esse videtur in Bastii Comment. Paleogr. p. 747.:—"Alpha et Ny legentes interdum confuderunt, quando litera impositam habens liucolam minus distincte scripta omninoque (ut e. c. A et Δ) ad errores giguendos prona esset. Sic in Schol. Plat. p. 186. ediderunt, Καὶ παρά την ΛωτοφαγίΛΝ νησον, ἀνέχουσαν τῆς χώρας κ.τ. λ. Sed Cod. 1807. unde hoc Scholmm sumtum est, dat Λωταφαγί AA. Vid. Tab. iii. num. 10. Porro pro 'AΝέχουσμν ex cod. Cod. scribendum 'AΠέχουσαν. In unciali scriptura tachygraphorum II facile habeas tam pro N, quam pro H." Sed virum doctum vocem Λωτοφαγίδα non suspectam habuisse, impense miror. . Ιωτοφαγίς enim e Grillinguæ genio a Αμποφάγος forman non potest. Ιώτοφάγος ό, που Λωτοφαγίς ή, sed Λωτοφαγίτις, quod ostendit Strabonis locus. Scribe igitur meo periculo in Schol. Platou.

REMARKS

On the Introductory Chapters of Moses.

No. I.

In perusing the introductory chapters of Moses, some remarks occur to me which have escaped all the commentators, and which

may seem worthy of a place in the Classical Journal.

In order fully to understand an ancient writer, it is absolutely necessary to have a complete view of the circumstances in which he was placed; and if this be true of all former authors, it must be particularly so in regard to the Jewish legislator, whose situation was so peculiar, and so remote from the apprehension of modern readers. Moses flourished in an age, in which false philosophy was taught, and Atheism systematically supported by men who cherished against the chosen people, and against Jehovah himself, all the insolence of national hatred, all the bigotry of polytheism, and all the subtleties of superior pretended wisdom. While the philosophers endeavoured to account for the formation of the world by vain hypotheses, for by natural causes, it was the leading object of Moses to assign the creation and government of the universe to one Intelligent Being, as its only real cause: and with this proposition he sets out, " In the beginning God created the heavens and the earth," as though he had said, " Other men who know not the true God, attempt to account for the world by saving that it is eternal, or that it began to exist by chance, or that its phenomena originated in natural causes by no means the appointment of a supreme intelligence? but these theolies are all vain, false, and absurd. The world, when it, began to exist, existed by the will and operation of God alone." And to guard his readers against the conclusion so generally insisted upon by the Autitheistic teachers, that the Creator was not a rational, conscious being, distinct from the works of nature, he hints that he was spiritual: "And the spirit of God moved on the face of the waters," that is, "God, who is a spirit, and not the same in nature with the heavens and the earth,"

Moreover, in order to impress on his readers a clear conception and a firm conviction of the existence of a Supreme Intelligent Principle, distinct from the works of his hands, he represents him not only as a creator when producing the world, but as a sovereign surveying the materials upon which he was going to work, calling them forth into existence by his mere will, and then examining, and approving of them as good. "And the spirit of God moved (i. e put himself in motion to survey the great abyss) along the surface of the waters: and God said, let there be light, and there was light: and God saw the light that it was good." And this representation is continued again and again in the sequel, till the whole work is finished.

Moses, in holding forth God as a sovereign, was naturally led to adopt the language, which a king usually adopts when, in reference perhaps to his combsellors or ministers, he calls himself we, though intending to designate no other than his own individual person, "And God said, let us make man in our image, and our highest, and let them have dominion over the fish of the sea, and over the fowls of the air, and over the cattle, and over all the earth."

The connexion clearly points out in what the image of God, after which man was made, consisted. It was the dominion which the universal sovereign gave him over the works of his hand. God made him king over other creatures; and the authority, which he thus bears, is a faint likeness of the absolute power which his creator has over nature.

The notion seems to have prevailed from very early times, that there existed in nature two opposite principles, one the source of all that is good, the other of whatever is evil, in the creation. To this notion the prophet Isafah is known to alkide: and in opposition to it, he represents Jehovah as the only God, as himself the cause of evil as well as of good—"I form the light and create darkness; I make peace and create evil: I the Lord do, all these things," chap. 45. 7. While the Good Principle from all eternity was thought to lead a life of inglorious ease and undisturbed enjoyment, the Bad gave vent to his eninty in the creation of matter, the supposed source of all evil natural and moral. The doctrine that the creator was an evil, imperfect Being, appears to

have prevailed even so early as the age of Moses. Indeed in the early periods of society, it was more likely to prevail than in subsequent periods: for then the evils of life, for want of those conveniences which the aits of civilization supply, were far more numerous than they are at present; and men judging of the Creator by such of his works as they observed and experienced, were led to conceive of him under a very different character from what we are taught to ascribe to him; and this conclusion was countenanced by the severity and apparent cruelty with which his power in an extraordinary manner was sometimes displayed—by the deloge which drowned the world—by the plagues inflicted on Egypt—by the destruction of Pharaoh and his host—by the extermination of the Canaanites—and in general by the seeming confinement of his favours and providence to one nation, and his neglect of all mankind besides. As the opinion that the Parent of the Universe was evil in his nature, and capricious in his operations, was not unknown to Moses, he could not have passed over it when representing the creation as the production of Jehovah. Accordingly he holds him forth as inspecting his works, and pronouncing them to be good -" and God saw that it was good;" and this declaration be repeats seven times in the course of the chapter. Surely such a repetition would not have been made, had there not been a necessity for it: and nothing could have rendered it necessary, but the fact now supposed, that there were men who inculcated that the works of God were not all good.

The early Christian fathers, following Philo and Josephus, were of opinion that Plato was acquainted with the writings of Moses. This opinion is not improbable, for Plato had been in Egypt; where he might have learnt the Mosaic doctrine through the medium of a Circk translation; and he certainly appears, in opposition to the Egyptian philosophers, to have sided with the Jewish Lawgiver in the notion that the creator was a good and benevolent Being: for he represents the universe as the work of the Supreme God: and he styles him on many occasions, δ ἀγαθὸς, as if he intended to repel those who gave him the character of evil. In his Timæus there is one passage particularly worthy of notice: ἄς, τε κίνηθεν αὐτὸ καὶ ζῶν ἐνεχόησε, τῶν αίδίων θεῶν γενόμενον ἄγαλμα, ὁ γέννησες πατὴρ ἡγάσθη τε, καὶ εὐφράνθεις ἔτι δὴ μεᾶλλον ὅμοιον πςὸς τὸ παράδινμα ἐπενενόησεν ἀπεργάσασθαι.

Τίμι, p. 480.

now become the image of the eternal gods, the father who produced it was glad, and being delighted, he meditated to render it still more like the model of his own perfections." The spirit, if not the language, here displayed, is extremely like that of Moses, Gen. i. 31: "And God saw every thing that he had made, and behold it was very good."

OBSERVATIONS

On the 29th Ode, 3d Book of Horace.

THE Alcaic Ode of invitation to Mecanas, I consider as one of the finest efforts of the Muse of Horace; and should be exceedingly glad to see the only stanza which labours under any obscurity, cleared from all reasonable dispute.

In the Explicationes veterum aliquot Auctorum (p. 258=267) Markland gives the following conjecture of an ingenious friend.

III Carm. xix. 5. Ita hunc locum legebat et distinguebat, int pridem forte nosti, Amicus Noster, capitalis ingenii Vir, Nicolaus Hardinge, ὁ μακαρίτης,

· eripe to moi a, Ut semper-udum Tibur, et Æsula Declive contempleris arvum, &c.

Quo nihil verius puto: ad Tibur entai invitat Macchatem Horatius. Vulgo, eripe te mora: Ne semper udum Tibur, &c.

Dr. Parr with his usual warmth and energy has pronounced this to be "n noble emendation;" and the reading is adopted in the text of Mr. Kidd's late edition of Horace.

I am duely aware of the maxim, melior conditio possidentis; and must candidly allow, in general, that some probable account should be given, how the common lection stole in, before it be ejected to make room for an apparent stranger. To this however, in very strong cases like the present, one may venture to plead, Nullum tempus occurrit regi.

For observe the absurdity of the vulgar text. Ne, Neu, or Nec, whichever you take, must naturally place semper in construction with contemplere, and of course represent the vigilant minister of Augustus as gazing for ever out of the windows of his Esquiline Palace, like the veriest idler in Rome.

But to the admission of the conjecture made by Markland's friend Hardinge, and of Markland's explication in support of ν , two facts are quite necessary, which may not be gratuitously assumed.

1. The commentators boldly enough assert, that Mecanas and enjoy from the Esqu'line hill the very prospect of Tabia, of Æsula, and of the high grounds of Tusculum, which the common interpretation of the passage requires.

I should like therefore to know, on the other hand, whether from Horace's house, if he had one, in the neighbourhood of Tibur, the scenes of Æsula and of Tusculum were clearly in the range of that prospect also: that is, are Tivoli and Frascati within sight of each other?

ii. But had Horace such a house to ask his noble guest to?

When Mr. Bradstreet was indulging himself in a delightful pilgrimage from Rome by the way of Tivoli to the valley of Lacenza, the Digentia of other days; he seems to have concluded with the Abbé Dominico (p. 19.) that Horace had but one Villa, and in the Sabme country, because the poet never mentions having any property or demesne, but that one.

This conclusion, however plausible, does not command my

British Critic. March 1794. p. 304. = Class. Journal, No. XI. p. 99.

passages, can hardly fail, I'think, to discover that Tibur was not like Praneste the mere æstivæ deliciæ to our poet, nor like distant Tarentum dearly loved but seldom visited, nor yet like Baræ resorted to for its chimate or its baths, but a favorite spot of regular and usual residence. In his Epistles, when he apologises for his long absence from Rome, Tarentum is mentioned, but Tibur is meant.

viv. 44, 5. Mihi jam non regiu Roma, Sed vacuum Tibur placet, aut imbelle Tarentum.

or if he accase himself of whimsical humour, the whim oscillates betweet Rome and Tibur.

viii. 19. Roma Tibur amem ventosus, Tibure Romam.

In the 1vth book of Odes, the matter strikes very palpably. Tibur was at that time the scene of his poetical labours,

n. 27 · · 32 - Ego, apis Matine
More modoque
Grata carpentis thyma per laborem
Plurimum, circa nemns uvidique
Liburis regas operosa parvus
Carmina fingo.

Nay, more than this: the woods and the waters of Tibur fashioned and inspired the soul of the poet.

111. 10. 12. Sed qua Tibur aqua sertile prafluunt,
Et spissa nemorum coma,
Fingent Folio carmine nobilem.

Et dubitamus adhuc? Take then the undisputed authority of Suctionis at once. Vixit pharimum in secessa ruris sui Subini aut Tiburtini; domasque ejus ostenditur circa Tiburni luculum—that Tiburni lucus, (Carmin. 1. vn. 13) and the enchanting scenes viewed from it; which Horace on his way to the Sabine valley had often halted a day to admire, before he realised that invitation to Mecanas so beautifully recommended by his moral muse in the Ode now before us.

Plerumque grate divitibus vices Mundaque parvo sub lare pauperum Cana, sine aulais et ostro, , Sollicitam explicuere frontem.

VOL. XVI.

23

P.S. It may not be improper to state, that Mr. Bradstreet Sabine Farm was published only in 1810, his excursion from Rome to Liceuza took place in 1795.

Mr. Forsyth, in the tenth year of his captivity at Valenciennes, contrived to give an English publication to those masterly Remarks made in Italy during the year 1802 and 1803.

The passages, quoted below from his book, were certainly not at hand, nor yet in memory, when the above letter was drawn up. Distinguishing by difference of type what appears to me to be principally erroneous, with very little comment beside, I shall now leave the whole question to the intelligent reader.

In settling the dates of the works of Horace, on which dates the present discussion very much hinges, Dr. Bentley refers to Suetonius's Life of the poet as decisive anthority: so much for the point of judgment, on which Mr. Forsyth takes the other side.

Luckily, however, from the hill of Tivoli, Mr. Forsyth tells us, as matter of course, that he saw Frascati in the distance: and so much for the point of fact, which, for want of an eye witness to appeal to, I have tunidly and doubtfully proposed.

Pp. 271, 2. "Turning round the woody hill of Catilus, we passed by two convents where two great poets are said to have resided. Catullus's villa is ascertained by his own minute description of the place, by excavated marbles, and by the popular name of Trugha; but it is not so evident, that Horace possessed any house at Tivoli. He might muse occasionally at Tibur, just as he studied history" [read Homei] "at Praneste. he might admire this vetreat, just as he admires that of Turentum. But the Sabme farm, where the well, and the runed fane, and every little object around, has that importance which a poet would naturally give to his home, has nothing to represent it within twelve miles of Tivoli" [No one says otherwise.] "Horace calls that farm his only possession" [in the sense of estate]; "and surely we may behave the past himself rather than a biographer whose very name is dispinted."

P. 275. "The half of Twoli is all over picture. The town, the villas, the rains, the rocks, the cascades, in the fore-ground; the Sabine hills, the three Monticelli, Solacte, Frascati, the Cam-

pagna, and Romes in the distance: these form a succession of landscapes superior, in the delight produced, to the righest cabnet of Claude's. Tivoli cannot be described: no true portrait of it exists: all views alter and embellish it: they are poetical translations of the matchless original."

Ut semper-udinii Tibur et Esida Declive contempleris arvinii, et Telegoni juga Parricida,

ROMAN INSCRIPTION AT TARRAGONA.

Multa renuscentur, quæ jam cecidere .- Hon.

AGREFABLY with my promise, I send you a copy of a Roman inscription lately dug up at Tarragona. It was discovered, along with upwards of forty others, in consequence of a battery having been thrown up by our soldiers about three hundred vards from the walls of that place. Other, and more considerable, relics of Roman fabrication and design, were found there at the same time. The chief of these were, a Mosaic or tessellated pavement, the remains of a circus and ampitheatre, and an aqueduct, which is in a very good state of preservation. This information, along with the inscription, was given me by a particular friend, who received it from a near relation, resident some little time ago at Tarragona. When I last saw him, he had promised the inscription to another publication; and on this account I found some difficulty in persuading him to give me the use of it for the Classical Journal. Whether it has appeared any where else, or not, I am unable to say. Be that as it may, the insertion of it in your Journal will not be the means of taking up any superabundance of The slab is in the form of a rectangular parallelogram, whose beight is thirty-seven inches, and base twenty-five.

388 An important Passage of Photius corrected.

For PERPERNÆ we ought perhaps to read FERPÉNNÆ. Mention is made of Romans of this name by Livy, Plutarch, Paterculus, Valerius Maximus, and others. It is very likely that the mistake may exist upon the stone itself, as it is a fact well-known that the ancient letter-cutters were frequently very illiterate men. Consult, among others, who have treated on this subject, Cellarius, in his Orthographia Latina. We find on record the name of M. Perpenna, who was Consul with C. Claudius Pulcer, in the years 624 and 662 from the building of the city. It may be worth the while to observe that Amsworth, in giving his name on the first occasion, styles him Perperna; which may have been occasioned by the circumstance of its being so read in some editions of Livy. The inscription, at full, runs thus: LUCIO PERPENNÆ NUMISIANO SEXTUM VIRO AUGUS TALI TIBERIUS CLAUDIUS AMIANTUS AMICO OPTIMO The name of the man who put up the stone, seems to be of Greek origin (ἀμίαντος). He was probably a naturalised Greek. "Angustales, qui primos ordines in bello ducebant." Veget, de Re Militari.

N. A.

AN IMPORTANT PASSAGE OF PHOTIUS CORRECTED.

The following passage of the learned Photous has engaged a considerable portion of attention amongst learned men: and a few remarks upon it may deserve a place in the Classical Journal. Speaking of Justus of Tiberias, the rival of Josephus, he says, Bibliothec. Cod. 33. *Αρχεται τῆς Ιστορίας ἀπὸ Μωσέω

ελευτῆς Αγρίππα, του έβδόμου μὲν ἀπὸ τῆς οἰκίας Ηρ ῆς Ἰουδαίων βασιλεῦσιν' δς παρέλαβε μὲν τὴν ἀρχὴν Επὶ Νέρωνος, καὶ ἔτι μᾶλλον ἐπὶ Οὐεσπασιανοῦ, τ

τρίτω Τραιανό, οδ καὶ ἡ ίστορία κατέληξεν.

In this passage Agrippa the younger is represented as having lived to the find year of Trajan; and Justus as having continued his history to that period. Now Josephus, in his life, notices this history of his rival; and it appears very evident that Agrippa had died at least ten years before Trajan began to reign. His words are the following. Εὶ δὲ θαρρεῖς ἀμεινον ἀπάντων συγγεγραφέναι, διὰ τί, ζώντων Οὐεσπασιανοῦ καὶ Τιτοῦ τῶν ἀὐτοκρατόρων τιῦ πολέμου γενομένων, καὶ βασιλέως ἀγρίπτα περιόντις ἐτι, καὶ τῶν ἐκγένους αὐτοῦ πάντων, ἀνὸρῶν τῆς Ἑλληνικῆς παιδείας ἐπὶ πλεῖστον ἡκόντων, τὴν ἱο τορίαν ἐνα ἔφερες εἰς μέτον; πρὸ γὰρ εἴκοσιν ἐτῶν εἶχες γεγραμμένην, καὶ παρ εἰκότων ἔμελ κες τῆς ἀκριβείας τὴν μαρτυσίαν ἀπιφέρεσθαι. νῦν δ' ὅτε ἐκεινοι μὲν củx ἔτι εἰσὶ μεθ' ἡμών; ἐλεγχθῆναι δ' οὐ νομίζεις, τεθάρρηκας Josephi Vita. §. 05. "It you are contident that you have related these events better than any other writer, how came, you not to bring

your narrative before the public, while Vespasian and Titus, the generals in chief of the war, and while Agrippa and his kindred, men extensively versed in the literature of Greece, were yet among the living. For you withheld your history above twenty years, thus declining the testimony of all those, who from their own knowledge were able to sanction its fiuth. But now, while they are no more among the living, you have ventured to publish it, as being no longer hable to be refuted."

At the close of his Antiquities Josephus bespeaks the indulgence of his readers for amexing a short memoir of his own life and family. This memoir, therefore, is but an Appendix of the Jewish Antiquities, composed and published at the same time with that immortal production; and he is express in declaring that he finished it the 13th year of Domitian, about five and twenty years after the destruction of Jerusalem, or the close of the Jewish War. Now it is clear from the above extract that Agrippa lived about twenty years after the same event. For while Vespasian, Time, Agrippa, and his kindred were alive, Justus declined publishing his bistory, and suppressed it on this account above twenty years.

Thus, the assertion of Photius, as the language now stands, is grossly erroneous but his text is assuredly corrupted, as it is extremely approbable that a writer so learned and accurate as Photius could have been guilty of so great arblander. And it is remarkable that the change of one letter in the text will give the

whole a different meaning.

The title of this work of Justus was "The Chronology of the kings of Judah." The writer begins with Moses, who was virtually, though not nominally, a king, and ends with Agrippa, the last king of the Jews. αρχεται της ιστορίας από Μωσέως, καταλήγει ο έως τελευτής 'Αγρίππα. The last clause is not Greek, nor can a corresponding expression be sense in any language, " he ceases so far as the death," or, " he ends until the death of Agrippa." The title shows that the principal object of Justus was to ascertain, and connerate the several Jewish kings, in connexion with the leading events of their reign; and the term appropriate to him as a chronologist, was καταλέγω, " He began his history from Moses, and he m succession numbers the kings of Judah till the death of Agrippa the last of them." His history, thus far finished, he published after the death of Agrippa. and to this publication Josephus refersa-But it does not follow that, as he lived some years longer, he did_ not continue his history of the Jews; his purpose, possibly, being to publish an annual account of their state and sufferings under the Roman emperors. It is observable, moneover, that where Photius speaks of Justus he uses the present tense, as speaking of a history then extant, but employs a past tense, when speaking of Agrippa. It is natural, therefore, to refer τελευτά, not to Agrippa, but to Justus himself. The whole passage will then stand thus: "He begins his history with Moses, and numbers the kings to the death of Agrippa, the seventh that reigned in the family of Herod, and the last that ruled over the Jews, having received his kingdom under Claudius, and angmented it under Nero, and still more amply under Vespasian; he dies in the third year of Trajan, where his history terminates." The last clause, "where history terminates," makes it evident that Photius meant the author, when he used the verb talsuta : and this renders the whole clear in itself, and consistent with truth.

Now, it is surprising that many of the learned, such as Scaliger, Noldius, Grotius, Hutson, and Whiston, instead of sifting the supposed assertion of Photius, have received it as true, and were hence thrown upon the most improbable conjectures respecting the time in which the works of Josephus appeared. One of these was that the Epaphroihtus, to whom he dedicates his Antiquities, was not the secretary of Nero mentioned by Snetonius and Dion, but another who flourished under Trajan. In an early number of the Classical Journal I have shown that this same Epaphroditus, who was also the master of Epictetus, was an illustrious convert to the Christian faith. I will shortly recapitulate the circumstances which prove this amportant fact.

From Sactonius and Dion Cassius it seems probable that Epaphroditus was a believer: for both these join his death with that of Clemens, who suffered for his conversion. [Suct. c. 14, 19, Dion. hb. 77. 14] I rom Josephus we might also conclude that he was a convert to the Jewish Institutions, as the gospel was then called. The licathens who rejected Christianity, rejected also with affected contempt the true history of the Jews, and adopted with avidity the falsehoods propagated by Apion and others respecting their origin. Nor can we find a criterion by which we can ascertain with more probability the feelings of a heathen respecting Christ, than the part he took with regard to the history of the Jews. All the enemies of Jesus adopted the expedient of calumnating his nation; while those only, who were favorable to him and his cause, wished to know the truth. On this side of the question we see Epaphroditus firmly enlisted. For Josephus, mear the close of his work, thus writes, " To thee, Eparhroditus, who lovest the truth, and to ... those who, like thee, wish to know our laws and nations, I dedicate .this book."

The apostle Paul, writing from Rome, Phil. i. 4. declares that his bonds in Christ were made known in the whole patace, and he presently mentions Epaphroditus by name, as one who had hazarded his life in the service of Christ. And here the name, the time, the place serve to identify the friend of the apostle with the patron of Josephus.

The words of the Apostle, though not a studied encomium, represent Epaphroditus as distinguished by succerity, firmness, and magnanimity; as having not only impaired his health, but risked his very existence, by attempting to shield his illustrious friend from the bigotry and malice of his imperial master; and Josephus affirms of him, that "he displayed a mind wonderfully powerful, and an inflexible aitherence to virtue;" meaning no doubt by "virtue," that high integrity, that superiority to the world, and even to the fear of death, with which the Gospel inspired its early votaries.

In the first and second centuries, the notion seems to have been general, that a convert from Heathenism ought immediately to relinquish his station in society, especially if engaged in pursuits imder the Emperor, as inconsistent with the virtues of Christianity. Clement acted up to this opinion, and his seclusion brought upon him the imputation of "the most contemptible mertness." Epaphroditus followed an opposite course; and he thus incorred the suspicion and displeasure of the church at Philippi, where they " heard that he was infirm," meaning, not that he was sick in body, but infirm in the faith, vid. Rom. iv. 19. The Apostle takes up the term "infirm," and, agreeably to his usual manner, applies it m a new and energetic sense, to set forth his infiguration and zeal in the cause of his dome master. " For he was indeed infirm, so as to be near death.' His infirmity was only an impaired health, arising from fatigue and anxiety, and a noble determination to meet death in the service of Christ. But Providence interposed and averted the fury of the Emperor; and he was thus restored to Le the comfort and support of the Apostle. Epaphroditus naturally wished to visit the Christians at Phihppi, thus hoping to dissipate their prejudices against him. With this wish the Apostle concurred: and having delegated him, he calls upon them to receive him as a man of deeds, and not a man of mere profession in Cluist.

The language of our Apostle, when speaking of Epaphroditus, is deduced by association from his occupation under Nero; and his object was to do away the odinmattached to those names Ly applying them in a secondary, metaphorical sense to his character as a believer in Christ. From being a soldier under Nero, St. Paul styles him "my fellow-soldier." In reference to his being a minister of, or attendant on, the Emperor, he calls him "minister of my wants." As "the slave of Nero," a reproach his conduct might have brought upon him even from his mistaken friends, the Apostle in his letter to the Colossians faither designates him as the slave of Christ," meaning, that while he appeared as the servant of a tyrant, he was really the servant of that divine Master, whose

service was perfect freedom. As a minister of State, Epaphroditus possessed authority and wealth, and he nobly employed them in supplying the necessaties, and protecting the person, of his illustrious friend. "For the work of Christ he was near death, having hazarded his life to fill up the deficiency of your service toward me." Some of the believers at Philippi had doubtless the means of relieving his wants, and perhaps by their influence and connexions at Rome materially to aid the Apostle. But they neglected them duty, at least in part: and the Apostle delicately reminds them that the man whom they disparaged for not holding forth his profession to the world, had the ment to supply their neglect in both these respects.

STELOCOPOS.

INSCRIPTION

ON THE TOMB OF ARRIAN.

Through the medium of your Journal, permit me to gratify a foreign correspondent, and an English antiquary, whose curiosity respecting "The Tomb of Arrian" seems much excited. That I claimed the discovery of this monument, was announced in the Seventh Volume of your work, (No. XIII. April, 1813, p. 293.) and in other periodical publications. For the satisfaction of those gentlemen above-mentioned, it will, I trust the sufficient to give, on this occasion, a copy of the inscription, which expresses that,—"Arrian the son of Dædalsus died in the forty-eighth year of his age,"—and concludes with the usual valediction:—

APPIANOS MILAASOY MILAASOY MILAANIPE *

I must reserve for the account of my Travels, (now far advanced through the press) an engraved delineation, and a fuller description of this monument; which we are justified, perhaps, in attributing to the eminent writer Arrian; as it is situate not very far from Nacomedia, his birth-place, in Bithynia; a country where, as it appears from Strabo, (Lib. XII.) Memnon (in Photii Biblioth.) and others, Δοίδα νσος οτ Δυσαλσος was an ancient name of some celebrity.

December, 1817.

Dum, corvi veluti, grex alius strepint."

* Epitaphium in Filium, Ulmo Inscriptum.

Hanc Ego, quam, felix annis melionbus, Ulmum Ipse manu sevi, Tibi, dilectissime Fili.
Consecto in æternum, Gulielmeç vocabitur arbos Hæc tua, servabitque tuum per sæcula nomen.
Te, Generosc Puer, nil muneris lujus egentem, Fe, jam perfunctum Belli Vitæque labore, Respevit Deus, et cælestibus intulit oris—Me tamen afflictum, sie consolabitur ægrum Hoc tibi, quod solvo, quanquam leve, munus amoris. Quinetiam assiduè huc veniam, neglectaque vitæ, De te, care Puer, meditando, tempora ducam.

Sæpe tuam recolens formam, dulcesque loquelas, Dictaque tam sacro et sapienti corde profecta, Quàm festiva quidem, et dulci condita lepore— Et Te, qui nostris quandoque, accesseris hæres Sedibns, hoc oro: mæsti reverere parentis, Nec tu sperue preces, quos hâc super arbore fundo— Sit tibi non invisa—sit inviolata securi— Et quantum Natura sinat, crescat monumentum Egregn Juvenis, qui sævát est morte pereintus. Fortier ob patriam pugnando—Sic tibi constans Sit Fortuna Domus—sit nulli obnovia damno— Nec videas unquam jucundi funcia Nati!

H.C.

The following verses were written at Winchester School by one of the most learned Prelates of the Church of England and Ireland.

Equus Bellotor, vid. Johum, c. xxxix.

Tune ammos fortes validumque, pusible, dedisti, Robur Equo rapidosque pedes—atque ardua colla, Fulminibus vestita, habilique micautta fato? En Belli loricam indutus et arma—superbus Pondere terribih, graditur tundens grave terram Alternis pedibus, nec territat obvia messis Cuspidis instantis, clypeorum aut fulgidus horror. Et nunc ignescens nares, et fræna recusans Fracta, freunt dirum, et venientes provocat hostes Himutu, absentesque iteraus terit ingula turmas. At simul optatum signum bibit auribus æris, Et litui sonuere, infit vix credulus, hah! hah! Fervere time artus—tune tendere terra retroisum, Inque latus concussa strepunt sibi suaviter arma—

Quin, nanc plus fidens animi, jam robore noto, Mordet human indignans—renuit terrore moveri, Et gestit captare fugæque metusque ninlatum, Clamoremque, minas ducum, dirasque cadentumOn leaving Sharpham Park, for Ireland, at a period of much political apprehension in that country.

CARA Domus, valeas! carique valete Penates,
Editus inide inihi connubialis amoi!
Seu vis me rapiat truculenta rebellibus arnus,
Seu sortem expectet tuta senecta suam,
Elis Laribus—canit augurium prasaga mali mens—
Pes meus his Laribus, non rediturus, abit!
O pia spes—O amanda! tuum est optare, propinquos
Rutsus in aterna posse coire Domo.
Purior aetherios ubi pascet spiritus artus,
Nostraque nobilior corda beabit Amoi.

1d Uxorem Suam, in Insula Sanctæ Vincentia commoranie. Sibi în Tortofa desideratê expectatani.

Literary Intelligence.

JUST PUBLISHED.

CLASSICAL.

Nos. 111. and IV. of the New and Improved Edition of STEPHENS' GREEK THESAURUS are just published. Pr. 11.3s. each, large paper 21. 10s. To be completed in about 24 Numbers. Of this production we cannot enter into particulars till it is completed. In Mr. DIBDIN's most interesting and superb work, the Bibliographical Decameron, we find the following observations on the new edition of Stephens, which we hope may be generally read and felt by our senators as well as the subscribers to the work.

"The undertaking is ardnous in the extreme, and perhaps not a little perilous: yet let us admire the zeal, and love of ancient lore, which could have matured, and carried into execution, a project so vast, so expensive, and requiring such constant, innemitting, and (I had almost said,) internunable labour. I address myself to the caudid, the experienced, and the liberal; not to those, who, previous to the publication of the first number, were sharpening their critical knives, and preparing other instruments of literary torture, whereby they right inflict a severe wound, and cause premature death to the undertaking! English critics, I trust, like English soldiers and sailors, love fairer play than this. Nor can such attempts, after all, damp the ardour, or slacken the exertions, of those to whose conduct this 'monumentum are perennius' is entrusted. Let us tell an interesting and unsophisticated tale.

" A new Edition of the Greek Thesaurus of II. Stephen the younger, must necessarily, in any shape, be a tremendous undertaking; especially too, when one thinks of the multiplicity of lexicographical and critical knowledge which has pervaded the classical world, since the first appearance of that wonderful performance. Only to give an impulse, or encouragement to the plan—only to bring the vessel to the water's edge, as it were—required spirit, strength, and no ordinary assistance. In letters, excular notes, prospectuses, &c. announcing the nature and extent of it, it cost the proprietors of the work not less than 1,500%. This was surely bold enough: for till seven hundred subscribers were subscribed, its progress would be uncertain, and the loss sufficiently decisive. However, the plan ' grew,' and the subscribers multiplied; and the names of not fewer than nine hundred and eighty-five [1086] of them graced the covering of the first number. Such a number, to such a work, is, I believe, without a precedent: and well inight LORD GRENVILLE, the Chanceller of the University of Oxford, express a pleasurable pride in redeiving the homage of the Dedication of the new Thesaurus to HIMSELE. That Nobleman's letter to the Printer, upon the occasion of which we are speaking, does equal honor to his head and heart. Now comes the glory of the design. All attempts which had been made towards a new edition of Stephens' Thesaurus, in Germany, Russia, Fiance, and Denmark, have not only been rendered abortive; but the materials for it, collected in those places, have been almost voluntarily, as well as absolutely, poured into the capacious reservoir of A. J. Valpy.

"The manner in which this new edition is given to the public, need not be specifically mentioned. All the classical world are aware of it; but, for comelness and proportion, the nicer collector will betake himself to the large paper. In the small paper, the text looks abundant and honest to excess. It was the intention of Mr. Valpy to have struck off three copies upon vellum, at 300 guineas each copy; but the poisoning influence of that recent, hash, and ruthless act of Parhament, respecting literary property, which gave one copy of the best kind to the British Museum, (the least pernicions feature in such act,) diverted his intentions."

The varancies yet open have been occasioned by the decease of some of the Subscribers. The price to such as were not on the original list has been already raised; and the Editors, according to the advertisement to No. 111., mean, it should seem, shoully to raise it again. We should recommend all public Libraries, in particular, to subscribe before the opportunity is lost, as only a sufficient miniber of copies have been printed to cover the subscription.

Prospectus of an edition of Leo Disconus, a Byzantine Historian hitherto unpublished.

The history of Leo Diaconns is an important supplement to the collection of Byzantine Historians. Father Combess had accordingly meditated an edition,* and even put it 50 the press, ** but died before he could execute his project; so that Leo's work is still unpublished. It is preserved among the manuscripts of the King's library at Paris, and comprises the history of the reigns of Romanus the younger, Nicephorus Phocas, and John Zimisces (A. D. 959-975). It gives many details relating to the war which Swatoslaus, Grand-Duke of Russia, carried on against the Greeks about the year 971.

The mumicence of H. E. Count ROMANZOFF, Grand-Chancellor of Russia, and the immediate pationage of the French government, have enabled M. HASF, professor of Modern Greek at the Ecole speciale et Royale des langues Orientales at Paris, to undertake the publication of Leo's history. The book is nearly printed. It will form one volume, which will also contain philological and explanatory notes, and the following inedited works;

1. A treatise on Tactics, coinposed by order of the Emperor Nicephorus Phocas. (***)

^(*) Si quando pace lenius aspirante.—Regia Lupura historia Buzantina pane necessario supplemento, cum Leone Diacono el Michaele Psello, regium vere multiplici titulo argumentum, juris publici regia munificentia faciat. Combess. nons ad auctarium noviss. Bibliothecæ Græcor. Patr. I. 545. B.

^(**) Que Leo Diaconus refert in historia, cujus pars typis Regiis jam edita est. Le Quien Orient. Christian. I. 255. D.

^(***) See Fabrica Biblioth. grac. edit. Harles. VII. 677. C.

2. A fragment of the history of Joannes Epiphaniensis on the wais of the Persians and Romans, from a Vatican manuscript. (*)

3. The Greek text of the letter of Theodosins Grammaticus on the taking of Syracuse by the Saracens, published, but only

in a Latin translution, by Pirro (**) and Discauge. (***)

The volume wilk be printed at the Royal press at Paris, and will make about 300 pages in folio, in two columns, one containing the Greek text, and the other a Latin translation. The size, the type, and most of the vignettes, will be the same as in the former volumes of the Byzantine Historians. Some new vignettes will exhibit inedited reliewos and goins, relating to the history of Constantinople.

The price of the volume, which completes the Byzanune collection, will be 44 francs, or 40 francs to subscribers, to be paid on receiving the book. The whole will be printed by the end of 1817.

Subscriptions taken in by Mossrs, de Bine, Booksellers to the King, and to the King's library, Paris, Rue Serpente, No. 7. Treuttel and Wintz, Paris, Rue de Bourbon No. 18, and No. 30, Soho Square, London.

N. B. The Postage of Letters must be paid.

A Neat Edition of the GREEK SEPTPAGINT, in one Vehine 8vo., the Text is taken from the Oxford Edition of Bos. It may be had in 2 Volumes if preferred. Price 11. 5s.

CORNILIUS NEEGS; with English Notes and Questions.

By the Rev. C. BRADLLY, M. A. Price 3s. od. bound.

The NICOMACHEAN EIRICS, the RHETORIC, and the POETIC, of ARISTOTLE, translated by Mr. THOMAS TAYLOR. 2 Vols. 8vo. 18s. bds.

A Concise GRAMMAR of the ROMAIC, or MODERN GREEK LANGUAGE, with PHRASES, and DIALOGUES on the most familiar subjects, compiled by Di. Robertson, after a residence of some years in the Ionian Islands. Price 4s. 6d. 12mo. bds.

CRLUZER of Heidelburg has published a German correspondence, which passed between him and HERMANN, respecting the mythology of Homer and Hesiod. Both men ranking so deservedly high on the continent, and, both being notorious antagonists of Voss, this little Opusculum will exette much interest among the foreign scholars.

Nouveaux extraits tles Vies de Plutarque. Texte Grec, snivi d'un Vocabulaire donnant le sens de tous les mots qui y sont contenvs; Par C. A. F. Fremion. Paris 1817, 12mo. pag. 84.

^(**) Sicilia Sacra; T. I. p. 613-7. (***) Ad Sinara Annalcs, II. 87-93.

Ang. Maro. Additur sextus liker et pars octavi cum multavocum et versuum varietate. Midiolani 1817. 8vo., pagg. 56.

A Brief Outline of air examination of the Song of Solomon: in which many beautiful Prophecies contained in that Inspired Book of Holy Scripture are considered and explained with remarks, critical and expository. By William Davidson, Esq. 8vo. Pr. 12s.

NOTES TO CORRESPONDENTS.

We shall give in our next Col. Leake's list of Greek Proverbs, as appended to his Researches in Greece.

Mr. M.'s Essay on Pastoral Poets, in our next.

Professor Dunbar's Treatise on the particle &v is postponed to No. 33.

Mr. J.'s Series of papers to prove that Philo and Josephus are Christian writers, will have an early insertion. Also his papers on the Greek Tragedians—and papers on Biblical Criticism.

II. This Ode in obtum Caroletta Augusta contains many good lines; but we would recommend to his consideration the rules for Alcaics, given in the 22d and sonte subsequent Nos. of the Classical Journal. The perusal of those rules would have obviated the objections, which we are obliged to make to his veises.

Mr. D's learned and magnious letters on the Cornish dialect,

and on collateral subjects, will be duly honored.

L'article de C. N sera mis à la tête du No. prochain. Un accident en a jusqu'ici empèché l'impression.

ERRATUM.

No. XXIX. p. 180. l. 26. read άριστοτόπειος.

this day is published,

In Octavo, with the Plates separate in Folio, 11.8s.

TOPOGRAPHY

ILLUSTRATIVE OF THE BAFFLE OF PLATEA;
